FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF WASHINGTON

APPLICATION DIRECTIONS FOR CANOLA SEED PROPAGATION

Ignite® may be used in canola seed propagation as a foliar spray to selectively eliminate canola plants that do not carry a gene that imparts tolerance to glufosinate-ammonium and as such, can be applied to remove susceptible segregates during canola seed propagation. Breeding material not possessing the glufosinate-ammonium tolerance gene will be severely injured or killed if treated with this herbicide.

Apply Ignite® only to canola labeled as LibertyLink®. Uniform, thorough spray coverage is necessary to achieve consistent activity.

APPLICATION RATE AND TIMING

Up to three of applications of Ignite® at up to 22 fl oz/A per application may be made to canola for seed production. Applications may be made from the cotyledon stage up to the early bolting stage (e.g., BBCH 18 - 30, between just prior to stem elongation/bolting, eight or more leaves and beginning of stem elongation, no internodes).

RESTRICTIONS TO THE DIRECTIONS FOR USE ON CANOLA FOR SEED PRODUCTION

- DO NOT apply more than three applications of Ignite® at up to 22 fl oz/A per application per growing season.
- DO NOT apply more than 66 fl oz/A of Ignite® per growing season.
- DO NOT apply Ignite® beyond the early bolting stage or within 65 days of harvesting canola seed.
- DO NOT use treated canola seed for food, feed or oil purposes.
- DO NOT apply Ignite® if canola shows injury from prior herbicide applications or environmental stress (drought, excessive rainfall, etc.).
- DO NOT apply this product through any type of irrigation system.
- Refer to the “Rotational Crop Restrictions” section under the “Information” heading of the Ignite® label for the appropriate rotational crop plant back intervals.

WSDA Container Disposal Guidance: Pesticide containers must be properly cleaned prior to disposal. The best time to clean empty pesticide containers is during mixing and loading, because residue can be difficult to remove after it dries. Triple rinse (or pressure rinse) the pesticide container, empty all pesticide rinse water into the spray tank, and apply to a labeled crop or site. Recycling cleaned containers is the best method of container disposal. Information regarding the recycling of empty and cleaned plastic pesticide containers in Washington is available on the WSDA Waste Pesticide Program web site at http://agr.wa.gov/PestFert/Pesticides/WastePesticide.aspx. Cleaned containers may also be disposed of in a sanitary landfill, if permitted by the county. Burning is not a legal method of container disposal in Washington.
