FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF WASHINGTON

MANZATE® PRO-STICK FUNGICIDE

FOR USE ON PEARS FOR SUPPRESSION OF PEAR PSYLLA NYMPHS

EPA Reg. No. 70506-234  EPA SLN No. WA-120007

This label for MANZATE PRO-STICK expires and must not be distributed or used in accordance with this SLN registration after December 31, 2017.

ATTENTION

• It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
• This label must be in the possession of the user at the time of application.
• Follow all applicable use directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.

DIRECTIONS FOR USE

Crop: Pear

Pest: Pear psylla nymphs (suppression)

Application rate and timing: Apply 8 pounds of product (6 lb ai) per acre. Begin thorough coverage applications at early bloom (pink) or at first signs of psylla activity. Reapply as needed on a 7- to 10-day interval and discontinue after petal fall. Do not apply more than three applications per acre per season.

Method of application: Apply as a broadcast foliar spray by ground equipment calibrated to deliver a minimum of 50 gallons per acre to trees 10 feet tall or less. For trees greater than 10 feet use a minimum of 100 gallons per acre. See package label for use directions and restrictions for ground applications.

Restrictions / Precautions:

• Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours.
• Do not combine or integrate this use with the “Extended Application Schedule” found on the federally approved label.
• Do not apply after petal fall.
• Do not apply within 77 days of harvest.
• Do not graze livestock in treated areas.
• Do not apply more than 24 pounds MANZATE PRO-STICK (18 lb ai) per acre per season.
• For use under this SLN label, do not apply this product using aerial application equipment or through any type of irrigation system.

Aquatic Toxicity: This pesticide is toxic to aquatic organisms. MANZATE PRO-STICK should not be used under this SLN label where impact on listed threatened or endangered species is likely. You may refer to the WSDA Endangered Species Program web site at http://agr.wa.gov/PestFert/NatResources/EndangSpecies.aspx or contact the Washington Department of Fish & Wildlife, National Marine Fisheries Service (NOAA Fisheries) or US Fish & Wildlife Service for information regarding aquatic species listed as threatened or endangered. Consult the federal label for additional restrictions and precautions to protect aquatic organisms.
Requirements for Spray Drift Management:
A variety of factors including weather conditions (e.g. wind direction, wind speed, temperature, and relative humidity) and method of application can influence pesticide drift. The applicator must evaluate all factors and make appropriate adjustments when applying the product. Do not apply under conditions where possible drift to unprotected persons or to food, forage, or other plantings that might be rendered unfit for sale, use or consumption.

Do not make applications into areas of temperature inversions. Inversions are characterized by stable air and increasing temperatures with increasing distance above the ground. Mist or fog may indicate the presence of an inversion in humid areas. Where permissible by local regulations, the applicator may detect the presence of an inversion by producing smoke and observing the smoke layer near the ground surface.

All application equipment must be properly maintained and calibrated using appropriate carriers or surrogates. For airblast applications, turn off outward pointing nozzle at row ends and when spraying the outer two rows. To minimize spray loss over the top in orchard applications, spray must be directed into the canopy.

WSDA Container Disposal Guidance: Pesticide containers must be properly cleaned prior to disposal. The best time to clean empty pesticide containers is during mixing and loading, because residue can be difficult to remove after it dries. Triple rinse (or pressure rinse) the pesticide container, empty all pesticide rinse water into the spray tank, and apply to a labeled crop or site. Recycling cleaned containers is the best method of container disposal. Information regarding the recycling of empty and cleaned plastic pesticide containers in Washington is available on the WSDA Waste Pesticide Program web site at http://agr.wa.gov/PestFert/Pesticides/WastePesticide.aspx. Cleaned containers may also be disposed of in a sanitary landfill, if permitted by the county. Burning is not a legal method of container disposal in Washington.
