First Aid

If on Skin or Clothing:
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for treatment advice.

If in Eyes:
- Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION

Skin or eye irritation. Harmful if absorbed through the skin. Avoid contact with eyes, skin or clothing. Personal Protective Equipment (PPE) is required for all workers.

APPENDIX B

Agricultural Use Requirements (continued)

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:
- Coveralls
- Chemical resistant gloves made of any waterproof material
- Shoes plus socks

NON AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are not within the scope of the Worker Protection Standard for agricultural pesticides. 40 CFR Part 170. The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses. Keep unprotected persons out of the treated areas until sprays have dried.

This labeling MUST be in possession of the user at the time of pesticide application.

STORAGE AND DISPOSAL

- Do not contaminate water, food, or feed by storage or disposal.
- Pesticide Storage: Store in a cool, dry, secure place.
- Pesticide Disposal: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility. Container Disposal: Non-refillable container. Do not reuse or refill this container. Drain the container promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinse into application equipment or a mix tank or other rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Offer for recycling if available or reconditioning or purchase and dispose of in a sanitary landfill, or by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

GENERAL INFORMATION

ProStar® 70 WG Fungicide is a systemic fungicide recommended for control of diseases of turf caused by Rhizoctonia. This product should be used primarily for control of Rhizoctonia Brown Patch, and has excellent safety on Kentucky Bluegrass, creeping bentgrass, perennial ryegrass, red fescue, tall fescue, tall fescue mixtures, St. Augustine grass, and zoysiagrass.

APPLICATION AND DOSAGE

Apply the recommended amount of ProStar 70 WG Fungicide in 2 to 5 gallons of water per 1,000 sq ft as a broadcast application, unless otherwise specified. See Fairy Ring, Gray Snow Mold directions. Add appropriate amount of water to the spray tank. If ProStar 70 WG Fungicide is to be tank mixed with an appropriately labeled fungicide or other product to control another pest, add ProStar 70 WG Fungicide first. Prior to spraying with a tank mixture not specified on this label, it is advisable to determine if the products are physically compatible. For best results, spray the treated area uniformly, using equipment such as flat fan nozzles. Use 50-mesh or larger screens. Avoid mowing for 24 hours after application and do not irrigate until spray has dried on grass, unless otherwise noted. When non-labeld diseases are also present, ProStar 70 WG Fungicide may be tank mixed with appropriate labeled fungicides if the products are physically compatible. When tank-mixing with other products, it is the responsibility of the end-user/applicator to ensure that the tank-mix partner is registered in the state where the application is being made.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standards, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forest nurseries, and greenhouses; and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry intervals. Do not apply this product in a way that will contact workers or other persons, either directly or indirectly, through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard. Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.

</table>

### BROWN PATCH (Rhizoctonia solani):

- **Preventative**: Apply 1.5 to 2.2 oz. of ProdStar 70 WG Fungicide per 1,000 sq ft in 2 to 5 gallons of water prior to initial signs of disease development. Repeat application 14 to 21 days after initial application if conditions favor disease development.
- **Curative**: Apply 3.0 oz. of ProdStar 70 WG Fungicide per 1,000 sq ft in 2 to 5 gallons of water to turf with active brown patch. Make a second application 14 to 21 days later if conditions favor disease development.

### LARGE PATCH (Rhizoctonia solani) of ZOYSIAGRASS (formerly Zoysia Patch):

- **Preventative**: Apply ProdStar 70 WG Fungicide in the fall or spring for control of large brown patch on zoysia grass. Disease control is more effective if made prior to or after initial symptom development. Apply 2.2 oz of ProdStar 70 WG Fungicide per 1,000 sq ft in 2 to 5 gallons of water and repeat 30 days later if symptoms persist. A foliar surfactant is recommended for best results. Full applications may suppress disease development in the following spring.

### USE PRECAUTIONS

- Apply no more than a combined total of 4.5 oz of ProdStar 70 WG Fungicide per 1,000 sq ft or 12.25 lb per acre of ProdStar 70 WG Fungicide as a broad-spectrum application during a single growing season.

### FOR USE IN GREENHOUSES, SARAN AND SHADE HOUSES, OUTDOOR CONTAINER AND FIELD-GROWN ORNAMENTAL NURSERY STOCK

- **ProdStar 70 WG Fungicide**: A systemic fungicide that, when mixed with the appropriate volume of water, will provide systemic, preventative, and curative activity in the management of foliar, soilborne, and propagative diseases caused by rust, species of Rhizoctonia and Scirruriella.

### GENERAL INFORMATION

- **ProdStar 70 WG Fungicide** can be used on a preventative basis at all sites of use where applicable when conditions are optimum for disease development or past history indicates disease development is imminent. When used as a curative treatment, apply ProdStar 70 WG Fungicide at the highest recommended concentration or rate allowed according to label directions.

### FAIRY RING (including Marasmius spp., Lepiota spp., Agaricus spp.):

- **Preventative**: ProdStar 70 WG Fungicide, applied in 2 to 5 gallons of water at 2.2 oz per 1,000 sq ft, may suppress the development of fairy ring caused by various basidiomycete pathogens. A second application may be made at 21 to 28-day intervals using the same dosage rate.
- **Curative**: ProdStar 70 WG Fungicide, applied in 2 to 5 gallons of water at 4.5 oz per 1,000 sq ft, may suppress the development of fairy ring caused by various basidiomycetes pathogens. Application should be made to the affected area at the first sign of ring development (greening, death of turf, mushroom). Symptom suppression may be temporary and symptoms may recur. In these cases, a second application of 4.5 oz per 1,000 sq ft is suggested, not less than 30 days after the first application. Affirmation prior to subsequent applications has been beneficial in some cases. Use of a nonionic surfactant in combination with ProdStar 70 WG Fungicide is recommended. Treated areas should be irrigated prior to and after application with sufficient water to maintain growth of turf. Disease control is improved if turf is maintained at optimum fertility levels after symptom development. Turf that has been damaged extensively by fairy ring development may have to be reseeded. Do not treat more than 10,000 sq ft per acre of turf area.

### RED THREAD (Laetisaria fuciformis)

- **Pink Patch (Limonomycetes roseus/pers.)**
- **Yellow Patch (Rhizoctonia cerealis)**
- **SOUTHERN BLIGHT (Sclerotium rolfsii):**
  - Apply 1.5 to 2.2 oz of ProdStar 70 WG Fungicide per 1,000 sq ft in 2 to 5 gallons of water prior to or after initial signs of disease development and repeat after 21 to 28 days if needed.

- **GRAY SNOW MOLD (Taylula spp.):**
  - Apply 2.2 to 4.5 oz of ProdStar 70 WG Fungicide per 1,000 sq ft in 2 to 5 gallons of water in the fall prior to permanent snow cover.
  - Use of a wetting agent has proven beneficial. If Pink Snow Mold (Aurantium myxii) is also suspected, ProdStar 70 WG Fungicide may be tank mixed with products labeled for control of that disease, such as PCNB, Bayleton, or Banrot. Prior to application, both products should be mixed in small volumes to achieve physical compatibility. Do not treat more than 16,000 sq ft per acre of turf area.
FOR THE STATE OF NEW YORK USE THE FOLLOWING DIRECTIONS:
NASSAU AND SUFFOLK COUNTIES: USE IS LIMITED TO DRENCH APPLICATION TO CONTAINER GROWN ORNAMENTALS IN GREENHOUSES ONLY

- FOLIAR APPLICATIONS TO FIELD GROWN OR OUTDOOR CONTAINER GROWN ORNAMENTALS (Not for use in Nassau and Suffolk counties of New York). Do not make more than 2 applications of ProStar 70 WG Fungicide per acre per year or no more than 4.2 pounds active ingredient per acre per year. See Foliar Spray Application Section for more details.

- CONTAINER GROWN ORNAMENTALS (DRENCH APPLICATION): Do not make more than 4 applications of ProStar 70 WG Fungicide per year to ornamental plantings. Mix 3-4 ounces ProStar 70 WG Fungicide per 100 gallons of water and use 1-3 pints of this spray solution per square foot of container surface area. A single application of ProStar 70 WG Fungicide should not exceed 43 pounds active ingredient per acre of container surface area.
  - Do not apply ProStar 70 WG Fungicide as a drench to Field grown or outdoor container ornamentals in Nassau and Suffolk counties of New York.
  - If using chemigation to apply ProStar 70 WG Fungicide, use drip or trickle type irrigation systems. When using fertigation injectors or a hand held sprayer, use a breaker type nozzle on the end of the spray hose or spray wand. In all cases, make sure the drench water is deposited within the plant container and remains there until runoff. Before applying the fungicide, be sure the potting soil in each container is pre-wetted. See Chemigation and Drench Application Sections for more details.

USE PRECAUTIONS
NOTICE TO USER: ProStar 70 WG Fungicide has shown acceptable plant tolerance to the specific genera and species listed on this label. Due to the large number of species and varieties of ornamentals and nursery plants, it is impossible to test every one for tolerance to ProStar 70 WG Fungicide. Neither the Manufacturer nor the Seller has determined whether or not ProStar 70 WG Fungicide can be used safely on ornamental plants not specified on the label. For plants not specified on the label, trial applications should be made at the highest labeled concentrations to at least 25 plants. Apply 3 times at 14-day intervals (foliar) and twice at a 28-day interval (drench). Observe for phytotoxicity prior to each application and 2 weeks after trial application.

PLANT TYPE

- Herbaceous bedding: Geranium, Petunia, Snapdragon.
- Flowering: Chrysanthemum, Hollyhock, Iris, Lily, Petunia.
- Tropical foliage: English Ivy, Pothos, Fern.

FOLIAR SPRAY APPLICATION

MIXING AND APPLICATION INSTRUCTIONS:
Add the appropriate amount of ProStar 70 WG Fungicide to a partially filled tank and follow previous instructions.

ADJUVANT ADDITION:
Use of a compatible surfactant may improve coverage and uptake. Often, the addition of surfactants (wetting agents) will aid in the performance of plant protection products under certain conditions. Generally, surfactants (wetting agents) are not required with ProStar 70 WG Fungicide where adequate spray coverage is achieved. Should inadequate spreading of the ProStar 70 WG Fungicide sprays occur, the addition of a surfactant (wetting agent) may be considered. If addition is warranted, trial applications must be followed, using the instructions in the section above. Notice to Deer as phytotoxicity can result from such additions.

SOIL DRENCH APPLICATION

MIXING AND APPLICATION INSTRUCTIONS:
Add the appropriate amount of ProStar 70 WG Fungicide to a partially filled tank and follow previous instructions. Maintain continuous agitation throughout application.

DISEASE(S) CONTROLLED AND APPLICATION CONCENTRATION/RATES:
ProStar 70 WG Fungicide will prevent and provide curative activity against species of Rhizoctonia and Sclerotium rot. If needed, retreat with ProStar 70 WG Fungicide 21 to 28 days after the initial application. Apply ProStar 70 WG Fungicide at 3 to 6 oz per 100 gallons. Applications to ground and raised beds should be delivered at 1 pint per square foot (4-inch depth or less) and 2 pints per square foot for depths greater than 4 inches.

To container, use the following recommended volumes per container size:

<table>
<thead>
<tr>
<th>Container Size</th>
<th>Application Volume Per Sq Ft</th>
<th>Container Size</th>
<th>Application Volume Per Sq Ft</th>
</tr>
</thead>
<tbody>
<tr>
<td>7 inch</td>
<td>0 lb/oz</td>
<td>6 inch</td>
<td>0 1/2 lb/oz</td>
</tr>
<tr>
<td>8 inch</td>
<td>1 lb/oz</td>
<td>5 inch</td>
<td>2 1/2 lb/oz</td>
</tr>
<tr>
<td>11 lb/oz</td>
<td>2 lb/oz</td>
<td>4 inch</td>
<td>5 lb/oz</td>
</tr>
<tr>

<td>3 inch</td>
<td>7 1/2 lb/oz</td>
</tr>
<tr>
<td>17 lb/oz</td>
<td>4 lb/oz</td>
<td>2 inch</td>
<td>10 lb/oz</td>
</tr>
</tbody>
</table>

Note: Above 10 inches in nursery container production, a drench volume of 2 1/2 to 3 pints per sq ft of surface area may be required.

CUTTING & BULB DIP

MIXING APPLICATION INSTRUCTIONS:
Add the appropriate amount of ProStar 70 WG Fungicide to a partially filled tank and follow previous instructions. During dipping period, keep ProStar 70 WG Fungicide suspension under constant agitation.

CUTTING AND BULB DISEASE(S) CONTROLLED AND APPLICATION CONCENTRATIONS:
ProStar 70 WG Fungicide will prevent and provide curative activity against species of Rhizoctonia and Sclerotium rot. Use at 3 to 6 oz per 100 gallons. Immense cuttings for 5 minutes, remove and allow to drain and preferably dry prior to planting. Wear cutting outlined in PPE requirements for applicators and other handlers.

CHEMIGATION INFORMATION

Apply this product only through pressurized drench (broom, sprayer, or drip/trickle irrigation systems). Do not apply this product through any other type of irrigation systems. Crop injury, lack of effectiveness, or illegal pesticide residue in the crop can result from nonuniform distribution of treated water.

If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers, or other experts. Do not connect any irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-proscribed safety devices for public wafer systems are in place.

A person knowledgeable of the chemigation system and responsible for its operation or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise. Pesticide supply tanks are recommended for the application of this product. See label instructions for dilution use rates and timing of application. Agitate continuously during application.

OVERHEAD, MICROJET, OR Drip IRRIGATION APPLICATION

ProStar 70 WG Fungicide can be applied to public water systems if the operator is registered for that operation, microjet, or drip irrigation systems. They are approved for application in irrigation water at rates as recommended on this label. Follow the label directions for the specific restrictions and limitations. This product must not be mixed with any product containing a label prohibition against mixing on that product.

Apply this product only through an overhead, microjet, or drip irrigation system. Do not apply this product through any other type of irrigation system. Plant injury or lack of effectiveness can result from nonuniform distribution of treated water. If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers, or other experts. Do not connect any irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-proscribed safety device for public water systems are in place.

A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise. Public water system means a system for the provision to the public of piped water for human consumption if such system has a least 15 service connections of regularly serves an average of at least 25 individuals daily or at least 60 days out of the year.
OPERATION INSTRUCTIONS

- The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from back flow. Check valves connected to public water systems must contain a functional, return-line-pre-

- The water system in the water source must be piped in to the store tank or reservoir tank in order to add to the internal diameter of the fluid pipe.

- The system must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

- The system must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

- The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

- The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

- Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

- Do not cycle the water supply lines or drain the irrigation system.

- Do not apply any water to the irrigation system during the irrigation cycle.

- With overhead or microjet systems, apply enough water to thoroughly wet the soil media.

PRECAUTIONS FOR IRRIGATION APPLICATIONS:Wet distribution patterns do not overlap sufficiently, unacceptable control may result. Where distribution pat-
ProStar® 70 WG Fungicide
For Use on Turf and Ornamentals

A Systemic Fungicide for Management of Fellar, Soilborne, Cuttling and Bulb Diseases Caused by Basidiomycete Fungi in Greenhouses, Saran and Shade Houses, Outdoor Container and Field-Grown Ornamental Nursery Stock.

ACTIVE INGREDIENT:
Fludioxonil: N-(3,1-methylbenzyl) N,N-dimethyl-2-phenylacetamidinemethanamine 30% 700000 ppm
OTHER INGREDIENTS: 20%
TOTAL 100%

EPA Reg. No. 432-123  EPA Est. No. 264-MO-003

KEEP OUT OF REACH OF CHILDREN
CAUTION

For MEDICAL And TRANSPORTATION Emergencies ONLY

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
CAUTION
Causes moderate eye irritation. Harmful if absorbed through the skin. Avoid contact with eyes, skin or clothing.

ENVIRONMENTAL HAZARDS
This product is toxic to aquatic invertibrates. For terrestrial uses, do not apply to water areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters.

STORAGE AND DISPOSAL
Do not contaminate water, food or feed by storage or disposal.

PESTICIDE STORAGE: Store in a cool, dry, secure place.

PESTICIDE DISPOSAL: Washes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

CONTAINER DISPOSAL: Non-refillable container. Do not reuse or refill this container. Trade rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour residue into application equipment or a mix tank or store residue for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Offer for recycling if available or reconditioning; or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

Refer to attached leaflet for complete Directions for Use and Precautionary Statements.

FIRST AID

If on Skin or Clothing: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.

If In Eyes: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.
