PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Harmful if swallowed or absorbed through the skin. Causes moderate eye irritation. Avoid contact with eyes, skin, or clothing. Keep away from children, domestic animals and pets.

Wear long-sleeved shirt, long pants, shoes, socks, and water-proof gloves. Any person who receives careless or unsafe boxed food following application of this product must wear waterproof gloves.

USES SAFETY REQUIREMENTS

Follow manufacturer’s instructions for cleaning/disinfecting PPE. If you use such instructions for washables, wash detergent and hot water. Keep and wash PPE separately from other laundry. Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash hands thoroughly after applying bait and before eating, drinking, chewing gum, using tobacco or using the toilet and change into clean clothing.

ENVIRONMENTAL HAZARDS

This product is extremely toxic to mammals and birds. Dogs, cats and other predatory and scavenging mammals and birds might be poisoned if they feed upon animals that have eaten this bait.

Do not apply directly to water or to areas where surface water is present or to interstate areas below the mean high water mark. Do not contaminate water when disposing of equipment wash water or rinses.

ENHANCED SPECIES CONSIDERATIONS

NOTICE: It is a federal offense to use any pesticide in a manner that results in the death of a member of an endangered species. The use of this product may pass a hazard to federally protected endangered species.

STORAGE AND DISPOSAL

Do not contaminate waste, feed or food by storm orndoutage. Disposal of product and empty containers shall only in original container in a safe, dry place inaccessible to children and pets. Keep containers closed and away from other chemicals.

Pesticide Disposal: Wastes resulting from the use of this product may be placed in trash to be delivered as an approved waste disposal facility.

CONSUMER HANDLING: Non-food container. Do not reuse or refill this container. (Placed: Triple rinse or equivalent). Then offer for recycling or reconditioning or puncture and dispose of in a sanitary landfill or by incineration. (Paper: Disposal of empty container by placing in trash, at approved waste disposal facility or by incineration.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product by any method not specified on this label.

IMPORTANT: Do not expose children, pets, or other non-target animals to rodenticides. To help prevent accidents:

Store product not in a case in a location out of reach of children and pets. Apply bait in locations out of the reach of children, pets, domestic animals and non-target wildlife.

Dissolve of product container, and unsold, spilled and unconditioned bait as specified on the label.

USE RESTRICTIONS: This product may only be applied at the use rates by the application methods specified on the label. This product must be used directly into and pocket rodent barrow systems. This product may be used on livestock, non-food contact areas, and in and around areas where livestock or food is to be used. Do not cover any baited areas with a water seal. Remove or cover any bait spilled on the ground during application. Several treatments may be necessary to control mole and gopher populations. Follow label instructions on the label for mules and gophers.

CONTINUED ON RIGHT PAGE

DIFFERENCES BETWEEN MOLES AND GOPHERS

Moles are burrowing rodents that are primarily found in grassy fields and are not as aggressive as gophers. They do not dig long, narrow tunnels. Their burrows are usually found in grassy areas or gardens. Gophers, on the other hand, are burrowing rodents with long, narrow burrows. They can be found in gardens, orchards, and other areas with rich soil. Gophers are more than twice the size of moles and can weigh up to 2 pounds.

MOLE APPLICATION DIRECTIONS:

SUBSURFACE RUNWAYS: Subsurface runways are depicted as raised ridges of vegetation and soil caused by mole tunnels just below the soil surface. These ridges are especially noticeable when the grass on top of them yellows.

As many as 300 runways may be seen per acre. You must determine which runways are honestly used by moles and apply bait only to these runways. To achieve maximum results, apply bait every 2-4 weeks to the runways that are most noticeable. If the runways have been flattened out, you will know when to look for new runways to treat. Applying more bait or chemicals when the runways are still visible will not increase the effectiveness of the treatment, as moles have learned that these runways are empty. A new runway may develop in the same area within 2-3 weeks.

BEETLE Gopher Application Directions:

In a 10-knot area, fill a bait container with gopher bait. Place the container on the ground and cover with soil. Gophers will enter the bait container and eat the bait.

The container can be checked daily to determine if the gopher bait has been eaten. If no gopher bait has been eaten, the container can be moved to a new location. If gopher bait has been eaten, the container can be moved to a new location.

CORNERS, MIDDLES, AND OPEN TUNNELS: Mole tunnels are made to connect different tunnels. A 4-inch area below the ground surface. Deep tunnel systems are buried by the action of coniferous and deciduous species. Coniferous and deciduous trees are only a few feet apart. The tunnel running between adjacent mounds may be found by probing the soil between mounds. After probing the soil between mounds, the probe is removed and the soil is replaced. Do not cover the soil until the tunnel is found.

Keep out of reach of children.

KEEP OUT OF REACH OF CHILDREN

CAUTION

FIRST AID

KEEP OUT OF REACH OF CHILDREN

CAUTION

FIRST AID

If swallowed:

- Drink plenty of water or provide gentle irrigation to the mouth.

If inhaled:

- Remove the victim from the area and provide fresh air.

If skin or clothing is contaminated:

- Wash the affected area with soap and water.

IF EYES:

- Rinse the affected eye with running water for at least 15 minutes.

TREATMENT FOR PET POISONING

Antidote: Administration of activated charcoal, if used.

NOTE TO PHYSICIAN OR VETERINARIAN

Antidote(s) and/or treatments are not available for mule and gopher poisoning. Follow subsequent instructions on the label for mules and gophers.

See label side for additional precautionary statements.
