DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. This label must be in the possession of the user at the time of pesticide application. Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.

DIRECTIONS FOR USE FOR CANOLA SEED PRODUCTION

Liberty® 280 SL Herbicide may be used in canola seed propagation as a foliar spray to selectively eliminate canola plants that do not carry a gene that imparts tolerance to glufosinate-ammonium and as such, can be applied to remove susceptible segregates during canola seed propagation. Breeding material not possessing the glufosinate-ammonium tolerance gene will be severely injured or killed if treated with this herbicide.

Apply Liberty® 280 SL Herbicide only to canola labeled as LibertyLink®. Uniform, thorough spray coverage is necessary to achieve consistent activity.

APPLICATION RATE AND TIMING

Up to three applications of Liberty® 280 SL Herbicide at up to 22 fl oz/A per application may be made to canola for seed production. Applications may be made from the cotyledon stage up to the early bolting stage (e.g., BBCH 18 - 30, between just prior to stem elongation/bolting, eight or more leaves and beginning of stem elongation, no internodes).

RESTRICTIONS/PRECAUTIONS TO THE DIRECTIONS FOR USE ON CANOLA SEED PRODUCTION

- **DO NOT** enter or allow worker entry into treated areas during the restricted entry-interval (REI) of 12 hours.
- **DO NOT** apply more than three applications of Liberty® 280 SL Herbicide at up to 22 fl oz/A per application per growing season.
- **DO NOT** apply more than 66 fl oz/A of Liberty® 280 SL Herbicide per growing season.
- **DO NOT** apply Liberty® 280 SL Herbicide beyond the early bolting stage or within 65 days of harvesting canola seed.
- **DO NOT** use treated canola seed for food, feed or oil purposes.
- **DO NOT** apply Liberty® 280 SL Herbicide if canola shows injury from prior herbicide applications or environmental stress (drought, excessive rainfall, etc.).
- **DO NOT** apply this product through any type of irrigation system.
- Refer to the “Rotational Crop Restrictions” section under the “Information” heading of the Liberty® 280 SL Herbicide label for the appropriate rotational crop plant back intervals.

**WSDA Container Disposal Guidance:** Pesticide containers must be properly cleaned prior to disposal. The best time to clean empty pesticide containers is during mixing and loading, because residue can be difficult to remove after it dries. Triple rinse (or pressure rinse) the pesticide container, empty all pesticide rinse water into the spray tank, and apply to a labeled crop or site. Recycling cleaned containers is the best method of container disposal. Information regarding the recycling of empty and cleaned plastic pesticide containers in Washington is available on the WSDA Waste Pesticide Program website at [http://agr.wa.gov/PestFert/Pesticides/WastePesticide.aspx](http://agr.wa.gov/PestFert/Pesticides/WastePesticide.aspx). Cleaned containers may also be disposed of in a sanitary landfill, if permitted by the county. Burning is not a legal method of container disposal in Washington.
