SUPPLEMENTAL USE DIRECTIONS –
Season Maximum Rate of 1.0 Fluid Ounce Per Acre in Single or Sequential Applications

Directions for Use
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
THIS LABEL MUST BE IN THE POSSESSION OF THE USER AT THE TIME OF APPLICATION.

Before applying IMPACT herbicide please read the complete label affixed to the product container. All applicable directions, restrictions and precautions on the EPA-registered label are to be followed. Use of IMPACT according to this supplemental labeling is subject to the use precautions and limitations imposed by the label on the container.

IMPORTANT: Read the entire Directions for Use and the Limited Warranty and Disclaimer on the EPA-registered IMPACT herbicide label before using this product.

Use Information
For use in FIELD CORN (grown for grain, silage or seed), POPCORN (ear, kernel or seed) and SWEET CORN (ear, kernel or seed).

Use in sequential applications - This maximum seasonal rate allows uses in sequential applications where a second flush of weeds may emerge.

Use in single application - In addition to the weed species listed on the container label controlled by 0.75 fluid ounce per acre, this increased maximum single application use rate of 1.0 fluid ounce per acre may be used to control broadleaf signalgrass, fall panicum, seedling johnsongrass, yellow foxtail or woolly cupgrass if applied before these species exceed the three leaf stage of growth.
A single application at 1.0 fluid ounce per acre may also be used in rescue applications where weeds have grown beyond the size indicated on the container label. In rescue applications on larger weeds the control attained may vary. The benefits of this application must be based on the opportunity to reduce weed competition for improved crop yield.
For the above use programs refer to the container label for recommended spray adjuvant and tank mixtures.

Restrictions and Limitations

- No more than 1.0 fluid ounce per acre (0.022 pounds active ingredient per acre) of IMPACT may be applied during the growing season.
- In the event of a crop loss due to weather, any corn type can be replanted following an application of IMPACT herbicide. If IMPACT was tank-mixed with other herbicides, the label restrictions for these herbicides must also be followed.
- DO NOT apply IMPACT within 45 days of corn harvest (fresh market sweet corn, silage, fodder, or grain).
- DO NOT graze or feed treated corn forage, silage, fodder, or grain for at least 45 days after an application of IMPACT.

ROTATIONAL CROPS GUIDELINE: These rotational crop guidelines apply for IMPACT use at the increased rate of 1.0 fluid ounce per acre and supersede the rotational crop statements on the container label. Planting earlier than the recommended interval may result in crop injury. Avoid over applications by minimizing overlaps of spray swaths and by switching off spray boom when turning (end rows).
