Flowable Insecticide

Active Ingredient % By Wt.
Imidacloprid; 1-[(6-Chloro-3-pyridinyl)methyl]-N-nitro-2-imidazolidinimine ........................................... 40.7%
Other Ingredients: .................................................................... 59.3%
Total:.......................................................................................... 100.0%
Contains 4 lbs. of active ingredient per gallon

Keep out of reach of children
CAUTION

EPA Reg. No. 83222-32
EPA Est. No. 53883-TX-002
69016-MS-001

Manufactured By:
Direct Ag Source, LLC
30473 260th Street • Eldora, IA 50627
FIRST AID

IF SWALLOWED:
- Call a poison control center or doctor immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- Do not induce vomiting unless told to do so by a poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

IF ON SKIN OR CLOTHING:
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for treatment advice.

IF INHALED:
- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.
- Call a poison control center or doctor for further treatment advice.

IF IN EYES:
- Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

Have the product container or label with you when calling a poison control center or doctor or going for treatment. You may also contact 1-800-222-1222 for emergency medical treatment information.

Note to Physician: No specific antidote is available. Treat the patient symptomatically.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION
Harmful if swallowed, absorbed through skin, or inhaled. Avoid breathing vapor or spray mist. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reuse.

PERSONAL PROTECTIVE EQUIPMENT (PPE)
Applicators and other handlers must wear:
Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for Category C on an EPA chemical-resistance category selection chart.
- Long-sleeved shirt and long pants
- Chemical-resistant gloves made of any waterproof material such as barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinyl chloride (PVC), or Viton
- Shoes plus socks

Follow manufacturer’s instructions for cleaning/maintaining personal protective equipment, PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS STATEMENT
When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 170.240(d)(4-6)), the handler PPE requirements may be reduced or modified as specified in the WPS.
USER SAFETY RECOMMENDATIONS

Users should:
- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters.

This product is highly toxic to bees exposed to direct treatment or residues on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops or weeds if bees are visiting the treatment area. This product is toxic to wildlife and highly toxic to aquatic invertebrates. This chemical demonstrates the properties and characteristics associated with chemicals detected in ground water. The use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in ground water contamination.

When used as a seed treatment: Treated seed exposed on soil surface may be hazardous to birds.

For Commercial Seed Treatment Facilities: Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans, or other waters unless in accordance with the requirements of a National Pollutant discharge elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional office of the EPA.

OBSERVE THE FOLLOWING PRECAUTIONS WHEN MIXING AND APPLYING IN THE VICINITY OF AQUATIC AREAS SUCH AS LAKES, RESERVOIRS, RIVERS, PERMANENT STREAMS, MARSHES OR NATURAL PONDS, ESTUARIES, AND COMMERCIAL FISH FARM PONDS.

 Spray Drift Management

The interaction of many equipment- and weather-related factors determine the potential for spray drift. The applicator is responsible for considering all of these factors when making application decisions. Avoiding spray drift is the responsibility of the applicator.

 Importance of Droplet Size

An important factor influencing drift is droplet size. Small droplets (<150-200 microns) drift to a greater extent than large droplets. Within typical equipment specifications, applications should be made to deliver the largest droplet spectrum that provides sufficient control and coverage. Formation of very small droplets may be minimized by appropriate nozzle selection.

Wind Speed Restrictions

Drift potential increases at wind speeds of less than 3 mph (due to inversion potential) or more than 10 mph. However, many factors, including droplet size, canopy, and equipment specifications determine drift potential at any given wind speed. Do not apply when winds are greater than 15 mph and avoid gusty and windless conditions. Risk of exposure to sensitive aquatic areas can be reduced by avoiding applications when wind direction is toward the aquatic area.

Restrictions During Temperature Inversions

Do not make aerial or ground applications during temperature inversions. Drift potential is high during temperature inversions. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain close to the ground and move laterally in a concentrated cloud. Temperature inversions are characterized by increasing temperature with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however if fog is not present, inversions can also be identified by the movement of smoke from a ground source. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical mixing.
No-Spray Zone Requirements for Soil and Foliar Applications
Do not apply by ground within 25 feet or by air within 150 feet of lakes, reservoirs, rivers, permanent streams, marshes or natural ponds, estuaries, and commercial fish farm ponds.

Runoff Management
Do not cultivate within 10 feet of the aquatic areas to allow growth of a vegetative filter strip. When using S-Clopid 4 AG on erodible soils employ the best management practice for minimizing runoff. Consult your local Natural Resources Conservation Service for recommendations in your use area.

Endangered Species Notice
Under the Endangered Species Act, it is a federal offense to use any pesticide in a manner that results in the death of a member of an endangered species. Consult your local county bulletin, County Extension Agent, or Pesticide State Lead Agency for information concerning endangered species in your area.

Resistance Management
Some insects are known to develop resistance to insecticides after repeated use. As with any insecticide, the use of this product should conform to resistance management strategies established for the use area.
S-Clopid 4 AG contains a Group 4A insecticide. Insect biotypes with acquired or inherent tolerance to Group 4A insecticides may eventually dominate the insect population if Group 4A insecticides are used repeatedly as the predominant method of control for targeted species. This may eventually result in partial or total loss of control of those species by S-Clopid 4 AG and to other Group 4A insecticides.
The active ingredient in S-Clopid 4 AG is a member of the neonicotinoid chemical class. Insect pests resistant to other chemical classes have not shown cross-resistance to S-Clopid 4 AG. In order to maintain susceptibility to this class of chemistry in insect species with high resistance development potential, it is recommended that for each crop season: 1) only a single, soil application of S-Clopid 4 AG be made; 2) foliar applications of products from the same class not be made following a long residual, soil application of S-Clopid 4 AG, or other neonicotinoid products.
If a soil application of S-Clopid 4 AG has not been made during a crop season and foliar applications are to be made, avoid using a block of more than three consecutive applications of S-Clopid 4 AG and/or other Group 4A products having the same or similar mode of action. Following a neonicotinoid block of treatments, Direct Ag Source, LLC strongly encourages the rotation to a block of applications with effective products with a different mode of action before using additional applications of neonicotinoid products. Using a block rotation or windowed approach, along with other IPM practices, is considered an effective use strategy for preventing or delaying an insect’s ability to develop resistance to this class of chemistry.
Do not use foliar applications of S-Clopid 4 AG or other Group 4A products from the neonicotinoid chemical class on crops previously treated with a long residual, soil-applied product from the neonicotinoid chemical class.
Other Group 4A, neonicotinoid products used as foliar treatments include: Actara, Assail, Cadapuo, Centric, Clutch, Couraze, Gaiant, Impulse, Intruder, Leverate, Nuprid, Pasado, Provado, Treflan Pro, and Venom.
Other Group 4A, neonicotinoid products used as soil/seed treatments include Admire Pro, Advise, Alais, Belay, Couraze, Cruiser, Gaucho, Macho, Macho Max, Nuprid, Platinum, Venom, and Widow.
Contact your Cooperative Extension specialist, certified crop advisor, and/or product manufacturer for additional insect resistance management recommendations. Also, for more information on Insect Resistance Management (IRM), visit the Insecticide Resistance Action Committee (IRAC) on the web at http://www.irac-online.org/.
DIRECTIONS FOR USE
It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the Agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS
Use this product in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry intervals. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours. Exception: If the product is soil injected or soil incorporated, or once the treated seed is planted in soil or other planting media, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:
- Coveralls
- Chemical resistant gloves made of any waterproof material such as barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinylchloride (PVC), or Viton
- Shoes plus socks

APPLICATION INSTRUCTIONS
S-Coprid 4 AG is a flowable insecticide for the control and suppression of a variety of listed insect pests. S-Coprid 4 AG may be applied as a soil treatment to cotton, tobacco, cucurbit vegetables, greenhouse vegetables, head and brassica vegetables, leafy vegetables, legume vegetables, root and tuberous vegetables, strawberries, sugarbeets, bushberries, citrus, grapes, hops, pome fruit, stone fruit, tropical fruit, tree nuts, and other listed crops. S-Coprid 4 AG may also be applied as a foliar treatment on cotton, soybeans, tobacco, leafy vegetables, fruiting vegetables, legume vegetables, root vegetables, tuberous and corn vegetables, strawberries, bushberries, bananas and plantains, pome fruits, citrus, grapes, stone fruits, tropical fruits, pomegranates, coffee, hops, Christmas trees, and tree nuts, and as a seed piece treatment for potatoes.

Do not apply more than 0.5 lb. active ingredient per acre per crop season regardless of formulation or method of application, unless specified within a crop-specific application section for a given crop.

Mixing Instructions
To prepare the application mixture, add a portion of the required amount of water to the spray tank and with agitation, add S-Coprid 4 AG. Complete filling tank with balance of water needed. Maintain sufficient agitation during both mixing and application. S-Coprid 4 AG may also be used with other pesticides and/or fertilizer solutions. Please see “Compatibility” section of this label. When tank mixtures of S-Coprid 4 AG and other pesticides are involved, prepare the tank mixture as recommended above and follow suggested “Mixing Order” below.

Mixing Order
When pesticide mixtures are needed, add wettable powders or wettable granules first, S-Coprid 4 AG and other suspension concentrate (flowable) products second, and emulifiable concentrates last. Ensure good agitation as each component is added. Do not add an additional component until the previous is thoroughly mixed. If a fertilizer solution is added, a fertilizer/pesticide compatibility agent may be needed. Maintain constant agitation during both mixing and application to ensure uniformity of spray mixture.
Compatibility
Test compatibility of the intended mixture before adding S-Ciprod 4 AG to the spray or mix tank. Add proportionate amounts of each ingredient in the appropriate order to a pint or quart jar, cap, shake for 5 minutes, and let set for 5 minutes. Do not use if product does not mix well or forms precipitates that do not readily disperse.

CHEMIGATION
Types of Irrigation Systems: Chemigation applications of S-Ciprod 4 AG may be made to crops through chemigation systems if specified in crop-specific application sections. Applications of S-Ciprod 4 AG may only be made to crops through low-pressure systems. Do not apply S-Ciprod 4 AG through any other type of irrigation system.

Uniform Water Distribution and System Calibration: The irrigation system must provide uniform distribution of treated water. Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water. The system must be calibrated to uniformly apply the rates specified. If you have questions about calibration, you should contact Cooperative Extension Service specialists, equipment manufacturers, or other experts.

Chemigation Monitoring: A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Drift: Do not apply when wind speed favors drift beyond the area intended for treatment.

Required System Safety Devices: The system must contain a functional check valve, vacuum relief valve, and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected. Systems must use a metering pump such as a positive displacement injection pump (e.g. diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Using Water from Public Water Systems: Public water systems means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year. Chemigation systems connected to public water systems must contain a functional reduced-pressure zone, back flow preventer (RPZ), or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and to top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe. The pesticide injection pipeline must contain a functional automatic quick-closing check valve to prevent the flow of fluid back toward the injection. The pesticide injection pipeline must contain a functional normally closed solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected. Systems must use a metering pump such as a positive displacement injection pump (e.g. diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
ROTATIONAL CROPS*

Treated areas may be replanted with any crop specified on an imidacloprid label, or any crop for which a tolerance exists for the active ingredient, as soon as practical following the last application. For crops not listed on an imidacloprid label, or for crops for which no tolerances for the active ingredient have been established, a 10-month plant-back interval is required.

**IMMEDIATE PLANT-BACK:**
All crops on this label plus the following crops not on this label: barley, canola, corn (field, pop, and sweet), rapeseed, sorghum, sugarbeet, and wheat.

**30-DAY PLANT-BACK:**
Cereals (including buckwheat, millet, oats, rice, rye, and triticale), soybeans, and safflower.

**10-MONTH PLANT-BACK:**
Onion and bulb vegetables.

**12-MONTH PLANT-BACK:**
All Other Crops

* Cover crops for soil building or erosion control may be planted any time, but do not graze or harvest for food or feed.

**FOLIAR APPLICATION**

Apply S-Clorpid 4 AG with properly calibrated ground or aerial application equipment. Minimum recommended spray volumes are 10 gallons per acre by ground application and 5 gallons per acre through aerial equipment. As pest pressure develops, apply the appropriate rate as a broadcast or directed spray to the target pest. For best control, ensure thorough coverage of entire plant. Retreat if needed.

Use lower rates early in the season when pest pressure is low or when tank-mixing with other insect control products. The level of control or suppression is determined by the stage of pest development and infestation level at the time of application. S-Clorpid 4 AG is most effective against insects in the early instar and early nymphal stages, as well as bollworm/budworm eggs. If coverage is not thorough, activity and control will be diminished. To ensure faster activity and optimum overall control, apply at the higher gallonage. To enhance coverage, use an organosilicone-based spray additive.

Regardless of formulation or method of application, apply not more than 0.5 lb. of active ingredient per acre per season, including seed treatment, soil and foliar uses.
### FIELD CROPS

#### COTTON

**Pests Controlled**
- Cotton aphid, Cotton fleahopper, Banded-winged whitefly, Plant bugs (includes Lygus hesperus), Green Stink bug, Southern green stink bug, Bollworm/Spodoptera (ovisidal effect)

**Rate:** Fluid ounces per acre
- 0.9 – 1.8

**Pests Suppressed**
- Lygus bug (Lygus hesperus), Whiteflies (other than banded-winged whitefly)

**Restrictions:**
- Pre-Harvest Interval (PHI): 14 days
- Minimum interval between applications: 7 days
- Maximum foliar-applied product allowed per crop season: 8.9 fluid ounces S-Clopid 4 AG per acre or 0.31 lb ai/A of any imidacloprid product.
- Do not graze treated fields after application of S-Clopid 4 AG

---

### Tank Mix Instructions

**Pests Controlled (In Addition to Pests Listed Above)**
- S-Clopid 4 AG
- Rate fluid ounces per acre: 0.9 – 1.35
- Bidrin® 8
- Rate fluid ounces per acre: 1.6 – 3.2

**Early Season Control:**
- Thrips

**Mid to Late Season Control:**
- Plant bugs, Stink bugs (including Brown stink bug), Grasshoppers, Saltmarsh caterpillar, Cotton leaf perforator

**Restrictions:**
- Refer to the Bidrin® 8 product label for specific use instructions; observe all restrictions and precautions that appear on the label.

---

### POTATO

**Pests Controlled**
- Aphids, Colorado potato beetle, Flea beetles, Leafhoppers, Potato Psyllid

**Rate:** Fluid ounces per acre
- 1.52

**Restrictions:**
- Pre-Harvest Interval (PHI): 7 days
- Minimum interval between applications: 7 days
- Maximum foliar-applied product allowed per crop season: 6.4 fluid ounces S-Clopid 4 AG per acre or 0.2 lb ai/A of any imidacloprid product.

**Applications:** Apply as a broadcast or directed foliar spray to an infested area as insect population begins to build. Thorough coverage is necessary for good control. Use of a spray adjuvant as directed on the adjuvant label may improve coverage. S-Clopid 4 AG alone may not provide knockdown for heavy or established populations. A second application may be required for adequate control, if indicated by scouting. Tank mixing with other insecticides labeled for this use may improve knockdown and control of additional insects.
TOBACCO

<table>

<tr>
<td>Pepper weevil</td>
<td>2.4</td>
</tr>
</tbody>
</table>

Restrictions:
- Pre-Harvest Interval (PHI): 0 days
- Minimum interval between applications: 5 days
- Maximum foliar-applied product allowed per crop season: 7.6 fluid ounces S-Clopid 4 AG per acre or 0.24 lb ai/a of any imidacloprid product.
- Do not use on crops grown for seed.

Applications: Apply as a broadcast or directed foliar spray to an infested areas as insect population begins to build. Thorough coverage is needed for good control. Use of a spray adjuvant as directed on the adjuvant label may improve coverage. S-Clopid 4 AG alone may not provide knockdown for heavy or established populations. A second application may be required for adequate control, if indicated by scouting. Tank mixing with other insecticides labeled for this use may improve knockdown and control of additional insects.

Use the higher rates for adult whitefly.
For Pepper weevil, apply only with ground equipment before a damaging insect population becomes established. Use S-Clopid 4 AG in a full-season program that includes use of different classes of chemistry and modes of action in a blocked or windowed approach. Consult an extension specialist or crop advisor for further detail.

NOTES: Crop groupings established by US EPA are subject to change. Refer to the EPA website (www.epa.gov/pesticides) for current information.
LEAFY VEGETABLES
Crops of Subgroup 4A including: Amaranth (leafy amaranth, Chinese spinach), Arugula (Ratquette), Chervil, Chrysanthemum (edible leaved and garland), Corn salad, Cress (garden, winter, upland, yellow rocket), Dandelion, Dock (sorrel), Endive (escarole), Lettuce (head and leaf), Oregano, Purslane, Purslane (green, garden and winter), Radicchio (red chicory), Spinach (including New Zealand and vine (Malabar, Indian), Watercress (upland), Watercress (commercial production only - do not apply to native watercress in streams or other bodies of water)

</table>

Restrictions:
- Pre-Harvest Interval (PHI): 7 days
- Minimum interval between applications: 5 days
- Maximum foliar-applied product allowed per crop season: 7.6 fluid ounces 5-Clopid 4 AG per acre or 0.24 lb ai/A of any imidacloprid product.
- Do not use on crops grown for seed.

Applications: Apply as a broadcast or directed foliar spray to infested areas as insect population begins to build. Thorough coverage is needed for good control. Use of a spray adjuvant as directed on the adjuvant label may improve coverage. 5-Clopid 4 AG alone may not provide knockdown for heavy or established populations. A second application may be required for adequate control, if indicated by scouting. Tank mixing with other insecticides labeled for this use may improve knockdown and control of additional insects.

Use the higher rates for adult whiteness.

For applications made to watercress, production fields must be drained of water at least 24 hours prior to application, and water must not be reapplied to the field for a minimum of 24 hours following the application. Apply only to fully leafed canopies.

NOTES: Crop groupings established by US EPA are subject to change. Refer to the EPA website (www.epa.gov/pesticides) for current information.

Applications: Apply as a broadcast or directed foliar spray to infested areas as insect population begins to build. Thorough coverage is needed for good control. Use of a spray adjuvant as directed on the adjuvant label may improve coverage. S-Cioprid 4 AG alone may not provide knockdown for heavy or established populations. A second application may be required for adequate control, if indicated by scouting. Tank mixing with other insecticides labeled for this use may improve knockdown and control of additional insects.

Notes: Crop groupings established by US EPA are subject to change. Refer to the EPA website [www.epa.gov/pesticides](http://www.epa.gov/pesticides) for current information.
### ROOT VEGETABLES

**Crops of Subgroup 1B except Sugarbeet including:** Garden Beets, Edible Burdock, Carrots, Celery, Chervil (turnip-rooted), Chicory, Gingko, Horseradish, Parsley (turnip-rooted), Parsnip, Oriental radish (daikon), Radish, Salal (oyster plant), Black Salsify, Spanish Salsify, Skirret, and Turnip

<table>

<tbody>
<tr>
<td>Aphids, Flea beetles, Leafhoppers, Whiteflies</td>
<td>1.4</td>
</tr>
</tbody>
</table>

**Restrictions:**
- Not for use in California
- Pre-Harvest Interval (PHI): 7 days
- Minimum interval between applications: 5 days
- Maximum foliar-applied product allowed per crop season: 1.4 fluid ounces S-Clorpid 4 AG per acre or 0.044 lb ai/A of any imidacloprid product; on other crops, 4.2 fluid ounces or 0.13 lb ai of any imidacloprid product per acre.
- Maximum number of applications of this or other imidacloprid product per season is 1 for radishes, 3 for other crops.
- Do not use on crops grown for seed.

**Applications:** Apply as a broadcast or directed foliar spray to infested areas as insect population builds up. Thorough coverage is needed for good control. Use of a spray adjuvant as directed on the adjuvant label may improve coverage. S-Clorpid 4 AG alone may not provide knockdown for heavy or established populations. A second application may be required for adequate control, if indicated by scouting. Tank mixing with other insecticides labeled for this use may improve knockdown and control of additional insects.

**Notes:** Crop groupings established by US EPA are subject to change. Refer to the EPA website [www.epa.gov/pesticides](http://www.epa.gov/pesticides) for current information.

### TUBEROUS and CORM VEGETABLES

**Crops of Subgroup 1C including:** Artichoke (Chinese and Jerusalem), Canna (edible, Queensland arrowroot), Cassava (bitter and sweet), Chayote (root), Chufa, Dracaena (taro), Ginger,Lotus, Sweet potatoes, Taro, Yam bean (jacarana, manioc pea), True Yams

<table>

<td>2.4 to 3.2</td>
</tr>
</tbody>
</table>

Restrictions:
- Pre-Harvest Interval (PHI): 3 days
- Minimum interval between applications: 7 days
- Maximum foliar-applied product allowed per crop season: 16 fluid ounces S-Clopid 4 AG per acre or 0.5 lb ai/A of any imidacloprid product.
- Maximum number of foliar applications per year is 5.
- Minimum application volume: 20 gallons per acre by ground, 5 gallons per acre by air.
- Do not apply pre-bloom or during bloom or when bees are actively foraging.

Applications: Apply as a broadcast or directed foliar spray to infested areas as insect population begins to build. Thorough coverage is needed for good control. Use of a spray adjuvant as directed on the adjuvant label may improve coverage. S-Clopid 4 AG alone may not provide knockdown for heavy or established populations. A second application may be required for adequate control, if indicated by scouting.

Tank mixing with other insecticides labeled for this use may improve knockdown and control of additional insects.

Notes: Crop groupings established by US EPA are subject to change. Refer to the EPA website (www.epa.gov/pesticides) for current information.

CITRUS
Crops of Group 10 Including: Calamondin, Citrus citron, Citrus hybrids (includes chironja, tangelo, and tangor), Grapefruit, Kumquat, Lemon, Lime, Mandarin, Tangerine, Pummelo, Orange (sweet and sour), Satsuma mandarin, Tangelos, White sapote (Casimiroa spp.), and other cultivars of these.

</thead>
<tbody>
<tr>
<td>Plum Curculio, Stink Bugs</td>
</tr>
</tbody>
</table>

**Restrictions:**

- Apricots, nectarines, peaches
- Pre-Harvest Interval (PHI): 0 days
- Minimum interval between applications: 7 days
- Maximum foliar-applied product allowed per crop season: 9.6 fluid ounces S-Clopid 4 AG or 0.3 lb ai/A of any imidacloprid product.
- Minimum water volume 50 gallons per acre by ground, 25 gallons per acre by air.
- Do not apply pre-bloom or during bloom or when bees are actively foraging.

(continued)
STONE FRUIT (continued)

Cherries, plums, plumcots, prunes
- Pre-Harvest Interval (PHI): 7 days
- Minimum interval between applications: 10 days
- Maximum foliar-applied product allowed per crop season: 16 fluid ounces S-Clopid 4 AG or 0.5 lb ai/A of any imidaclopid product.
- Minimum water volume 50 gallons per acre by ground, 25 gallons per acre by air.
- Do not apply pre-bloom or during bloom or when bees are actively foraging.

Applications: Rates are based on fully-grown mature trees. Apply as a broadcast or directed foliar spray to infested areas as insect population begins to build. Thorough coverage is needed for good control. Apply in a water volume of at least 50 gallons per acre by ground or 25 gallons per acre by air. Use of a spray adjuvant as directed on the adjuvant label may improve coverage. S-Clopid 4 AG alone may not provide knockdown for heavy or established populations. A second application may be required for adequate control, if indicated by scouting. Tank mixing with other insecticides labeled for this use may improve knockdown and control of additional insects. Aerial application may result in slower activity and reduce control relative to application using ground equipment.

Notes: Crop groupings established by US EPA are subject to change. Refer to the EPA website (www.epa.gov/pesticides) for current information.

TREE NUTS
Crop of Group 14 including: Almond, Beechnut, Brazil nut, Butternut,Cashew, Chestnut, Chinquapin, Fisert, Hickory nut, Macadamia nut, Pecan, Pinchus, Walnut (black and English)

<table>
<thead>
<tr>

CHRISTMAS TREES

<table>
<thead>
<tr>
<th>Pest Controlled</th>
<th>Rate: Fluid ounces per acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aphids, Adeleips, Sawflies</td>
<td>1.6 to 3.2</td>
</tr>
</tbody>
</table>

Restrictions:
- Minimum interval between applications: 7 days
- Maximum foliar-applied product allowed per crop season: 10 fluid ounces S-Clopid 4 AG or 0.5 lb ai/A of any imidacloprid product.

Applications: Apply as a broadcast or directed foliar spray to infested areas as insect population begins to build. Thorough coverage is needed for good control. Use of a spray adjuvant as directed on the adjuvant label may improve coverage. S-Clopid 4 AG alone may not provide knockdown for heavy or established populations. A second application may be required for adequate control, if indicated by scouting. Tank mixing with other insecticides labeled for this use may improve knockdown and control of additional insects.

For gall-forming adelips, time applications to coincide with a full bud-swell of the earliest bud-breaking trees. Treatment will be ineffective once galls are formed.
## POPLAR (Populus) SPECIES GROWN FOR TIMBER (including cottonwood)

<table>
<thead>
<tr>
<th>Pest Controlled</th>
<th>Rate: Fluid ounces per acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aphids, Leaf Beetles</td>
<td>1.0 to 3.2</td>
</tr>
</tbody>
</table>

### Restrictions:
- Not for use in California
- Minimum interval between applications: 10 days
- Maximum foliar-applied product allowed per crop season: 16 fluid ounces S-Clopid 4 AG or 0.5 lb ai/A of any imidacloprid product.
- Do not apply pre-bloom or during bloom or when bees are actively foraging.

### Applications:
- Apply as a broadcast or directed foliar spray to infested areas as insect population begins to build. Thorough coverage is needed for good control. Use of a spray adjuvant as directed on the adjuvant label may improve coverage. S-Clopid 4 AG alone may not provide knockdown for heavy or established populations. A second application may be required for adequate control, if indicated by scouting. Tank mixing with other insecticides labeled for this use may improve knockdown and control of additional insects.

### SOIL APPLICATION

For soil applications of S-Clopid 4 AG, direct product into the seed or root-zone of crop. Failure to place S-Clopid 4 AG into root-zone may result in loss of control or delay in onset of activity. S-Clopid 4 AG may be applied with ground or chemigation application equipment. Use only broadcast foliar application to seedling flats or trays, or where product is intended to be washed from foliage to soil prior to drying on foliage.

Optimum activity of S-Clopid 4 AG results from application to the root-zone of plants to be protected. The earlier S-Clopid 4 AG is available to a developing plant, the earlier the protection begins. S-Clopid 4 AG is continuously taken into the roots over a long period of time and the systemic nature of S-Clopid 4 AG allows movement from roots though the xylem tissue to all vegetative parts of the plant. This results in extended residual activity of S-Clopid 4 AG, the control of insects, and the prevention and/or reduction of insects that may carry viruses. The rate of S-Clopid 4 AG applied affects the length of the plant protection period. Use higher rates when infestations occur later in crop development or where pest pressure is continuous. S-Clopid 4 AG will generally not control insects infesting flowers, blooms, or fruit. Additional crop protection may be required for insects feeding on or on these plant parts, and for insects not listed in the crop-specific, pests-controlled sections of this label. Additional, specific S-Clopid 4 AG application instructions are also provided in the crop-specific sections of this label.

Suppression, or less than complete control of certain diseases and insect pests including reduced feeding may also result from a S-Clopid 4 AG application. Refer to the following crop use tables for specific pests controlled or suppressed. Control of these pests/diseases may require supplemental control measures.

### Restrictions:
- Do not use S-Clopid 4 AG on crops grown for production of true seed intended for private or commercial planting unless allowed under state specific, supplemental labeling.
- Minimize exposure of S-Clopid 4 AG to honey bees and other pollinators. Consult Cooperative Extension Service, PCAs, consultants, or local Direct Ag Source, LLC representatives for application on these types of crops.
- Do not apply more than 0.5 lb. active ingredient per acre per crop season regardless of formulation or method of application.
### FIELD CROPS

#### COTTON

<table>
<thead>
<tr>
<th>Pests Controlled</th>
<th>Rate: Fluid ounces per 1000 row-feet</th>
<th>Rate: Fluid ounces per acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cotton aphid, Plant bugs, Thrips, Whiteflies</td>
<td>0.05</td>
<td>8.5 – 10.55 (depending on row-spacing)</td>
</tr>
</tbody>
</table>

**Restrictions:**
- Maximum soil-applied product allowed per crop season: 10.55 fluid ounces S-Clopid 4 AG or 0.33 lb ai/acre of any imidacloprid product.
- Maximum number of S-Clopid 4 AG applications per year: 6
- Do not graze treated fields after any application of S-Clopid 4 AG. See Resistance Management Section of this label.

### PEANUT

<table>
<thead>
<tr>

<tbody>
<tr>
<td>Thrips</td>
<td>6.0 – 12.0</td>
</tr>
</tbody>
</table>

**Restrictions:**
- Pre-Harvest Interval (PHI): 14 days
- Maximum soil-applied product allowed per crop season: 12 fluid ounces S-Clopid 4 AG or 0.38 lb ai/acre of any imidacloprid product.

**Applications:** Apply specified dosage in one of the following methods:
- In-furrow spray during planting directed on or below seed.
- Chemigation into root zone through low-pressure drip or trickle irrigation.

**Important Note**
Increases in Tomato spotted wilt virus (TSWV) incidence have been observed with application of imidacloprid flowable products on multiple varieties of peanut. This may also be the case with other tospoviruses, or other viruses transmitted by various thrips species or perhaps, other pests. Prior to application of S-Clopid 4 AG to peanuts, consult with the State Cooperative Extension Service representative for recommendations. Growers are advised to weigh insect control benefits against potential increase in viral disease levels. In areas where TSWV or tospoviruses are epidemic, growers are encouraged to use virus resistant varieties and consult the University of Georgia Tomato spotted wilt virus index before applying S-Clopid 4 AG.
### POTATO

<table>
<thead>

<td>6.5-10.0</td>
</tr>
</tbody>
</table>

**Restrictions:**
- Maximum soil-applied product allowed per crop season: 10.0 fluid ounces S-Clopid 4 AG or 0.31 lb ai/A of any imidacloprid product.
- Applications: Apply specified dosage in one of the following methods:
  - In-furrow spray during planting directed on seed pieces or seed potatoes.
  - Subsurface side-dress on both sides of the row covered with 3 or more inches of soil.
  - Narrow band spray at ground cracking directly over the row during hilling covered with 3 or more inches of soil.
  - Narrow band directly below the eventual seed row in a bedding operation 7 or fewer days before planting. For effective pest control or suppression, S-Clopid 4 AG applications must be placed below soil-surface and in contact with seed piece or within root-zone. For potatoes grown on highly permeable soils with shallow water table, at-plant applications of S-Clopid 4 AG may be made in a 2 to 4 inch band (width of planter shoe opening) and completely covered.

### TOBACCO

<table>
<thead>
<tr>

<th>Rate: Fluid ounces per 1000 plants (in-furrow or transplant-water)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cutworms Symptomsof: Tomato spotted wilt virus (TSWV)</td>
<td>0.7-1.4</td>
<td>0.9-1.4</td>
</tr>
</tbody>
</table>

**Restrictions:**
- Pre-Harvest Interval (PHI): 14 days
- Maximum soil-applied product allowed per crop season: 16.0 fluid ounces S-Clopid 4 AG or 0.5 lb ai/A of any imidacloprid product.
- Applications: Apply specified dosage in one of the following methods:
  - Uniform, broadcast foliar spray to seedlings in trays (tray drench) not more than 7 days prior to transplanting followed immediately by overhead irrigation to wash S-Clopid 4 AG from foliage into potting media. Failure to wash S-Clopid 4 AG from foliage may result in a reduction in pest control. Handle transplants carefully during setting to avoid dislodging treated potting media from roots.
  - In-furrow spray or transplant-water drench during setting.
  - Chemigation into root-zone through low-pressure drip, trickle, micro-sprinkler, or equivalent equipment.
- Important Note: Proper tray drench applications of S-Clopid 4 AG have been shown to be the most efficacious method of application. However, the specified rate of S-Clopid 4 AG may be applied as combination of the tray drench in the planthouse and/or transplant-water drench in field. Adverse growing conditions may cause a delay in uptake of S-Clopid 4 AG into the plant and a delay in control.
VEGETABLE AND SMALL FRUIT CROPS
CUCURBIT VEGETABLES
Crops of Group 9 Including: Chayote (fruit), Chinese waxgourd (Chinese preserving melon), Citron melon, Cuban pumpkin, Cucumber, Gherkin, Gourd (edible, includes hydnan, cuscuzza, techima, Chinese okra), Momordica sp. (includes balsam apple, balsam pear, bitter melon, Chinese cucumber), Muskmelon (hybrids and/or cultivars of Cucumis melo including true cantaloupe, cantaloupe, casaba, Crenshaw melon, golden pershaw melon, honeydew melon, honey balls, mango melon, Persian melon, pineapple melon, Santa Claus melon, snake melon, and Winter melon), Pumpkin, Squash (includes summer squash types such as: butternut squash, calabaza, crookneck squash, hubbard squash, scallop squash, straightneck squash, vegetable marrow and zucchini, and winter squash types such as acorn squash and spaghetti squash), Watermelon (includes hybrids and/or varieties of Citrullus lanatus)

Field Application Instructions. See details below for additional planthouse instructions.

</thead>
<tbody>
<tr>
<td>Aphids, Cucumber beetles, Leafhoppers, Thrips (foliage feeding Thrips only), Whiteflies</td>
<td>8.0-12.0</td>
</tr>
</tbody>
</table>

Pests/ Diseases Suppressed
Bacterial wilt (as vectored by various cucumber beetles), Leaf silverying resulting from whitefly feeding | 8.0-12.0

Restrictions:
- Pre-Harvest Interval (PHI): 21 days
- Maximum soil-applied product allowed per application: 12.0 fluid ounces S-Clopid 4 AG or 0.38 lb ai/A of any imidacloprid product.
- Applications: Apply the specified dosage in one of the following methods:
  - Chemigation into root zone through low- pressure drip, trickle, micro-sprinkler, or equivalent equipment.
  - In-furrow spray directed on or below seed.
  - Narrow (2” or less) surface band spray over seed-line during planting incorporated to a depth of 1 to 1 ½ inches with sufficient irrigation within 24 hours of application.
  - Narrow band spray directly below eventual seed row in bedding operation 14 or fewer days before planting.
  - Post-seeding drench, transplant-water drench, or hill drench.
  - Subsurface side-dress on both sides of each row. S-Clopid 4 AG must be incorporated into root zone.

Planthouse Application Instructions (Not for use in California)

<table>
<thead>
<tr>
<th>Pest Controlled</th>
<th>Rate: Fluid ounces per 1000 plants</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aphids, Whiteflies</td>
<td>0.05</td>
</tr>
</tbody>
</table>

Restrictions:
- Maximum amount S-Clopid 4 AG applied in the planthouse: 0.05 fluid ounces S-Clopid 4 AG or 0.00156 lb ai/1000 plants
- Maximum number S-Clopid 4 AG applications in planthouse: 1
- Not for use on crops grown for seed.
Applications: Apply specified dosage to seedlings in trays in the planthouse, targeting soil media (tray drench), not more than 7 days prior to transplanting, in one of the following methods:

- Uniform, broadcast high-volume foliar spray, followed immediately by sufficient overhead irrigation to wash S-Clodiprid 4 AG from foliage into potting media without loss of gravitational liquid from the bottom of the tray. Failure to wash S-Clodiprid 4 AG from foliage may result in reduced pest control.
- Injection into overhead irrigation system, using adequate volume to thoroughly saturate soil media without loss of gravitational solution from the bottom of the tray.

The application made in the planthouse will only provide short-term protection and is not intended as a substitution for a field application. An additional field application must be made within 2 weeks following transplanting to provide continuous protection. Applications of higher rates or increased number of applications in planthouse may result in significant plant injury. Transplants should be handled carefully during setting to avoid dislodging treated potting media from roots.

Important Note: Not all varieties of cucurbit vegetables have been tested for tolerance to S-Clodiprid 4 AG applied to seedling flats. To check tolerance, treat a small number of plants and confirm tolerance for 7 days prior to treating entire planthouse.

FRUITING VEGETABLES
Crops of Group 8 plus Okra including: Eggplant, Ground cherry, Okra, Pepper (including bell, chili, cooking, pimento, and sweet) Tomato, Paprika, Tomatillo

Field Application Instructions. See details below for additional planthouse instructions.

</tr>
</tbody>
</table>

### Diseases Suppressed

- Tomato mottle virus, Tomato spotted wilt virus, Tomato yellow leaf curl virus
  - Okra and Pepper: 8.0-16.0, Other Crops: 8.0-12.0

### Restrictions:

- Pre-Harvest Interval (PHI): 21 days
- Maximum S-Clodiprid 4 AG allowed on pepper and okra crops: 16.0 fluid ounces S-Clodiprid 4 AG per acre or 0.5 lb ai/A.
- Maximum S-Clodiprid 4 AG allowed on other fruiting vegetable crops: 12.0 fluid ounces S-Clodiprid 4 AG per acre or 0.38 lb ai/A.

Applications: Apply specified dosage in one of the following methods:

- Chemigation into root-zone through low-pressure drip, trickle, micro-sprinkler, or equivalent equipment.
- In-furrow spray directed on or below seed.
- Narrow (2” or less) surface band spray over seed-line during planting incorporated to a depth of 1 to 1 ½ inches with sufficient irrigation within 24 hours of application.
- Narrow band spray directly below eventual seed row in bedding operation 14 or fewer days before planting.
- Post-seeding drench, transplant-water drench, or hill drench.
- Subsurface side-dress on both sides of each row. S-Clodiprid 4 AG must be incorporated into root-zone.
Planthouse Application Instructions (Not for use in California)

<tr>
<th>Pests Controlled</th>
<th>Rate: Fluid ounces per 1000 plants</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aphids, Whiteflies</td>
<td>0.05</td>
</tr>
</tbody>
</table>

Restrictions:
- Maximum amount S-Clopid 4 AG applied in the planthouse: 0.05 fluid ounces S-Clopid 4 AG or 0.00156 lb ai/ 1000 plants
- Maximum number S-Clopid 4 AG applications in planthouse: 1
- Not for use on crops grown for seed.

Applications: Apply specified dosage to seedlings in trays in the planthouse, targeting soil media (tray drench), not more than 7 days prior to transplanting, in one of the following manners:
- Uniform, broadcast high-volume foliar spray, followed immediately by sufficient overhead irrigation to wash S-Clopid 4 AG from foliage into potting media without loss of gravitational liquid from the bottom of the tray. Failure to wash S-Clopid 4 AG from foliage may result in reduced pest control.
- Injection into overhead irrigation system, using adequate volume to thoroughly saturate soil media without loss of gravitational solution from the bottom of the tray.
- The application made in the planthouse will only provide short-term protection and is not intended as a substitution for a field application. An additional field application must be made within 2 weeks following transplanting to provide continuous protection. Handle transplant carefully during setting to avoid dislodging treated potting media from roots.

Important Note: Not all varieties of fruited vegetables have been tested for tolerance to S-Clopid 4 AG applied to seedling flats. To check for tolerance, treat a small number of plants and confirm tolerance for 7 days prior to treating entire planthouse.

GREENHOUSE VEGETABLES
(Mature plants in production greenhouses): Cucumber, Tomato, only

Pests Controlled Rate: Fluid ounces per 1000 plants

<table>
<thead>
<tr>
<th>Pests Controlled</th>
<th>Rate: Fluid ounces per 1000 plants</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aphids, Whiteflies</td>
<td>0.7</td>
</tr>
</tbody>
</table>

Restrictions:
- Pre-Harvest Interval (PHI): 0 day
- Maximum number S-Clopid 4 AG applications per crop season: 1
- Maximum allowable rate per year: 0.7 fl oz. (0.03 lb ai)
- Not for crops grown for seed.

Applications: Apply specified dosage in a minimum of 16 gallons of water for tomatoes and 21 gallons of water for cucumbers using soil drenches, micro-irrigation, drip irrigation, or hand-held or motorized calibrated irrigation equipment. Application should be made only to plants grown in field-type soils, potting media, or mixtures thereof. Do not apply to plants grown in non-soil medias such as perlite, vermiculite, rock wool or other soil-less medias, or plants growing hydroponically. Do not apply to immature plants since phytotoxicity may occur.

Apply when infestation pressure surpasses threshold and beneficials are not able to maintain insect populations below damage thresholds. Repellency of bumble bee pollinators and negative effects on some beneficials ( Orius spp.) can occur when S-Clopid 4 AG is applied. Many varieties of vegetables have been tested for tolerance to S-Clopid 4 AG and show good safety. However, certain varieties may show more sensitivity to S-Clopid 4 AG. Therefore, treatment of a few plants is recommended before treating the whole greenhouse.

</tbody>
</table>

Restrictions:
- Pre-Harvest Interval (PHI): 21 days
- Maximum soil-applied product allowed per crop season: 12 fluid ounces S-Clopid 4 AG or 0.38 lb ai/A of any imidacloprid product.
- Not for use on crops grown for seed.

Applications: Apply specified dosage in one of the following methods:
- Chemigation into root zone through low-pressure drip, trickle, micro-sprinkler, or equivalent equipment.
- In-furrow spray at planting directed at or below seed.
- In a narrow (2 inches or less) surface band over seed-line at planting incorporated to a depth of 1 to 1 ½ inches followed with sufficient irrigation with 24 hours after application.
- In a narrow band directly below the eventual seed row in a bedding operation 7 or fewer days before planting.
- As a post-emergence drench, transplant drench, or hill drench.

LEGUME VEGETABLES except soybean, dry-soil treatment
Crops of Group 6 including: Edible Podded and Succulent Shelled Pea and Bean and Dried Shelled Pea and Bean
Bean (Phaseolus spp., includes field bean, kidney bean, lima bean, navy bean, pinto bean, runner bean, snap bean, tepary bean, wax bean)
Bean (Lupinus spp., includes alaska bean, azuki bean, black-eyed pea, calypso, Chinese long bean, cowpea, Crowder pea, mung bean, rice bean, Southern pea, and legume, yardlong bean)
Pea (Pisum spp., includes dwarf pea, edible-pod pea, English pea, field pea, garden pea, green pea, snow pea, sugar snap pea)
Other Beans and Peas (Broad bean (fava), Chickpea (garbanzo bean), datastore, Jackbean, Lablab bean (hyacinth bean), Lentil, Pigeon pea, Soybean (immature seed), Sword bean)

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Restrictions:
- Pre-Harvest Interval (PHI): 45 days
- Maximum soil-applied product allowed per crop season: 12 fluid ounces S-Clopid 4 AG or 0.38 lb ai/A of any imidacloprid product.
- Not for use on crops grown for seed.

Applications: Apply specified dosage in one of the following methods:
- Chemigation into root zone through low-pressure drip, trickle, micro-sprinkler, or equivalent equipment.
- In-furrow spray directed at or below seed.
- In a narrow (2 inches or less) surface band over seed-line at planting incorporated to a depth of 1 to 1 ½ inches followed with sufficient irrigation within 24 hours of application.
- In a narrow band directly below the eventual seed row in a bedding operation 7 or fewer days before planting.
- As a post-emergence drench, transplant drench, or hill drench.
ROOT VEGETABLES
Crops of Subgroup 1B except Sugarbeet plus Kava including: Beet (garden), Burdock (edible), Carrot, Celereic, Chervil (turnip-rooted), Chicory, Ginger, Horseradish, Kava (not for use in California), Parsley (turnip-rooted), Parsnip, Radish, Oriental radish (daikon), Rutabaga, Safflower (oyster plant), Saffron (black), Saffron (Spanish), Skillet, and Turnip

<table>
<thead>
<tr>
<th>Pests Controlled</th>
<th>Rate: Fluid ounces per 1000 row-feet</th>
<th>Rate: Fluid ounces per acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aphids, Flea beetles, Leafhoppers, Thrips (foliage feeding thrips only), Whiteflies</td>
<td>0.35 - 0.85</td>
<td>0.0 - 12.0 (depending on row spacing)</td>
</tr>
</tbody>
</table>

Restrictions:
- Pre-harvest Interval (PHI): 21 days
- Maximum soil-applied product allowed per crop season: 12 fluid ounces S-Clopid 4 AG or 0.38 lb aI/A of any imidacloprid product.
- Maximum S-Clopid 4 AG applications per crop season: 1
- Not for use on crops grown for seed.

Application: Apply specified dosage in one of the following methods:
- Chemigation into root zone through low-pressure drip, trickle, micro-sprinkler, or equivalent equipment.
- In-furrow spray (rate specified per 1000 row-feet) or, shank-in to 1 to 2 inches below seed depth during planting.
- In a narrow (2 inches or less) band directly (1 to 2 inches) below the eventual seed row in a bedding operation 14 or fewer days before planting.

Important Note: The rate applied affects the length of control. Use higher rates where infestations occur later in crop development, or where pest pressure is continuous. S-Clopid 4 AG rates less than 0.7 fluid ounces/1000 row-feet will not provide adequate residual pest control. S-Clopid 4 AG treated crops grown on very high organic matter soils (muck) may also require additional pest management control.

TUBEROUS and CORM VEGETABLES
Crops of Subgroup 1C including: Alocasia, Arrowroot, Artichoke (Chinese and Jerusalem), Canna (edible, Queensland arrowroot), Cassava (bitter and sweet), Chayote (root), Chufa, Dasheen (taro), Ginger, Lotus (sweet potato), Tamarind (cocosyam), Turmeric, Yam bean (pandac, manioc pea), Yam (true) *(For instructions on potato see Field Crops section)*

<table>
<thead>
<tr>
<th>Pests Controlled</th>

<tbody>
<tr>
<td>Aphids, Flea beetles, Leafhoppers, Thrips (foliage feeding thrips only), Whiteflies</td>
<td>0.25 - 0.85</td>
<td>0.0 - 12.0 (depending on row spacing)</td>
</tr>
</tbody>
</table>

Restrictions:
- Pre-harvest Interval (PHI) from planting: 3 days (leaves), 125 days (corms)
- Maximum soil-applied product allowed per crop season: 12 fluid ounces S-Clopid 4 AG or 0.38 lb aI/A of any imidacloprid product.
- Maximum S-Clopid 4 AG applications per crop season: 1
- Not for use on crops grown for seed.

Application: Apply specified dosage in one of the following methods:
- In-furrow spray (rate specified per 1000 row-feet) over planting materials (hulls) or shank-in to 1 to 2 inches below hulls depth at planting.
- Side-dress not more than 0.3 fluid ounces/1000 row-feet no later than 45 days after planting. Observe the same PHI as above.

Important Note: The rate applied affects the length of control. Use higher rates where infestations occur later in crop development, or where pest pressure is continuous. S-Clopid 4 AG rates less than 0.35 fluid ounces/1000 row-feet may not provide adequate residual pest control. S-Clopid 4 AG treated crops grown on very high organic matter soils (muck) may also require additional pest management control.

Taps or greens from these crops may be utilized for food or feed.
**STRAWBERRY®**

### Annual And Perennial Crops

<table>
<thead>
<tr>
<th>Pests Controlled</th>
<th>Rate: Fluid ounces per acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aphids, Whiteflies</td>
<td>12.0-16.0</td>
</tr>
</tbody>
</table>

**Restrictions:**
- Pre-Harvest Interval (PHI): 14 days
- Maximum soil-applied product allowed per crop season: 16 fluid ounces S-Clopid 4 AG or 0.5 lb ai/A of any imidacloprid product.

**Applications:** Apply specified dosage in one of the following methods:
- Chemigation into root-zone through low-pressure drip, trickle, micro-sprinkler, or equivalent equipment after plants are established or on perennial crops in early spring prior to bud opening.
- As a plant material or plant hole treatment just prior to, or during transplanting.
- As a band spray over-the-row in a minimum of 20 gallons of water per acre, followed immediately by overhead irrigation to incorporate product into root-zone. Do not use plastic or other mulches that limit movement of S-Clopid 4 AG into root zone.

The rate applied affects the length of control. Use higher rates where infestations may occur later in crop development or where pest pressure is continuous.

### Post-harvest Use on Perennial Crops

<table>
<thead>
<tr>
<th>Pests Controlled</th>
<th>Rate: Fluid ounces per acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>White grub complex (grub of Asian garden beetle, European and Masked chafer, Japanese beetle, Oriental beetle)</td>
<td>8.0-12.0</td>
</tr>
</tbody>
</table>

**Restrictions:**
- Pre-Harvest Interval (PHI): 14 days
- Maximum soil-applied product allowed per crop season: 12 fluid ounces S-Clopid 4 AG or 0.38 lb ai/A of any imidacloprid product.

**Applications:** Apply a single application post-harvest to coincide with renovation of strawberry fields and during active egg-laying period of beetles. Apply specified dosage of S-Clopid 4 AG in one of the following methods:
- As a ground spray via boom or backpack sprayer in a minimum of 20 gallons of water per acre.
- As a row band spray using an adjusted amount of product based on the treated row band area in proportion to the amount required per full acre make the bandwidth equivalent to the width of the anticipated fruiting bed.
- As a chemigation application with 600 to 1000 gallons of water followed by 0.1 to 0.25 inches irrigation.

**Important Note:** All soil-surface applications must be followed by 0.25 inches of rainfall or overhead irrigation water per acre within 2 hours of application. Failure to adequately incorporate S-Clopid 4 AG into egg-deposition zone may result in decreased activity.

1 Use only one of the methods (under “Annual and Perennial Crops” OR “Post-Harvest Use on Perennial Crops”). Do not use both application methods in the same season.
**SUGARBEET**
For use only in CA

<table>

<td>3.0-6.0</td>
</tr>
</tbody>
</table>

**Restrictions:**
- Maximum soil-applied product allowed per crop season: 6.0 fluid ounces S-Coprid 4 AG or 0.18 lb ai/A of any imidacloprid product.
- Do not apply immediately prior to bud opening or during bloom or when bees are actively foraging.
- Not for use on crops grown for seed.

**Applications:** Apply specified dosage in the following method:
- Apply specified dosage in sufficient carrier volume to insure uniform application. Apply directly below each furrow either during the bedding operation immediately prior to planting or at the time of planting.
The low rate may be applied to aid establishment of stands in whitefly areas, or for early season control of the other pests listed.

**NOTE:** The rate applied of S-Clopid 4 AG will affect the length of control as well as the degree and effect of control. Use higher labeled rates where infestations may occur later in crop development or where there is continuous pest pressure. Except as otherwise directed on this label, do not use at application rates lower than 0.7 fluid ounces/1000 row-feet.

### TREE, BUSH AND VINE CROPS

**BANANA AND PLANTAIN**

<table>
<thead>
<tr>
<th>Pests Controlled</th>
<th>Rate: Fluid ounces per Acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aphids, Leafhoppers</td>
<td>8.0-16.0</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Pests Suppressed</th>
<th>Rate: Fluid ounces per Acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scales</td>
<td>8.0-16.0</td>
</tr>
</tbody>
</table>

**Restrictions:**
- Not for use in California.
- Pre-Harvest Interval (PHI): 0 days.
- Maximum soil-applied product allowed per crop season: 16 fluid ounces S-Clopid 4 AG or 0.5 lb ai/A of any imidacloprid product.

**Applications:** Apply specified dosage in the following method:
- Chemigation into root zone through low-pressure drip, trickle, micro-sprinkler or equivalent equipment.
### Bushberry
Crops of Subgroup 13B Including: Blueberry, Currant, Elderberry, Gooseberry, Huckleberry, Juneberry, Ligonberry, Salal

<table>
<thead>
<tr>
<th>Pests Controlled</th>
<th>Rate: Fluid ounces per acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Japanese beetle: (adults, feeding on foliage)</td>
<td>8.0-16.0</td>
</tr>
<tr>
<td>White grub complex: (grubs of Asian garden beetle, European and Masked chafer, Japanese beetle and Oriental beetle)</td>
<td>8.0-16.0</td>
</tr>
</tbody>
</table>

**Restrictions:**
- Pre-Harvest Interval (PHI): 7 days
- Maximum soil-applied product allowed per crop season: 16 fluid ounces S-Cloprid 4 AG or 0.5 lb ai/A of any imidacloprid product.
- Do not apply pre-bloom or during bloom or when bees are actively foraging.

**Applications:** Apply specified dosage in one of the following methods:
- Chemigation into root-zone through low-pressure drip, trickle, micro-sprinkler, or equivalent equipment.
- 18-inch band on each side of the row followed by irrigation immediately after application.

For optimal grub control, apply S-Cloprid 4 AG to control 1st or 2nd instar larvae. Application may be made post-bloom up to 7 days prior to harvest, or post-harvest until October 1st. For optimum control of Japanese beetle larvae, make applications from June 1 to July 15.

Application to grass covered rows, row middles, drive lanes, headlands, and other grassy areas in and around the berry field will control resident grub populations. Applications directed to the root-zone will help protect berry plant roots from grub feeding.

Apply S-Cloprid 4 AG to moist soil. If necessary, apply one hour of irrigation water immediately before application of S-Cloprid 4 AG. To ensure maximum efficacy of soil surface spray, ½ to 1 inch of irrigation water or rainfall should be applied or received within 24 hours of application of S-Cloprid 4 AG to facilitate movement into the soil and into the root-zone.

### Caneberry
Crops of Subgroup 13A including:
- Blackberry (Rubus idaeus, Rubus occidentalis, Rubus strigosus, Rubus idaeus, Rubus occidentalis, Rubus strigosus)
- Raspberry (black and red, Rubus idaeus, Rubus occidentalis, Rubus strigosus)

<table>

</tr>
</thead>
<tbody>
<tr>
<td>Aphids, Asian citrus psyllid, Blackfly, Citrus leafminer, Leafhoppers/Sharpshooters, Mealybugs, Scales, Whiteflies</td>
<td>0.37</td>
</tr>
<tr>
<td>Citrus root weevil (larval complex)</td>
<td>0.62-1.25</td>
</tr>
</tbody>
</table>

Pests Suppressed
Citrus thrips (foliage feeding thrips only) 1.25

Restrictions:
- Pre-Harvest Interval (PHI): 0 days
- Maximum S-Clopid 4 AG rate per application: 0.17 fl. oz. per cubic foot of container medium
- Maximum rate per crop season: 0.1 fl. oz. per plant
- Do not apply pre-bloom or during bloom or when bees are actively foraging.

Application: Determine volume of container and calculate dosage necessary to treat container. Apply calculated dosage of S-Clopid 4 AG per container as a soil drench or through low-pressure drip or trickle irrigation water. Use sufficient carrier volume to ensure thorough uniform distribution throughout the media without loss of gravitational water from the container. For optimal results make planting prior to insect infestation. Retreat if necessary. For control of larvae of the citrus root weevil complex, application should be made prior to neonate larva entering potting media. Utilize higher dosage for heavy infestations.

CITRUS (Field)
Crops of Group 10 Including: Calamondin, Citrus citron, Citrus hybrids (includes chironja, tangelo, and tanger), Grapefruit, Kumquat, Lemon, Lime, Mandarin (tangerine), Pummelo, Orange (sweet and sour), Satsuma mandarin, Tangelo, White Sapote (Casimiroa spp), and other cultivars and/or hybrids of these.

<table>

</tr>
</tbody>
</table>

Pests/Diseases Suppressed
Citrus nematode, Symptoms of: Citrus tristeza virus (CTV) through vector control, Citrus yellows, Thrips (foliage feeding thrips only) 16.0

Restrictions:
- Pre-Harvest Interval (PHI): 0 day
- Maximum soil-applied product allowed per crop season: 16 fluid ounces S-Clopid 4 AG or 0.5 lb ai/A of any imidacloprid product.
- Do not apply to trees over 8 feet tall.

(continued)
CITRUS (Field) (continued)

Applications: Apply specified dosage in one of the following methods:
- Chemigation into root-zone through low-pressure drip, trickle, micro-sprinkler, or equivalent equipment. For optimum results, apply to newly planted trees or those previously trained to drip, trickle or micro-sprinkler irrigation. Lightly pre-wet the soil to break soil surface tension prior to applications of S-Coprid 4 AG. Chemigation application can be made separate to normal irrigation but followed by 10 to 20 minutes of additional watering to move S-Coprid 4 AG into root-zone. Allow 24 hours before initiating subsequent irrigations.
- Soil surface band spray on both sides of the tree. Overlap bands at the tree base to create a continuous band within the drip-line area of the tree and follow immediately with light sprinkler irrigation sufficient to move the product into the upper portion of the root-zone. This method is suitable for very coarse soils with 0.75% organic matter or less.
- Drench to base of tree not exceeding one-quart total solution per tree immediately around trunk of tree and extending outward covering the entire fibrous root system of the tree.
- For control of existing termite infestations, apply specified dosage in 1 to 4 quarts of total solution volume, depending on size of tree, as a drench application to the basal portion of the tree trunk and surrounding soil in the immediate area of the tree trunk.
- For suppression of citrus nematode, apply specified dosage through low-pressure chemigation or soil surface band spray only, ensuring complete coverage of the root system and utilizing application directions stated above for the respective application method. Repeated and regular use of S-Coprid 4 AG per several consecutive growing seasons provides the greatest degree of nematode suppression and yields the greatest plant response.

COFFEE

<table>
<thead>

</thead>
<tbody>
<tr>
<td>Rootgrubs (Scarabaeidae)</td>
<td>8.0-16.0</td>
</tr>
<tr>
<td>Rootworms (Chrysomelidae)</td>
<td></td>
</tr>
</tbody>
</table>

Restrictions:
- Pre-Harvest Interval (PHI): 30 days
- Maximum soil-applied product allowed per crop season: 16 fluid ounces S-Clopid 4 AG or 0.5 lb ai/A of any imidacloprid product.
- Do not apply pre-bloom or during bloom or when bees are actively foraging.

Applications: Apply S-Clopid 4 AG to moist soil using one of the following methods:
- As a soil spray (ground application) directed to the root and crown area using a minimum of 20 gal. of water per acre.
- As a chemigation application with 600 to 1000 gal. of water.

After application, immediately incorporate the S-Clopid 4 AG into the root-zone by 0.1 – 0.3 inches of water per acre, either with chemigation application, or through irrigation or rainfall. Inadequate incorporation within 24 hours of application may result in reduced control.

Rootgrubs and Rootworms
Make application post-bloom immediately after bees are removed. Applications should target early instar larvae.

S-Clopid 4 AG has not been tested for crop response in tank mixtures with other registered fungicides or insecticides. If tank mixing is desired, premix a sample of the S-Clopid 4 AG and the fungicide or insecticide partner at labeled rates and apply to a small area. Evaluate the crop response within 48 hours and for at least two weeks prior to using the tank mix on a larger scale. If crop injury results for the premix test, do not apply the tank mix to larger acreage.

GRAPE

Including: American bunch grape, Muscadine grape and Vitis vinifera grape

<table>
<thead>
<tr>
<th>Pests/Disease Suppressed</th>
<th>Rate: Fluid ounces per acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Grape/mold skeletonizer, Nematodes, Pierce’s disease</td>
<td>12.0-16.0</td>
</tr>
</tbody>
</table>

Restrictions:
- Pre-Harvest Interval (PHI): 30 days
- Maximum soil-applied product allowed per crop season: 16 fluid ounces S-Clopid 4 AG or 0.5 lb ai/A of any imidacloprid product.

Applications: Apply specified dosage in one of the following methods:
- Chemigation into root-zone through low-pressure drip, trickle, micro-sprinkler, or equivalent equipment.
- Subsurface side-dress shankled into the root-zone on both sides of the plants followed by irrigation.
- For suppression of nematodes, apply 7 fluid ounces in a single application or two 3.5 fluid ounce applications on a 30 to 45 day interval. Apply only by 1) chemigation into the root-zone through above ground low-pressure drip, trickle, micro-sprinkler or equivalent equipment; or 2) French plow technique, followed immediately by sufficient irrigation to move the product into the entire root-zone of the plant. Repeated and regular use of S-Clopid 4 AG over several consecutive growing seasons provides the greatest degree of nematode suppression and plant response.

(continued)
GRAPE (continued)

Make application(s) between bud-break and the pea-berry stage. A total of 7 fluid ounces/A is recommended under any of the following conditions:

1. Where vigorous vine growth is expected;
2. In warmer growing areas;
3. Where mesa/bug and European fruit lecanium populations are expected to be heavy;
4. Where vine populations exceed 600 per acre, or;
5. For suppression of nematodes.

Repetitive and regular use of S-Clopid 4 AG over several, consecutive growing seasons controls existing Phylloxera infestations over time or prevents Phylloxera from becoming established.

HOPS

<table>
<thead>
<tr>
<th>Pest Controlled</th>
<th>Rate: Fluid ounces per acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aphids</td>
<td>9.6</td>
</tr>
</tbody>
</table>

Restrictions:

- Not for use in California
- Pre-Harvest Interval (PHI): 60 days
- Maximum soil-applied product allowed per crop season: 9.6 fluid ounces S-Clopid 4 AG or 0.3 lb ai/A of any imidacloprid product.

Applications: Apply specified dosage in one of the following methods:

- Chemigation into root-zone through low-pressure drip, trickle, micro-sprinkler, or equivalent equipment.
- Subsurface side-dress shankled into the root-zone on both sides of the plants followed by irrigation.
- Hill drench in sufficient water to insure incorporation into the root-zone followed by irrigation.

Use the higher rate where extended residual control is desired or for treating larger vines or vines with dense foliage volume.

POME FRUIT

Crops of Group 11 Including: Apple, Crabapple, Loquat, Mayhaw, Pear (including Oriental pear), Quince

<table>

</thead>
<tbody>
<tr>
<td>Pests Controlled</td>
</tr>
<tr>
<td>Aphids, Leafhoppers/Sharpshooters, Mealybugs, Spittlebugs, Termites, Whiteflies</td>
</tr>
</tbody>
</table>

**Pests/Diseases Suppressed**
- Pecan scab (from reduction in honeydew deposition) | 8.0-16.0 |
- Thrips (foliage-feeding thrips only) | 16.0 |

(continued)
Restrictions:
- Pre-Harvest Interval (PHI): 7 days
- Maximum soil-applied product allowed per crop season: 16 fluid ounces S-Clopid 4 AG or 0.5 lb ai/A of any imidacloprid product.
- Do not apply pre-bloom or during bloom or when bees are actively foraging.

Applications: Apply specified dosage prior to or at onset of pest infestation in one of the following methods:
- Chemigation into root-zone through low-pressure drip, trickle, micro-sprinkler, or equivalent irrigation equipment. Pre-wet soil prior to applications of S-Clopid 4 AG and allow soil to dry following application and prior to subsequent irrigation;
- Emitter or spot application in a minimum of 4 fluid ounces of mixture per emitter site;
- Shank or subsurface side-dress injected to a depth just above or just within the root zone and between the trunk and drip line of the tree canopy. Apply in a minimum of 10 gallons per acre using multiple shanks on both sides of trees. Make sure that product placement is below soil or orchard floor debris. Irrigate the entire treated area unless sufficient rain falls within 48 hours to promote uptake by root system.
- For control of termites, apply specified dosage to slightly moist soil as a high-volume drench to the basal portion of the tree trunk and surrounding soil in the immediate vicinity of the tree trunk. Use sufficient carrier volume to penetrate the soil to a depth of 18 – 24 inches to obtain optimum control. Allow soil to dry following treatment and before applying any irrigation.

Remarks:
Use the higher rates when 1) applied by shank or subsurface sidedress; 2) used on larger trees; 3) to soils with high clay content; 4) to high plant populations; and/or 5) where extended control is desired. Under some conditions, control may not occur for 14 or more days or until two (2) irrigations have been made. Applications made later in the season may result in reduced efficacy.

TROPICAL FRUIT
Including: Acerola, Atemoya, Avocado, Birla, Black sapote, Canistel, Cherimoya, Custard apple, Feijoa, Jaboticaba, Guava, Llama, Longan, Lychee, Manzy sapote, Mango, Papaya, Passionfruit, Persimmon, Pulasan, Rambutan, Sapodilla, Sourap, Spanish lime, Star apple, Starfruit, Sugar apple, Wax jambu

(1) Not for use in California
## SEED PIECE TREATMENT

### POTATO

<table>
<thead>
<tr>

<td>0.4</td>
<td>8.0</td>
</tr>
<tr>
<td>(PLRV), potato yellows, net necrosis</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Restrictions:
- Maximum S-Clopid 4 AG allowed per crop season: 10.0 fluid ounces/Acre (0.31 lb. ai/A).
- Do not use treated seed-pieces for food, feed, or fodder.
- Do not apply any subsequent application of S-Clopid 4 AG (in-furrow), Gaucha, Leverage, or Provado following a S-Clopid 4 AG seed-piece treatment.

Application: Apply specified dosage as a diluted spray onto seed-pieces using a shielded spray system. Dilute with 3 parts water, or less, to 1 part S-Clopid 4 AG. Agitate or stir spray solution as needed. Fungicidal or inert absorbent dusts may be applied after S-Clopid 4 AG application. Apply only in areas with adequate ventilation or in areas that are equipped to remove spray mist or dust. Plant seed pieces as soon as possible after treating avoiding prolonged exposure of S-Clopid 4 AG treated seed-pieces to sunlight and in accordance with the recommendation of your local Extension service.

* Based on a seeding rate of 2000 lbs. per acre.

### CHRISTMAS TREE

<table>
<thead>
<tr>
<th>Pests Controlled</th>
<th>Rate: Fluid ounces per acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>White grub complex (damage from grubs of Asiatic garden beetle, European and Masked chafer, Japanese beetle and Oriental beetle)</td>
<td>0.0-16.0</td>
</tr>
</tbody>
</table>

### Restrictions:
- Not for use in California.
- Maximum S-Clopid 4 AG allowed per season: 16.0 fluid ounces/Acre (0.5 lb ai/A).

Application: Soil incorporation and movement of S-Clopid 4 AG to the root-zone is required for activity. S-Clopid 4 AG can be incorporated easiest when applied to moist soil. Apply specified dosage in one of the following methods:
- Chemigation through low-pressure drip, trickle, micro-sprinkler, or equivalent equipment.
- 18-inch band on each side of the row (small trees) to full broadcast application (large trees) followed by rainfall or 0.25 – 1 inch of irrigation within 12 hours of application.

For optimal grub control, apply S-Clopid 4 AG during adult flight activity, or up to mid-July when 1st instar larvae are present.
POPLAR/COTTONWOOD
(includes members of the genus Populus grown for pulp or timber)

Field Application Instructions. See below for Cutting/Whips Application Instructions.

<table>
<thead>
<tr>
<th>Pests Controlled</th>
<th>Rate: Fluid ounces per acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aphids, Cottonwood leaf beetle</td>
<td>8.0-16.0</td>
</tr>
</tbody>
</table>

Pest Suppressed
Phylloxerina populnea 8.0-16.0

Restrictions:
- Not for use in California
- Maximum 5-Clopid 4 AG allowed at plant per crop season: 16.0 fluid ounces/Acre (0.5 lb ai/A)
- Do not apply pre-bloom or during bloom or when bees are actively foraging.

Applications: Apply specified dosage in the following method:
- Chemigation through low-pressure drip irrigation.

For narrow-row, cutting orchards/nurseries used for plant propagation, shank into root zone followed by adequate irrigation to promote uptake. (Adequate irrigation depends on soil moisture level at application. Under dry conditions, 0.25 inches/Acre is recommended).

For Cottonwood leaf beetle, protection against damage will occur when application is made early-season, when the beetles first begin feeding. Larger trees may require earlier treatment as a result of slower uptake.

For Phylloxerina, apply early in the year from break of dormancy through May.

Cutting/Whip Application Instructions. See above for Field Application Instructions

<table>
<thead>
<tr>
<th>Pests Controlled</th>
<th>Cutting/Whip Soaking Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cottonwood leaf beetle</td>
<td>Fluid ounces S-Clopid 4 AG per 100 gallons</td>
</tr>
<tr>
<td></td>
<td>6.65 – 13.3 (unhydrated cuttings/whips)</td>
</tr>
<tr>
<td></td>
<td>13.3 – 20 (partially hydrated cuttings/whips)</td>
</tr>
</tbody>
</table>

Pest Suppressed
Phylloxerina populnea 6.65 – 13.3 (unhydrated cuttings/whips) |
|                   | 13.3 – 20 (partially hydrated cuttings/whips) |

Restrictions:
- Maximum 5-Clopid 4 AG allowed at plant per crop season: 16.0 fluid ounces/Acre (0.5 lb ai/A)

Applications: Product absorption into the plant material is affected by 1) the moisture content of the cuttings/whips prior to application, 2) the solution concentration; and 3) the length of soaking intervals. For a constant soaking interval of 24 hours, drier cuttings/whips absorb a higher amount of solution and require a lower concentration. On the other hand, more hydrated cuttings/whips absorb less solution and require a higher concentration. Soaking of cuttings/whips should be done in a covered container without UV light.

Apply specified dosage in one of the following cuttings/whips soaking methods:
- For freshly cut (unhydrated) cuttings/whips, soak plant material in specific solution concentration for 24 hours prior to cold storage. After removal from cold storage, plant as needed.
- For previously hydrated cuttings/whips removed from cold storage, allow plant material to reach room temperature and soak in specified solution concentration for 24 hours prior to planting.
- Proper care should be taken in disposal of any residual soaking solution. Solution may be applied to existing trees or other registered crops as long as all product label precautions and restrictions are observed.

Note: Not all Populus spp. clones/varieties/hybrids have been tested for crop safety. Treat a small number of cuttings/whips and evaluate before commercial use.
POULTRY HOUSING STRUCTURES

Darkling and Hide Beetles:
S-CLOP® 4 AG may be used indoors as a spot, crack and crevice, or overall surface spray to control darkling beetles and hide beetles on floors, walls, and support beams of poultry or turkey housing structures, and within 25 feet of the perimeter of the poultry house.

INSECTICIDE CLASS ROTATIONS:
In order to avoid problems with developed resistance to insecticides it is important to rotate to an insecticide of a different class each 2-3 flocks. It is best to attempt to use 3 different classes of insecticides during a calendar year.

When to Apply: Apply between flocks after de-caking and sanitation procedures have been completed.

Restrictions:
- Do not apply more than 7 days prior to bird placement.
- Do not apply when birds are present.
- Do not allow food or feed to be contacted by the spray.
- Remove feed and water from the treatment area before applying.
- Do not restock birds until spray has completely dried.

Mixing and Application Rates: Calculate the surface area to be sprayed. Apply 3 fl. oz. of S-Clopid 4 AG per 1000 square feet of surface in 1/2 to 2 gallons of final dilution per 1000 square feet. To prepare the dilution, partly fill the spray tank with 1/2 the water to be used, then add the appropriate amount of S-CLOP® 4 AG, mix, then add the rest of the water while agitating or mixing. Maintain agitation while spraying. Prepare a fresh mixture for each application.

How To Apply:
Apply S-CLOP® 4 AG to the entire footing including 1 foot up onto the wall above the footing, and to 3 to 4 foot wide bands directly beneath all feed lines. These areas are where the vast majority of the adult and larval beetles reside when the birds are in the house, and therefore will have an increased likelihood of coming in contact with the insecticide. Measure these areas to determine the correct amount of S-CLOP® 4 AG needed for the application.

If Beetle infestations are very high it may be necessary to treat the footings including 1 foot up onto the walls and the entire floor area of the house.

Also apply as a crack and crevice spray around wall insulation or other areas where beetle may be located.

In structures having support beams it is necessary to treat the floor 1 foot around each post and 2 feet up onto the post. In cases of extreme infestation, treat the entire facility. Apply 3 fl. oz per 1000 square feet in 2 gallons of water per 1000 square feet as described above. Apply as a broadcast spray to litter over the entire floor to litter under feed and water lines, and to lower sections of walls to one foot above the foundation.

Ants in and around animal housing facilities (except carpenter ants, fire ants, harvester ants, and pharaoh ants):
Use only crack and crevice or wall void applications in building interiors.

Apply at a rate of 3/4 teaspoon to 1 1/2 teaspoons S-Clopid® 4 AG per gallon of water (2 1/2 teaspoons to 2 1/2 fl. ounces per 10 gallons). Spray into cracks, crevices, drilled holes, onto walls, and around potential entry points such as doors, windows, vents, eaves, soffits, and utility access holes. If nests are present in voids, spray into the void if possible, or apply as a foam. (See specific instructions of foam generator). Spray surfaces to provide complete coverage but do not spray to dripping or runoff.

Also apply as a drench to soil, turf, ornamental shrubs or plants, or ground cover around the exterior of the building, and along driveways or other hard surfaces where ants may be tunneling. For above-ground nests, such as in wood posts, decks, or fences, or in trees, spray into the cavity and on the wood surface.

Restrictions:
- Do not use to control native or imported fire ants, carpenter ants, harvester ants or pharaoh ants.
- Keep people and domestic animals out of the treated area until sprays have dried.
SEED TREATMENT

S-Clomprid 4 AG may be used as a seed treatment insecticide that protects the labeled seeds and seedlings from injury from certain early-season insects. S-Clomprid 4 AG will also provide protection to seed in storage against damage from certain insects. Federal regulations have established official tolerances for pesticide residues. In order that residues on food and forage crops will not exceed established tolerances, use this product only at the rates contained on this label. S-Clomprid 4 AG is formulated for both commercial and for specific crop/agricultural establishment (on-farm) application. See below for Seed Treatment directions by crop, for application details. S-Clomprid 4 AG may be applied with mechanical, slurry, or mist-type seed treating equipment, provided that the equipment is calibrated to accurately and uniformly apply the product to seed. Uniform application to seed is necessary to ensure best insect protection and optimum performance. Only sound and well-cured seed are to be treated. Refer to the application instructions below for label rates and application details. S-Clomprid 4 AG will treat similarly to other concentrated imidacloprid seed treatment formulations. The specific treating process and equipment that is most suitable depend on factors such as the seed type, rate, treater type and temperature. Contact your local Direct Ag Source representative or supplier for specific recommendations if assistance is required.

Seed Dye or Colorant: The purchaser of this product is responsible for ensuring that all seed treated with this product are adequately dyed with a suitable color to prevent its accidental use as food for man or feed for animals. Refer to 21 CFR Part 2.25. Any dye or colorant added to treated seed must be cleared for use under 40 CFR Part 153.155.

ALWAYS MIX PRODUCT THOROUGHLY BEFORE USING.

Always pretest tank mixes to assure physical compatibility between formulations. Observe the most restrictive of the labeling limitations and precautions of all products used in mixtures. Do not tank mix with any product that contains a label prohibition against tank mixing.

STORED SEED PROTECTION

Applied at labeled rates equal to or above 1.0 fluid ounces per hundredweight (fl. oz. / cwt.), S-Clomprid 4 AG will provide protection to seed against injury from the following insects: Indian Meal Moth (Plodia interpunctella), Rice Weevil (Sitophilus oryzae), Red Flour Beetle (Tribolium castaneum) and Lesser Grain Borer (Rhizoperthodesmiae) for all labeled crops. Fumigate seed that has an existing population of stored grain pests before treating with this product and bagging seed.

SEED TREATMENT FOR EARLY SEASON PROTECTION AGAINST CERTAIN SUCKING INSECTS

S-Clomprid 4 AG will aid in the early season protection of seeds and seedlings against injury by certain insects. S-Clomprid 4 AG kills listed pests which may vector certain viruses.

Canola

For End-Use Application At Agricultural Establishments: Always mix this product thoroughly before using. Apply using equipment such as a HGSF or Eight-Bag Batch Treater. Apply 6.4 to 16 fl. oz. of S-Clomprid 4 AG per 50 pound bag of seed. This product may be diluted with an approved fungicide mixture for extended disease protection. When using a batch treater: treat one-half of the seed with one-half of the slurry mix; then add the remainder of the seed and slurry, and continue mixing until all seed is thoroughly covered.
For Commercial Seed Treatment: Apply with mechanical, slurry, or mist-type seed treating equipment, provided that the equipment is calibrated to accurately and uniformly apply the product to seed.

Crop | Pest | Rate | Comments
--- | --- | --- | ---
Canola | Aphids, Flea beetles, Wireworms | 12.8 - 32.0 fl. oz. per one hundred pounds (cwt.) of seed | Early season protection of seedlings. In areas where flea beetles and foliar insects are in high numbers, use the higher specified application rate. Please consult your local agricultural extension service office for pest patterns, history and forecasts to assist in determining the appropriate rate for your region.

Crop | Pest | Rate | Comments
--- | --- | --- | ---
 | Second generation Lygus bugs (including Lygus spp.), Cabbage seed pod weevil larvae (including Lygus spp.) | 19.2 - 32.0 fl. oz./cwt. | For suppression only. Use the higher rate when insects are in high numbers. Please consult your local agricultural extension service office for pest patterns, history and forecasts to assist in determining the appropriate rate for your region.

For End-Use Application At Agricultural Establishments: Always mix product thoroughly before using. Apply 4 fl. oz. of 5-CLOPRD 4 AG per 50 pounds of seed using equipment such as a HOCT or Eight-Bag Batch Treater. This product must be diluted for a slurry application rate of 8 to 10 fluid ounces of slurry per 50 pounds of seed. When using a batch treater, treat one-half of the seed with one-half of the slurry mix. Then add remainder of the seed and slurry, and continue mixing until all seed is thoroughly covered. To improve seed flow, add dry talc at the rate of 0.75 ounce per 50 pounds of seed after slurry treatment, and allow it to distribute evenly on the seed.

For Commercial Seed Treatment: Apply 8.0 fl. oz. of product per hundredweight (cwt.) seed using any mechanical, slurry, or mist-type seed treating equipment, provided that the equipment is calibrated to accurately and uniformly apply the product to seed.

Crop | Pest | Rate | Comments
--- | --- | --- | ---
Sorghum | Aphids (including Corn leaf, English grain, Greenbug, and Yellow sugar cane aphid), Cicada bugs, Fire ant, Wireworms | 8.0 fl. oz./cwt. | Provides early season protection of seedlings against injury. Thorough coverage is necessary for optimal control. 
\* Note: Not to kill or control fire ants. Only for protection of seed.
Restrictions: DO NOT graze or feed livestock on treated areas for 45 days after planting.

Wheat, Barley, Oats, Rye, Triticale

For End-Use Application At Agricultural Establishments: Always mix product thoroughly before using. Apply using equipment such as a Total Slurry Treater (TST), Farmer Applied Seed Treater (FAST) or other on-farm seed treating equipment capable of accurately applying low rates of 5-CLOPRD 4 AG. Apply 1.0 - 3.0 fl. oz. per hundredweight (cwt.) of seed as a slurry treatment prior to planting. 5-CLOPRD 4 AG must be combined with a fungicide product for seed and seedling protection against fungal pathogens, as well as the listed insects. Depending on the fungicide product used, dilution with water may be necessary for optimum coverage. 5-CLOPRD 4 AG may also be applied on-farm to seed previously treated with a fungicide. In this case, dilution is necessary.
For Commercial Seed Treatment: S-CLOPRID 4 AG may be applied with mechanical, slurry, or mist-type seed treating equipment, provided that the equipment is calibrated to accurately and uniformly apply the product to seed. For maximum effectiveness, seed must be treated uniformly and covered thoroughly.

Restriction: DO NOT feed or graze livestock on treated areas for 45 days after planting.

Cotton (Delinted Seed Only)

For End-Use Application At Agricultural Establishments: Always mix product thoroughly before using. Apply using equipment such as a HGBT or Eight-Bug Batch Treater at rates listed in the table below. This product may be diluted/steamed with water or an approved fungicide for disease control. Mix slurry so that rate is 8 to 10 fluid ounces of diluted slurry per 50 pounds of seed. When using a batch treater, treat one-half of the seed with one-half of the slurry; then add the remainder of seed and slurry, and continue mixing until all seed is thoroughly covered.

For Commercial Seed Treatment: Apply at 0.375 mg. a.i. per seed or 16.0 fluid ounces per hundredweight of seed (16 fl. oz./cwt.), whichever is less. Apply using any mechanical, slurry, or mist-type seed treating equipment, provided that the equipment is calibrated to accurately and uniformly apply the product to seed.

Sugar Beets
For Commercial Seed Treatment Only: Apply at rates specified below with any mechanical, slurry, or mist-type seed treating equipment, provided that the equipment is calibrated to accurately and uniformly apply the product to seed.

IMPORTANT: if rate exceeds 3.0 fl. oz. per unit, seed must be pelleted with at least 2 parts of pelleting mixture per part of raw seed.

<table>

<td>Provides early season protection of seedlings.</td>
</tr>
</tbody>
</table>

3) 3.0 to 6.3 fl. oz. seed unit may be applied if applied in or on a unit of pelleted sugar beet seed with a weight ratio of at least 2:1 pelleting mixture to raw seed.

If applying to non-pelleted raw seed, apply in a film coat and do not exceed a rate of 3.0 ft. oz. per unit of seed.

4) Seed unit = 100,000 seeds, approximately 1 kilogram (2.2 lbs.)

Including reducing risk of spread of Curly top and Yellow mosaic virus by insect vectors.

Other Crops
For Commercial Seed Treatment Only: Soybeans, carrots and the peas, beans and pod vegetables specified below are to be treated only by commercial treaters. S-CLOP 4 AG may be applied with mechanical, slurry, or mist-type seed treating equipment, provided that the equipment is calibrated to accurately and uniformly apply the product to seed.

ROTATIONAL CROPS

Treated areas may be replanted with any crop specified on an imidacloprid label, or any crop for which a tolerance exists for the active ingredient, as soon as practical following the last application. For all other crops not listed on an imidacloprid label, or for crops for which no tolerances for the active ingredient has been established, a 12-month plant-back interval must be observed. The following plant-back intervals must be observed for listed crops:

*Cover crops for soil building or erosion control may be planted any time, but do not graze or harvest for food or feed.

IMPORTANT - USE RESTRICTIONS

- Treated seed must not be used for or mixed with food or animal feed or processed for oil.
- Wheat, Barley, Oats, Rye, Tricale and Sorghum: Do not graze or feed livestock on treated areas for 45 days after planting.
- Cotton (deltined seed only): Regardless of the type of application (seed treatment, soil, or foliar), do not apply more than a total of 0.5 lb. imidacloprid per acre per cropping cycle.
- Seed-and-pod vegetable seed treated in California must be destined for planting in states other than California and is not to be planted in California.

TREATED SEED BAG LABELING

Seed commercially treated with S-Clopid 4 AG Seed Treatment must be labeled in compliance with all the requirements of the Federal Seed Act. Seed that has been treated with this product that is then packaged or bagged for future use must also contain the following labeling on the outside of the seed package or bag:

*This bag contains seed treated with imidacloprid. Treated seed must not be used for or mixed with food or animal feed or processed for oil. Store seed away from food and feedstuff.
- Persons opening this bag or loading/pouring the treated seed must wear a long-sleeved shirt, long pants, socks and shoes, and chemical resistant gloves.
• Dispose of seed packaging in accordance with local requirements.
• Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours. **Exception:** Once the seed is planted in soil or other planting media, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area without restriction if there will be no contact with soil/subsurface.
• PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is: coveralls, chemical resistant gloves, shoes plus socks, protective eyewear.
• This product is highly toxic to birds and aquatic invertebrates. Do not apply directly to water or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters. Exposed treated seed may be hazardous to birds. Dispose of all excess treated seed and seed packaging by burial away from bodies of water. Cover or incorporate spilled treated seeds.
• Wheat, Barley, Oats, Rye, Triticale, and Sorghum: Do not graze or feed livestock on treated areas for 45 days after planting.
• Cotton (dehulled seed only): Do not apply more than a total of 0.5 lb. imidacloprid per acre per cropping cycle, regardless of the type of application (seed treatment, soil, or foliar).
• Soybeans: Do not graze or feed livestock on soybean forage or hay grown from treated seed.
• Seed-and-pod vegetable seed treated in California must be destined for planting in states other than California and is not to be planted in California.
• ROTATIONAL PLANT-BACK INTERVALS: Treated areas may be replanted with any crop specified on an imidacloprid label, or any crop for which a tolerance exists for the active ingredient, as soon as practical following the last application. For all other crops not listed on this product label, or for crops for which no tolerance for the active ingredient has been established, a 12-month plant-back interval must be observed. The following plant-back intervals must be observed for listed crops:
  • Immediate Plant Back: Artichoke; Barley; Borage; Brassica (cole) Leafy Vegetables; Carrots; Celantro; Corn; Field; Corn, Sweet; Cotton; Cranberry; Crambe; Cucurbit; Eggplant; Flax; Ground cherry; Leaf Petiole Vegetables; Leafy Vegetables; Legume Vegetables (succulent or dried, except soybeans); Millet; Mustard Seed; Oats; Okra; Pepino; Pepper; Popcorn; Potato; Rapeseed; Root and Tubing Vegetables; Rye; Saltflower; Sorghum; Soybean; Strawberry; Sugarbeet; Sunflower; Tomatillo; Tomato; Triticale; Watercress; Wheat.
  • 30-Day Plant-Back: Buckwheat; Rice. Cover crops for soil building or erosion control may be planted any time, but **DO NOT** graze or harvest for food or feed."
STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage and disposal.

**Pesticide Storage**: Keep pesticide in original container. Do not put concentrate or dilute into food or drink containers. Store in cool, dry place. Do not store diluted spray.

**Pesticide Disposal**: Wastes resulting from the use of this product may be disposed off on site or at an approved waste disposal facility.

**Container Disposal**: Non-refillable containers. Do not reuse or refill this container. Offer for recycling, if available or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows:

- **Containers less than or equal to 5 gallons**: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinse into application equipment or a mix tank or store rinse for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

- **Refillable Container**: Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the re filler.

  To clean the container before final disposal, empty the remaining contents into application equipment or mix tank. Add water - at least 2% of the container volume, and up to 1/3 of the volume of water needed to make the proper slurry composition with a maximum of 1/4 of the container volume. Replace and tighten closure. Agitate vigorously or recirculate the rinseate with a pump for at least 2 minutes, ensuring that the rinseate rinses the walls of the container. Empty the rinseate into application equipment or rinseate collection system, for later use or disposal. Repeat this procedure two more times. If used in application equipment, adjust the slurry volume application rate to account for any added rinseate water.
WARRANTY STATEMENT

DIRECT AG SOURCE, LLC warrants that this product conforms to the chemical description on the label thereof and is reasonably fit for purposes stated on such label only when used in accordance with directions under normal use conditions. It is impossible to eliminate all risks inherently associated with use of this product. Crop injury, ineffectiveness, or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of DIRECT AG SOURCE, LLC. To the extent consistent with applicable law, all such risks shall be assumed by the Buyer. Except as expressly provided herein, DIRECT AG SOURCE, LLC makes no warranties, guarantees, or representations of any kind, either expressed or implied, or by usage of trade, statutory or otherwise, with regard to the product sold, including, but not limited to merchantability, fitness for a particular purpose, use or eligibility of the product for any particular trade usage. To the extent consistent with applicable law, the exclusive remedy of any buyer or user of this product for any and all losses, injuries, or damages resulting from or in any way arising from the use, handling, or application of this product, whether in contract, warranty, tort, negligence, strict liability, or otherwise, shall be damages not exceeding the purchase price paid for this product or, at DIRECT AG SOURCE, LLC election, the replacement of this product.
