Applications to newly seeded turf made sooner than SC on these grasses only when removal of these grasses is desired. 200 SC in the spring or fall to these grasses will control labeled weeds and allow low maintenance turf to develop. A repeat application can be made but not to exceed a total amount of 10 fl oz per acre per year.

Esplanade 200 SC can inhibit the emergence of seed and damage newly emerged seedlings. Seeding into turf treated with Esplanade 200 SC should be delayed until at least 8 months after application.

### Preemergent Herbicide for the Control of Annual Grasses and Select Broadleaf Weeds

**Active Ingredient:**
- Esplanade 200 SC contains 1.67 pounds of indaziflam per gallon.

**Other Ingredients:**
- 80.95%
- Total: 100.00%

**EPA Reg. No.**:
- 432-1516

**Precautionary Statements:**
- KEEP OUT OF REACH OF CHILDREN
- For PRODUCT USE Information Call 1-800-331-2867
- Produced by Bayer Environmental Science

### Preemergent Herbicide

**GROUP 29 HERBICIDE**

**FIRST AID AND TOXICITY:**
- See label for first aid instructions.
- **Poisoning Symptoms:** See product label for symptoms and first aid instructions.

**Storage and Disposal Instructions:**
- Store in a cool, dry place.
- **Spills:** Clean up spills from impervious surfaces with absorbent material. Dispose of contaminated material as hazardous waste.

**Atmospheric Dispersion:**
- Good dispersion characteristics in the atmosphere.
- **Volatilization:** Volatilization is not expected under normal use conditions.

**Toxicological Properties:**
- **Toxicity:** Low acute, low chronic toxicity. No significant ecotoxicity based on short term and chronic tests. No mutagenic effects in animal and microbial tests. Non-teratogenic, non-carcinogenic, non-teratogenic.
FIRST AID

If swallowed: Do not induce vomiting. Call a Poison Control Center or doctor for further treatment advice.

If in eyes: Rinse eyes immediately with 2-3 liters of water for at least 15 minutes, holding eye open with fingers. Get medical attention immediately.

If on skin: Wash with soap and water or other suitable cleanser. Get medical attention immediately if irritation develops.

If on clothes: Remove clothes immediately. Wash soiled clothes before reuse. Get medical attention immediately if irritation develops.

If on skin and in eyes at the same time: Get medical attention immediately.

If inhaled: Get medical attention immediately. Remove sufferer from area of contamination and into fresh air. Provide artificial respiration if necessary.

SPECIAL TOXICITY INFORMATION

Eye Irritation

Reproduction and Developmental Toxicity

Neurotoxicity

Carcinogenesis

Hazardous Substance Information

Chemical Name: Esplanade 200 SC

Use Code: 2.5 gal

99966857A

Use Group: A

Commercial Mixtures: None

N-Nitrosamines: None

Form: Liquid

PH: 2.5-4

Odor: Sharp, pungent, mustard

SIN: M, Q, U, B

RTECS: UH0478000

Hazardous date: 5/14/12

100966857A

Hazardous waste: No

Hazardous waste number: None

Toxicity classification: None

Toxicity code: None

Regulatory classification: None

Safe storage: Under controlled conditions, away from incompatible materials, at temperatures below 104°F. Store in original container or suitable container to prevent contamination from other materials.

compatibility testing with other pesticides.

Esplanade 200SC may be applied by: ground equipment only.

to ensure that the product is not applied in a manner that will contact workers during application.

uniform application is essential for satisfactory weed control. Avoid overlap. Shut off spray boom while starting, turning, slowing or stopping to avoid off-target application.

Adequate application pressure, orientation, spray volume, etc., in order to minimize drift and optimize coverage and control.

Resistance Management Guidelines

Resistance management guidelines for Esplanade 200SC: Resistance management guidelines for Esplanade 200SC are recommended for use according to the following guidelines.

- Avoid making applications when spray particles may be carried by air currents to areas where sensitive crops and plants are growing. Many factors influence spray drift potential including droplet size, wind speed, temperature, humidity, spray volume, spray pressure, spray equipment, and weather. These factors can be influenced by the choices made by the applicator.

- Do not make applications when spray reaches or exceeds 15 mts per hour. In general, the higher the speed of spray, the greater the likelihood of drift.

- Avoid application to areas that are not uniformly sprayed. Uniform application is essential for satisfactory weed control. Avoid overlap. Shut off spray boom while starting, turning, slowing or stopping to avoid off-target application.

- Make applications only after reading and understanding the complete label instructions for the product. The applicator should be familiar with all label instructions and should review them before making an application.

- Make applications only after reading and understanding the complete label instructions for the product. The applicator should be familiar with all label instructions and should review them before making an application.

- Avoid spraying close or next to ponds, lakes, rivers, and streams. Be cognizant of keeping the spray solution from reaching the water. If the herbicide is not activated by rainfall prior to weed germination, control may be reduced.

- Application near drainage ditches, ditches, or irrigation ditches can result in increased drift potential. Consider the direction of water flow, especially in the case of surface irrigation ditches.

- Consider the use of drift control additives to help reduce drift potential. Drift control additives are available from equipment manufacturers or chemical distributors.

- AVOID SPRAY DRIFT AT ALL TIMES. Do not apply under conditions that could cause drift to unprotected persons, fish, plants or other sensitive areas.

- Apply Esplanade 200SC prior to weed seed germination. Esplanade 200SC does not generally control weeds that have emerged. For maximum weed control, the herbicide needs to reach the soil.

- When applying Esplanade 200SC, avoid applying to areas that may require higher rates. If the herbicide is not activated by rainfall prior to weed germination, control may be reduced.

- Mixing Instructions

- To assure compatibility, Esplanade 200SC may be mixed with various preemergent herbicides. Esplanade 200SC is not recommended for mixing with systemic or contact herbicides. Consult the label instructions for the preemergent herbicide prior to mixing.

- To ensure compatibility, Esplanade 200SC may be mixed with various preemergent herbicides. Esplanade 200SC is not recommended for mixing with systemic or contact herbicides. Consult the label instructions for the preemergent herbicide prior to mixing.

- Do not mix Esplanade 200SC with any product that has been treated, such as paint, oil, or any other

- To ensure compatibility, Esplanade 200SC may be mixed with various preemergent herbicides. Esplanade 200SC is not recommended for mixing with systemic or contact herbicides. Consult the label instructions for the preemergent herbicide prior to mixing.

Spray Drift Management

- AVOID SPRAY DRIFT AT ALL TIMES. Do not apply under conditions that could cause drift to unprotected persons, fish, plants or other sensitive areas.

- Avoid spraying close or next to ponds, lakes, rivers, and streams. Be cognizant of keeping the spray solution from reaching the water. If the herbicide is not activated by rainfall prior to weed germination, control may be reduced.

- Application near drainage ditches, ditches, or irrigation ditches can result in increased drift potential. Consider the direction of water flow, especially in the case of surface irrigation ditches.

- Consider the use of drift control additives to help reduce drift potential. Drift control additives are available from equipment manufacturers or chemical distributors.

- AVOID SPRAY DRIFT AT ALL TIMES. Do not apply under conditions that could cause drift to unprotected persons, fish, plants or other sensitive areas.

- Avoid spraying close or next to ponds, lakes, rivers, and streams. Be cognizant of keeping the spray solution from reaching the water. If the herbicide is not activated by rainfall prior to weed germination, control may be reduced.

- Application near drainage ditches, ditches, or irrigation ditches can result in increased drift potential. Consider the direction of water flow, especially in the case of surface irrigation ditches.

- Consider the use of drift control additives to help reduce drift potential. Drift control additives are available from equipment manufacturers or chemical distributors.

- AVOID SPRAY DRIFT AT ALL TIMES. Do not apply under conditions that could cause drift to unprotected persons, fish, plants or other sensitive areas.

- Avoid spraying close or next to ponds, lakes, rivers, and streams. Be cognizant of keeping the spray solution from reaching the water. If the herbicide is not activated by rainfall prior to weed germination, control may be reduced.

- Application near drainage ditches, ditches, or irrigation ditches can result in increased drift potential. Consider the direction of water flow, especially in the case of surface irrigation ditches.

- Consider the use of drift control additives to help reduce drift potential. Drift control additives are available from equipment manufacturers or chemical distributors.

- AVOID SPRAY DRIFT AT ALL TIMES. Do not apply under conditions that could cause drift to unprotected persons, fish, plants or other sensitive areas.

- Avoid spraying close or next to ponds, lakes, rivers, and streams. Be cognizant of keeping the spray solution from reaching the water. If the herbicide is not activated by rainfall prior to weed germination, control may be reduced.

Esplanade™ 200 SC

Preemergent Herbicide for the Control of Annual Grasses and Broadleaf Weeds in Non-Residential Non-Crop Areas, Railroad and Rail Yards, Managed Roadsides, Fence Rows, Utilities, Hardscapes, Industrial, Municipal, and Government Sites

ACTIVE INGREDIENT:
Indaziflam (CAS No: 730979-19-8)..........................19.05%
OTHER INGREDIENTS:.................................80.95%
Total:..................................................100.00%

EPA Reg. No. 432-1516
Contains 1.67 pounds of indaziflam per gallon

KEEP OUT OF REACH OF CHILDREN

CAUTION

For MEDICAL and TRANSPORTATION Emergencies ONLY Call 24 Hours
A Day 1-800-334-7577
For PRODUCT USE Information Call 1-800-331-2867

FIRST AID

If swallowed:
• Call a poison control center or doctor immediately for treatment advice.
• Have person sip a glass of water if able to swallow.
• Do not induce vomiting unless told to do so by a poison control center or doctor.
• Do not give anything to an unconscious person.

If in eyes:
• Hold eyes open and rinse slowly and gently with water for 15-20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing.
• Call a poison control center or doctor for treatment advice.

If on skin:
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for treatment advice.

If inhaled:
• Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.
• Call a poison control center or doctor for further treatment advice.

For MEDICAL Emergencies Call 24 Hours A Day 1-800-334-7577
Have the product container or label with you when calling a poison control center or doctor for treatment advice.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION

Harmful if swallowed, absorbed through the skin or inhaled. Causes moderate eye irritation. Avoid contact with skin, eyes, or clothing. Avoid breathing spray mist.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

PESTICIDE STORAGE: Protect Esplanade™ 200 SC from freezing temperatures.

PESTICIDE DISPOSAL: Do not contaminate water, food or feed by storage or disposal. Pesticide wastes are acutely hazardous.

Improper disposal of excess pesticide, spray mixture, or rinseate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL: Non-refillable container. Do not re-use or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinseate into application equipment or a mix tank or store rinseate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Offer for recycling, if available or reconditioning, if appropriate. Then puncture and dispose of in a sanitary landfill, or by other procedures approved by State and local authorities.

Product of Germany
SC on these grasses only when removal of these grasses is desired at many non-crop sites for reducing fire hazards, maintaining appropriate lines-of-site, and aesthetic considerations. Examples of sites include but are not limited to guardrails, parking lots, road rights-of-way, hospital and institutional areas, and managed roadsides. Use rates for bareground applications depend on the duration of weed control desired and the weed species listed on this label.

Bareground Applications

For bareground applications, apply Esplanade 200 SC at 5-7 fl oz per acre per year. Cool season grasses such as Kentucky bluegrass, bentgrass, fescues, and buffalograss are tolerant to Esplanade 200 SC at rates up to 5 fl oz per acre. Application of Esplanade 200 SC on these grasses only when removal of these grasses is desired. Use rates for bareground applications depend on the duration of weed control desired and the weed species listed on this label.

Cool season grasses such as Kentucky bluegrass, bentgrass, fescues, and buffalograss are tolerant to Esplanade 200 SC at rates up to 5 fl oz per acre. Application of Esplanade 200 SC on these grasses only when removal of these grasses is desired at many non-crop sites for reducing fire hazards, maintaining appropriate lines-of-site, and aesthetic considerations. Use rates for bareground applications depend on the duration of weed control desired and the weed species listed on this label.
When handlers use closed systems or enclosed cabs in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d) (4-6)], the handler PPE after handling and before eating, drinking, chewing gum, using tobacco or using toilet. Remove and wash contaminated clothing before reuse.

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

If in eyes:

• Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.

• Move person to fresh air.

• Call a poison control center or doctor for treatment advice.

• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing.

• Hold eyes open and rinse slowly and gently with water for 15-20 minutes.

AGRICULTURAL USE REQUIREMENTS

≥ 14 miles

• Do not treat or allow spray drift or runoff to fall into irrigation ditches/canals or other channels that carry water that may be used for irrigation purposes.

• Applications made during periods of intense rainfall, to soils saturated with water, or soils through which rainfall will not readily penetrate may result in runoff and movement of Esplanade 200 SC.

• A compatibility test must be conducted with any potential tank mix partner with Esplanade 200 SC. Using a clear container, conduct the test as described below:

• Applications made to areas where runoff water flows onto agricultural land may injure crops.

Esplanade 200 SC is a selective, preemergent, alkylazine herbicide for control of many annual grasses and broadleaf weeds in railroad, roadside, hardscapes, industrial areas, utilities, airports, applied to herbaceous tissue such as leaves and green stems of susceptible plants. The herbicide needs to be activated prior to weed germination for most effective control. For maximum activity against germinating weeds, Esplanade 200 SC requires rainfall (minimum 0.25 inches) within several weeks after application to activate the herbicide.

Resuspending Esplanade 200 SC in Spray Solution:

• Do not dispense residue that has been stored or held for more than 24 months.

• Use of an atomizer or a spray nozzle at lower pressures and higher flow rates helps in resuspending the herbicide concentrate.

• Equip the atomizer and nozzle properly with a filter."
**Surface Water Advisory:**

- When handlers use closed systems or enclosed cabs in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, the handler PPE requirements are as follows:
  - **Shoes plus socks**
  - Chemical resistant gloves made of any waterproof material

**HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

- If in eyes:
  - Rinse eyes with plenty of water for at least 15 minutes

- If swallowed:
  - Do not induce vomiting unless told to do so by a poison control center or doctor.
  - Call a poison control center or doctor immediately for treatment advice.

**FIRST AID**

- See the potential poison control center telephone number for your area on the back of this label:
  - **3/14/12 1:43 PM Page 2**

**ESPLANADE 200 SC 2.5 gal 80966857A 110303AV2 etl 031412**

**STORAGE AND DISPOSAL**

- **ESPLANADE 200 SC** is a selective, preemergent, alkylazine herbicide for control of many annual grasses and broadleaf weeds in railroad, roadside, hardscapes, industrial areas, utilities, airports, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry intervals. The requirements in this box only apply to uses of this product for control of weeds in non-agricultural areas such as parks, golf courses, and lawns.

**EQUIPMENT**

- The applicator should be familiar with the local conditions and understand how they may impact spray drift.

**DRIFT CONTROL ADDITIVES**

- When spraying in areas where sensitive crops or vegetation are located, the applicator should use drift control additives and shielded sprayers when practical, and spray when wind speed is low. See the Spray Drift Management section for more details. The use of a hand-held or backpack sprayer may influence wind patterns. The applicator should be familiar with local conditions and understand how they may impact spray coverage.

Esplanade 200 SC is a selective, preemergent, alkylazine herbicide for control of many annual grasses and broadleaf weeds in railroad, roadside, hardscapes, industrial areas, utilities, airports, wheel ruts or in other depressions created by management activities.

**STORAGE AND DISPOSAL**

- **Spray Drift Management**

  - **Smaller areas:** Hand-held or backpack sprayers may be used to apply Esplanade 200 SC in a confined area. When spraying, avoid spraying into streams, lakes, ponds, ditches, sewers, or storm drains. Misting of aquatic plants may result. Avoid spraying near septic systems or other water sources, and into ditches, or other water bodies. Monitoring use of preemergent herbicides in the area will be necessary to determine if drift is occurring. Misting of aquatic plants may result. Avoid spraying near septic systems or other water sources, and into ditches, or other water bodies. Monitoring use of preemergent herbicides in the area will be necessary to determine if drift is occurring.

  - **Larger areas:** For larger areas, use a larger boom sprayer or a fixed-wing aircraft. When spraying in areas that are sensitive to drift, such as forested or riparian areas, be sure to take special precautions to avoid drift into sensitive areas. Avoid spraying on days when weather conditions are favorable for drift. Use drift control technologies such as spray booms or sprayers with adjustable air caps to reduce drift. Ensure that the spray drift is directed away from sensitive areas.

**ENGIN EERING CONTR OLS STATEMENTS:**

- For MEDICAL Emergencies Call 24 Hours A Day 1-800-334-7577

- For further treatment advice, contact a Poison Control Center or a doctor.

- When removing contact lenses, follow the instructions for category A on an EPA chemical-resistance category selection chart.

- Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.

**PERSONAL PROTECTIVE EQUIPMENT (PPE):**

- Chemical resistant gloves made of any waterproof material.

- Chemical resistant raincoat or any waterproof material.

- Goggles or other eye protection

- Airmask or non-medicinal respirator

- Footwear

- Respirator

- **PPE Requirements:**

  - When handlers use closed systems or enclosed cabs in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d) (4-6)], the handler PPE requirements are as follows:

    - Chemical resistant gloves made of any waterproof material such as natural rubber

    - Chemical resistant raincoat or any waterproof material

    - Goggles or other eye protection

    - Airmask or non-medicinal respirator

    - Footwear

    - Respirator

**PRODUCT INFORMATION**

- **Dual Action:** Includes the preemergent herbicide indaziflam as an active ingredient. Esplanade 200 SC is a two-in-one herbicide with a preemergent effect and a residual effect. The preemergent effect is achieved by inhibiting germination and growth of annual weeds before they emerge above the ground. The residual effect is achieved by controlling weeds for an extended period of time after they emerge. The preemergent effect lasts until the second week of June and the residual effect lasts until the first week of January. The residual effect is achieved by inhibiting germination and growth of annual weeds before they emerge above the ground. The residual effect is achieved by controlling weeds for an extended period of time after they emerge. The preemergent effect lasts until the second week of June and the residual effect lasts until the first week of January.

- **Preemergent Herbicide:** Esplanade 200 SC is a preemergent herbicide that inhibits germination and growth of annual weeds before they emerge above the ground. The preemergent effect lasts until the second week of June and the residual effect lasts until the first week of January.

- **Residual Herbicide:** Esplanade 200 SC is a residual herbicide that inhibits germination and growth of annual weeds for an extended period of time after they emerge. The residual effect lasts until the first week of January.

**RECOMMENDED APPLICATIONS**

- **Ground Coverage:** Spraying of grassy areas, low-growing vegetation, and areas with a low plant density.

- **Selective Application:** Spraying of specific areas where selectivity is needed, such as between rows or around plants.

- **Surrounding Area:** Spraying of surrounding areas to prevent the spread of weeds.

- **Irrigation:** Incorporation into irrigation systems to prevent the spread of weeds.

- **Preseason:** Spraying before planting to prevent the growth of weeds.

- **Postseason:** Spraying after planting to control weeds that have already emerged.

**APPLICATOR INSTRUCTIONS**

- **Mixing and Application:**

  - **Mixing Instructions:**

    - Mix the recommended amount of Esplanade 200 SC in a tank mix with the compatible herbicides. Mix thoroughly and thoroughly stir the mixture after each addition of ingredients. Avoid mixing incompatible materials in the same equipment. Do not mix with any other herbicides, liquid fertilizers, or surfactants. Do not mix with any other herbicides, liquid fertilizers, or surfactants.

    - **Incompatible Materials:**

      - Do not mix with any other herbicides, liquid fertilizers, or surfactants.

- **Application Techniques:**

  - **Application Rates:**

    - Apply 3.2 g of Esplanade 200 SC per acre or 0.25 g of Esplanade 200 SC per 1000 square feet (3.2 g/acre or 0.25 g/1000 sq ft).

    - Apply 6.4 g of Esplanade 200 SC per acre or 0.5 g of Esplanade 200 SC per 1000 square feet (6.4 g/acre or 0.5 g/1000 sq ft).

- **Application Techniques:**

  - **Application Rates:**

    - Apply 3.2 g of Esplanade 200 SC per acre or 0.25 g of Esplanade 200 SC per 1000 square feet (3.2 g/acre or 0.25 g/1000 sq ft).

    - Apply 6.4 g of Esplanade 200 SC per acre or 0.5 g of Esplanade 200 SC per 1000 square feet (6.4 g/acre or 0.5 g/1000 sq ft).

**APPLICATION INSTRUCTIONS**

  - **Application Rates:**

    - Apply 3.2 g of Esplanade 200 SC per acre or 0.25 g of Esplanade 200 SC per 1000 square feet (3.2 g/acre or 0.25 g/1000 sq ft).

    - Apply 6.4 g of Esplanade 200 SC per acre or 0.5 g of Esplanade 200 SC per 1000 square feet (6.4 g/acre or 0.5 g/1000 sq ft).

**COMPATIBILITY TESTING WITH OTHER FERTILIZERS**

- **Ground Coverage:** Spraying of grassy areas, low-growing vegetation, and areas with a low plant density.

- **Selective Application:** Spraying of specific areas where selectivity is needed, such as between rows or around plants.

- **Surrounding Area:** Spraying of surrounding areas to prevent the spread of weeds.

- **Irrigation:** Incorporation into irrigation systems to prevent the spread of weeds.

- **Preseason:** Spraying before planting to prevent the growth of weeds.

- **Postseason:** Spraying after planting to control weeds that have already emerged.
APPLICATIONS to newly seeded turf made sooner than 200 SC in the spring or fall to these grasses will control labeled weeds and allow low maintenance turf to develop. A repeat application can be made but not to exceed a total amount of 10 fl oz per acre.

Esplanade 200 SC may be used for preemergent residual control of certain weeds near railroad tracks, ballasts, and rail yards. Follow application instructions under Railroads and Rail Yards areas. Esplanade 200 SC may be used alone for residual weed control or in tank mixture. Tank mixtures with post-emergent herbicides help to control existing weeds. Observe use restrictions for all centipede grass (Bareground Applications for Non-Residential Non-Crop Sites).

Weeds Suppressed

- Crabgrass, Smooth
- Crabgrass, Large/Hairy
- Cheatgrass
- Barnyardgrass, common
- Annual bluegrass
- Lactuca serriola
- Sisymbrium irio
- Matricaria maritima
- Medicago lupulina
- Digitaria ischaemum
- Bromus secalinus
- Echinochloa crus-galli
- Poa annua
- Oenothera laciniata
- Oenothera biennis
- Murdannia nudiflora
- Taraxacum officinale
- Veronica arvensis
- Mollugo verticillata
- Circium arvense
- Cardamine species

Rate Range (fl oz/A)

- 8 months
- 10 months
- 12 months

Managed Roadsides 5-7
Warm Season Turf Release 3.5-5

IMPORTANT READ BEFORE USE

Read the entire Directions for Use. Conditions, Overlap of Markets, Selection and Preparation of the Area, Use, Initial Applications and Repeated Applications, Tank Mixture, and Applications to Annual or Perennial Grasses are not acceptable, unless the unopened product container is returned immediately. Do not return the unopened product container to the store. Herbicides if a tank mixture is applied. Use-rates for bareground applications depend on the duration of weed control desired and the weed species listed on this label. Apply Esplanade 200 SC at 5-7 fl oz per acre. A repeat application can be made but not to exceed a total amount of 10 fl oz per acre per year.

**Weeds Controlled or Suppressed by Esplanade 200 SC**
