Rinse thoroughly with water for at least 20 minutes and then wash well with soap and water. Coveralls

Protective eyeglasses

To improve effectiveness of this product, apply in combination with other pesticide products that are registered for the same use site and application techniques.

Kidney damage may result from this product. The mature of the turf in delayed by treat this product.

Do not apply this product to any crop or to any surface on which it will later come in contact with sensitive crops.

For more information, follow the instructions for water dispersible granule in 1.3 ounce bottle:

Add 2 teaspoons (1/3 fl. oz.) of nonionic surfactant per gallon of water. Measure this product as a level and not a rounded scoop. Mix or shake thoroughly for at least two minutes to completely disperse this spray suspension for a minimum of 10 minutes. Apply spray solutions within 24 hours after mixing.
For a non-selective burndown of emerged annual grasses, broadleaf weeds and nutsedge, use this product in combination with glyphosate herbicide formulations labeled for these same uses.

For planting any plants, trees, or brush not provided for on this label, do a test for residual toxicity by planting material diagonally across treated area before planting the entire area.

application restrictions. Follow the specifications listed on the most restrictive label when planning and applying the tank mixture combination.

*For postemergence control of horsetail

For Best Performance

To maximize the control of nutsedge, a second post-emergent spot or broadcast spray is applied 6 to 10 weeks after the initial treatment to the areas where nutsedge has regrown or after other postemergent treatments have reduced the amount of nutsedge present. For turfgrass renovations, apply at 2/3 ounces by weight per acre in combination with glyphosate herbicide formulations labeled for turfgrass renovation. This is for a non-selective pre-plant burndown of emerged annual grasses, broadleaf weeds and nutsedge.

Avoid application of this product when turfgrass or nutsedge is under stress since turf injury and poor nutsedge control may occur. When transplanted into landscaped areas treated with this product, flowers, ornamentals plants and shrubs may be injured. Do not mow turfgrass for 2 days before or 2 days after application for best results.

This product is effective if no rainfall occurs within 3 hours, but best results are obtained with no rainfall or irrigation for at least 4 hours. This product is quick to act on targeted weeds by stunting growth allowing the crop to overtake the development of the targeted weeds. Once the development of the targeted weeds is stunted, the leaves and growing point begin to discolor and die. Complete control typically occurs within 7 to 14 days depending on the stage and development of the targeted weeds. Control generally takes place in 7 to 14 days.
