PRECAUTIONARY STATEMENTS
KEEP OUT OF REACH OF CHILDREN.
Hazards to Humans and Domestic Animals

CAUTION
Causes moderate eye injury. Wear protective eyewear (goggles, face shield or safety glasses). Harmful if inhaled or absorbed through the skin. Avoid contact with skin, eyes or clothing. Avoid breathing dust. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reuse.

FIRST AID
Call a poison control center or doctor for treatment advice. Have the product container or label with you when calling a control center or doctor, or before going for treatment. You may also contact TechPac, LLC at 1-800-420-9347 for emergency medical treatment information.

Environmental Hazards
Do not apply directly to water, to areas where surface water is present or intertidal areas below the mean high water mark. Do not contaminate water by cleaning of equipment or disposal of equipment wash waters.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or to other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulations.

GENERAL INFORMATION
Garden Tech® RootBoost™ containing Hormodin® 1 may be used on three types of cuttings.
• Hardwood: such as Dogwood, Juniper, broadleaf and needle evergreens.
• Semi-Hardwood: such as broadleaf evergreens and woody ornamentals with firm wood and mature leaves such as Azalea, Rhododendrons, Magnolia and Photinia.

• Softwood and Succulents: such as Cactus, Fuchsia, Ice Plant and Begonia.
Select cuttings from healthy plants. Success is generally best when taking softwood cuttings or “new wood”. Timing is important. Professionals propagate year round but two good times for taking cuttings are:
• in the fall using mature dormant growth which would be classified as a hardwood or semi-hardwood cutting.
• in the spring when the cuttings would be new growth or classified as a softwood cutting.
Fertilizer can encourage top growth and may not be used for one week after treatment.

TYPE OF CUTTING TO USE
Cuttings of the current season’s growth, 4 to 6 inches in length, generally are most satisfactory. Entire shoots of this length, cut at or near the base, should be taken, unless it is known that other parts root more readily. Some plants are readily propagated from leaf-bud cuttings. The cut may be made slanting or straight with small pruning shears, or with a knife. Large leaved types of cuttings will need to be trimmed, but it is preferable to use
the largest leaf area which can be kept in good condition, and which at the
same time meets the requirements for economy of space.

**TIME TO TAKE CUTTINGS**

Throughout the United States, the time to take cuttings will be dependent
on when new growth starts. Cuttings of the current season’s growth, 4 to
6 inches in length, generally are the most satisfactory.

Note: Cuttings of certain plants can be taken over a much wider range of
time in the South than in the North, and corresponding season advance
must be considered.

In the State to New York, cuttings of most deciduous shrubs will root best
when taken during June, July and August. A few varieties can be taken the
latter part of April, and others during May, depending upon when new
growth starts. Cuttings of the current season’s growth, 4 to 6 inches in
length, generally are the most satisfactory. Cuttings taken between August
and December will vary considerably in their capacity to root.

For plants grown indoors, cuttings should be taken according to the con-
dition of the material, without regard to season.

---

**CARE OF CUTTING MATERIAL**

Keep cutting material in a fresh condition from the start. Cuttings of many
varieties keep fresh when the basal ends of the stems are immersed in
water or wrapped in wet cloth or burlap until ready to place in the Garden
Tech® RootBoost™. Do not keep shoots and branches in closed contain-
ers for long periods. Frequent spraying of the cutting material, according
to the dryness of the air, or covering with moist cheese cloth, will prevent
excessive wilting.

**PLANTING CUTTINGS AND HOW TO CARE FOR THEM**

After treatment with Garden Tech® RootBoost™, plant the cuttings in a
mixture of 1/4 peat moss and 3/4 sand (by volume), or in sand only, until
rooted. Propagators who have a satisfactory rooting medium should con-
tinue to use it. Any method of planting cuttings which keeps them in good
condition may be used. When cuttings are planted in a vertical position, they
require more critical care than when slotted in such a way that the exposed
leaves lie flat or close to the surface of the rooting medium. Sufficient shade
must be provided at all times, but particularly on hot, bright days, to keep
the cuttings fresh, but not dense enough to cause rotting of leaves, or the
growth of molds. Immediately after planting, the cuttings should be watered thoroughly and, thereafter, according to climactic conditions. The rooting medium below the surface must not be allowed to become dry.

A temperature in the bed of 70° to 75° F. has proved satisfactory for many species. Temperatures below 60° are not generally satisfactory with tested cuttings.

**APPLICATION OF GARDEN TECH® ROOTBOOST™:**
1. The cut ends of the cuttings should be slightly moistened before treatment.
2. Stir cut ends in Garden Tech® RootBoost™ powder.
3. Remove excess powder by tapping on rim of container.
4. Plant treated cuttings in a rooting medium such as *potting soil, mix, etc.* Mist regularly.

---

**STORAGE AND DISPOSAL**

Do not contaminate water, food or feed by storage or disposal.

**STORAGE:** Store in a cool dry place. Keep in original container.

**PESTICIDE DISPOSAL:** Pesticide or rinse waters that cannot be used according to label instructions must be disposed of according to applicable Federal, State or local procedures under the Resource Conservation and Recovery Act. Wastes resulting from the use of the product may be disposed on site or at an approved waste disposal facility.

Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available.

**CONTAINER DISPOSAL (metal/plastic container):** Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate in to application equipment or mix tank or store rinsate for later use or disposal. Drain for 10 seconds after flow begins to drip. Repeat this procedure two more times.
NOTICE OF WARRANTY

TechPac, LLC, warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes referred to in the Directions For Use. To the extent applicable by law, buyer assumes all risks of use and handling which is a variance in any way with the directions hereon.
