RE: EPA SLN Reg. No. WA-120004

Enclosed is revised labeling for Washington Special Local Need (SLN) WA-120004 issued to Bayer CropScience to allow three applications of Liberty® 280 SL Herbicide (EPA Reg. No. 264-829) for the selective removal of segregating “B” line plants in canola grown for seed only. This registration was issued under authority of Section 24(c) FIFRA.

The label statement “24(c) Supplemental Label” was revised to “FIFRA Section 24(c) Special Local Need Label”.

If you have any questions, please contact me at (360) 902-2049 or by e-mail at sfoss@agr.wa.gov.

Sincerely,

PESTICIDE MANAGEMENT DIVISION

Liberty® 280 SL Herbicide
For use in Canola Seed Production
EPA REG No. 264-829
SLN No. WA-120004

FIFRA Section 24(c) Special Local Need Label

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF WASHINGTON

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. This label must be in the possession of the user at the time of pesticide application. Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.

THIS LABEL FOR LIBERTY® 280 SL HERBICIDE EXPIRES AND MUST NOT BE DISTRIBUTED OR USED IN ACCORDANCE WITH THIS SLN REGISTRATION AFTER DECEMBER 31, 2012.

APPLICATION DIRECTIONS FOR CANOLA SEED PROPAGATION

Liberty® 280 SL Herbicide may be used in canola seed propagation as a foliar spray to selectively eliminate canola plants that do not carry a gene that imparts tolerance to glufosinate-ammonium and as such, can be applied to remove susceptible segregates during canola seed propagation. Breeding material not possessing the glufosinate-ammonium tolerance gene will be severely injured or killed if treated with this herbicide.

Apply Liberty® 280 SL Herbicide only to canola labeled as LibertyLink®. Uniform, thorough spray coverage is necessary to achieve consistent activity.

APPLICATION RATE AND TIMING
Up to three applications of Liberty® 280 SL Herbicide at up to 22 fl oz/A per application may be made to canola for seed production. Applications may be made from the cotyledon stage up to the early bolting stage (e.g., BBCH 18 - 30, between just prior to stem elongation/bolting, eight or more leaves and beginning of stem elongation, no internodes).

RESTRICTIONS TO THE DIRECTIONS FOR USE ON CANOLA FOR SEED PRODUCTION

- **DO NOT** apply more than three applications of Liberty® 280 SL Herbicide at up to 22 fl oz/A per application per growing season.
- **DO NOT** apply more than 66 fl oz/A of Liberty® 280 SL Herbicide per growing season.
- **DO NOT** apply Liberty® 280 SL Herbicide beyond the early bolting stage or within 65 days of harvesting canola seed.
- **DO NOT** use treated canola seed for food, feed or oil purposes.
- **DO NOT** apply Liberty® 280 SL Herbicide if canola shows injury from prior herbicide applications or environmental stress (drought, excessive rainfall, etc.).
- **DO NOT** apply this product through any type of irrigation system.
- Refer to the "Rotational Crop Restrictions" section under the "Information" heading of the Liberty® 280 SL Herbicide label for the appropriate rotational crop plant back intervals.

WSDA Container Disposal Guidance: Pesticide containers must be properly cleaned prior to disposal. The best time to clean empty pesticide containers is during mixing and loading, because residue can be difficult to remove after it dries. Triple rinse (or pressure rinse) the pesticide container, empty all pesticide rinse water into the spray tank, and apply to a labeled crop or site. Recycling cleaned containers is the best method of container disposal. Information regarding the recycling of empty and cleaned plastic pesticide containers in Washington is available on the WSDA Waste Pesticide Program web site at http://agr.wa.gov/PestFert/Pesticides/WastePesticide.aspx. Cleaned containers may also be disposed of in a sanitary landfill, if permitted by the county. Burning is not a legal method of container disposal in Washington.
