NET CONTENTS: 55 GAL • 275 GAL • 330 GAL

BATCH: ____________

ID # 20492

FOR TREATMENT OF MEAT AND POULTRY, COOKED EGGS OR FRUIT AND VEGETABLE CONVEYORS: Remove gross food particles and excess soil by a pre-flush or pre-scrub. Wash with a good detergent or compatible cleaner. Rinse equipment thoroughly with potable water and then rinse equipment with a sanitizing solution. During processing apply 1 oz. of the product per gallon of water (200-400 ppm active quats) to conveyors with suitable feeding equipment. Do not allow this solution to be sprayed directly on food. Controlled volumes of sanitizer are applied to return portions of conveyor through nozzles so located as to permit maximum drainage of sanitizer from equipment and to prevent puddles on top of belt. During interruptions in operation, allow solution to circulate using spray equipment to prevent build-up. After operation, allow equipment to drain dry. Let air dry thoroughly before cleaning. Prepare sanitizing solution by adding 1-2 oz. of this product per gallon of water (2 oz. per gallon of water). Prepare a fresh solution daily or when visibly dirty.

GLOVE DIP/SPRAY SANITIZER DIRECTIONS: To prevent cross contamination from area to area, dip or spray pre-washed plastic, latex, or other synthetic gloves with 1 oz. of the product per gal. of water; 2 oz. of the product per gal. of water in the presence of 5% soil and 3% hard water on hard, non-porous surfaces. Do not spray eggs. Prepare sanitizing solution by adding 1-2 oz. of this product per gallon of water (200-400 ppm active quats) (or equivalent use dilution). Prepare a fresh solution daily or when visibly dirty.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage and disposal.

PESTICIDE STORAGE: Store only in original container. Keep this product under locked storage sufficient to make it inaccessible to children or persons unfamiliar with its proper use.

PESTICIDE DISPOSAL: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal Law. If these wastes are flushed down the drain, the drain pipe must be disconnected from the sewage system before flushing to prevent the entry of pesticide into the public sewage system.

NOTE TO PHYSICIAN: Probable mucosal damage may contraindicate the use of gastric lavage.
