ST. PAUL BRAND
Fertilizer with Surge®
Broadleaf Herbicide

Not for use, distribution or use in Nassau or Suffolk Counties in New York State.

ACTIVE INGREDIENTS:
2,4-D, 2,4-D [1,1,1-trichloro-2-(2,4-dichlorophenoxy)ethane] 1,16%  
Mecoprop, 2-[4-chloro-2-(2-cyano-2-methyl-1-cyclopropyl)-phenoxyl]propanoic acid 0.077%

For New York State only:

App. 130 to 166 pounds St. Paul Brand Fertilizer with Surge per acre of established turfgrasses. Apply at the recommended application rates in 2 to 3 1/2 hours of product per 1,000 square feet of turf.

STORAGE AND DISPOSAL:
Do not contaminate water, food, or feed by storage or disposal. BROADLEAF WEEDS
St. Paul Brand Fertilizer with Surge is a Surge broadleaf herbicide containing 2,4-D, 2,4-D [1,1,1-trichloro-2-(2,4-dichlorophenoxy)ethane] and Mecoprop, 2-[4-chloro-2-(2-cyano-2-methyl-1-cyclopropyl)-phenoxyl]propanoic acid.

A partial list of susceptible weeds is shown below.

APPLICATION DIRECTIONS:

1. Use these recommendations are recommended for the best control. However, St. Paul Brand Fertilizer with Surge can be applied any time broadleaf weeds are present and the turf is mature. Apply at the recommended rate for the area being treated.

2. Apply the herbicide thoroughly (1 inch or more) to 1 to 2 days before application.

3. Schedule applications in the afternoon when dew is present. Or, sprinkle or irrigate lightly the following day. Do not apply where there are any adverse weather conditions such as rain.

4. Sprinkle or irrigate immediately after application to aid in control.

5. Rainfall or irrigation within 24 hours will reduce effectiveness. Do not apply when the area to be treated has recently been watered.

For New York State only:

App. 130 to 166 pounds St. Paul Brand Fertilizer with Surge per acre of established turfgrasses. Apply at the recommended application rates in 2 to 3 1/2 hours of product per 1,000 square feet of turf.
