ZINC PHOSPHIDE RODENT PELLETS AG

Kills Moles and Gophers
Kills Rats and Mice

Do not sell this product in individual containers holding less than 4 pounds of bait.

ACTIVE INGREDIENT:
Zinc Phosphide.................................................. 2.2% 
Other INGREDIENTS............................................... 97.8% 

TOTAL:.......................................................... 100.0% 

EPA Reg. No. 61282-56  EPA Est. No. 61282-M-01

KEEP OUT OF REACH OF CHILDREN CAUTION

NOTE TO PHYSICIAN OR VETERINARIAN: Contains the Phosphine-producing active Zinc Phosphide. Poisonous mucosal damage may centralize the use of gas phase. For animals ingesting bait and/or shoveling poisons, induce vomiting by using hydro- gas paste. Sodium bicarbonate can be given orally to neutralize the stomach acidity. The stomach and intestinal tract can be evacuated.

Toxin Symptoms: The symptoms of poisoning are nausea, vomiting, dizziness, drowsiness, and unconsciousness. These symptoms can occur within 30 minutes to 2 hours after ingestion of the bait. If symptoms are noted, seek medical attention immediately.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS:
CAUTION: Harmful if swallowed, absorbed through skin, or inhaled. Avoid contact with eyes. Avoid breathing dust. Avoid contact with skin or clothing. Wear long-sleeved shirt and long pants, shoes, socks, and waterproof gloves. Wash hands thoroughly with soap and water before eating, drinking, and chewing gum, using tobacco or the toilet. Remove contaminated clothing and wash before reuse. Any person who retrieves carcasses or unused bait following application of this product must wear waterproof gloves.

User Safety Requirements:
Follow manufacturer’s instructions for cleaning and maintaining PPE. If no such instructions are available, use detergent and hot water. Keep and wash PPE separately from other laundry. Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash hands thoroughly after applying the bait and before eating, drinking, chewing gum, using tobacco or the toilet and change into clean clothing.

ENVIRONMENTAL HAZARDS:
This product is extremely toxic to birds and other wildlife. Wildlife feeding on treated bait may be killed. Dogs, cats, and other predatory scavenging mammals may be poisoned if they feed on animals that have eaten this bait. This product does not directly harm wildlife.

DIRECTIONS FOR USE:
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. READ THIS LABEL. Read all use directions, restrictions, and precautions.

LAWNS:
This product may only be applied at the use sites and by the application methods indicated on this label.

Bait must be applied directly into mole and pocket gopher burrow systems. Any person who retrieves carcasses or unused bait following application of this product must wear waterproof gloves.

This product may only be used to control moles and pocket gophers in manual, below-ground applications.

Do not apply in areas where food or feed may become contaminated.

Do not apply this product by a baited barrier.

Baited barrier: The presence of moles may be indicated by a network of surface ridges in the turf, by a series of conical mounds of earth pushed up from deep burrows, or by damage to flower bulbs.

Surface Ridges: Prior to preparing treatment determine which burrows are active according to the following two methods: Either press down a small section of the tunnel or remove a one-inch square of the tunnel’s roof. Mark these sections and recheck in 24 hours. The burrow is considered active if the flattened runway has been raised up or if the roof has been repaired. Only treat active burrows. Carefully, with a long-handled spoon, punch a hole in the top of active tunnels, drop a teaspoon amount of this product and carefully close the hole with soil or stone. Do not collapse runway again and do not allow soil to cover the bait. After a few days check to see if the burrows are still active according to one of the two methods described above. If so, repeat treatment.

Conical Mounds: With a long handled spoon carefully remove the center plug from each conical mound. Drop a teaspoon amount of this product into the underground tunnel. Close the opening with a rock or soil. Do not allow loose soil to cover bait. If mole activity persists after one treatment, a second treatment is recommended. If mole activity persists after two treatments, use another method for controlling moles.

Flowering Bulb Protection (Fall Planting): Pack about one-quarter inch of soil against each flower bulb. Place several pellets at sides of and around the flower bulb. Then cover with fresh soil.

Specific Directions for Pocket Gophers: Burrowing pocket gophers (Thomomys spp. and Geomyodes spp.) throw out low, flat shaped mounds on either side of their underground tunnel. These lateral tunnels coming to the surface are on the flat side and are plugged with soil. With a long-handled spoon carefully remove the plug. Insert a teaspoon of this product as far down as possible. Reposition opening being careful not to cover bait with soil.

Follow-up: Remove waterproof gloves, collect and dispose of all dead, exposed animals and dispose of leftover bait in accordance with disposal instructions. Use detergent and hot water to wash spoons. Do not use spoons for mixing, handling, or transferring food or feed. If reinfection occurs, repeat treatment. Do not treat the same area with this product at less than 30-day intervals.

IN AND AROUND BUILDINGS:
IMPORTANT: Do not expose children, pets, or other non-target animals to rodenticides. To help prevent accidents:
1. Store product not in use in locations out of reach of children and pets.
2. Apply bait in locations out of reach of children, pets, domestic animals and non-target wildlife, or in tamper-resistant bait stations. These stations must be resistant to destruction by dogs and by children under six years of age. Bait stations must be secured or otherwise immobilized to prevent tampering. Stronger bait stations are needed in areas open to booted livestock, raccoons, bears, or other potentially destructive animals, or in areas prone to vandalism.
3. Dispose of product container, and unused, spoiled, and un consumed bait as specified on this label.

Note: Bait stations are mandatory for outdoor, above-ground use. Tamper-resistant bait stations must be used if children, pets, non-target mammals, or birds may access the bait.

For HORSEWAYS, RODFISH, RATS AND HOUSE MICE
For control of only house rats, rats and house mice in and around homes, industrial, commercial, agricultural, and public buildings, and similar man-made structures. This product may only be used inside and within 50 feet of buildings or inside of transport vehicles (ships, trains, or aircraft). Do not apply further than 50 feet from buildings. Do not use in edible product areas of food or feed processing plants or other areas where food or feed is commercially prepared or processed. Do not contaminate food/ feed or food-handling equipment or place near or inside ventilation duct openings. Do not broadcast bait. When used in USDA inspected facilities, this product must be applied in tamper-resistant bait stations.

Do not sell this product in individual containers holding less than four (4) pounds of bait.

SELECTION OF TREATMENT AREAS: Apply bait only in dry, clear, rodent-free areas. Remove as much alternative food or water and harborage as possible prior to bait application. Determine areas where rats or house mice will most likely find and consume the bait. Generally, these areas are along walls, behind kitchen appliances, in or outside burrows, in corners and concealed places, between floors and walls, or in locations where rodents or their signs have been seen.

APPLICATION DIRECTIONS:
Rats: Apply 1 to 2 teaspoon amounts of bait per placement. Space placements at intervals of 15 to 30 feet in infested areas. Maintain an uninterrupted supply of fresh bait for at least 10 days or until there no longer are signs or new feeding by rats. For outdoor use, place bait in active rat burrows or tamper-resistant bait stations.

House Mice: Apply 1 teaspoon amount of bait at each placement. Space placements 8 to 12 feet intervals. Larger placements (up to 2 ounces) may be needed at points of high human activity. For outdoor use, place in taill in tamper-resistant bait stations. Maintain an uninterrupted supply of fresh bait for at least 15 days or until there no longer are signs of feeding by house mice.

Follow-up: Replace contaminated or spoiled bait immediately. Use waterproof gloves collect and dispose of all dead, exposed animals and leftover bait properly. To prevent reinfection, limit sources of rodent food, water, and harborage as much as possible. If reinfection does occur, repeat treatment. Do not treat the same area with this product at less than 30-day intervals.

STORAGE AND DISPOSAL
Do not contaminate water, food or feed by storage or disposal.

PESTICIDE STORAGE: Store only in original container, in a cool, dry, place inaccessible to children and pets. Keep container closed and away from other chemicals.

PESTICIDE DISPOSAL: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsates is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER HANDLING: Non-refillable container. Do not reuse or refit this container. Dispose of empty container by placing in trash, or at an approved waste disposal facility.

DISCLAIMER:
To the extent permitted by applicable law, seller makes no representation or warranty, either express or implied, for results due to misuse, improper handling or improper storage of this material. Nor does Seller assume any responsibility for injury to persons, crops, animals, soil or property arising out of misuse, improper handling or improper storage of this material.
