**BENTAZON 4**

For postemergence use in beans, corn, peanuts, peas, peppermint, rice, sorghum, soybeans and spearmint. For control of broadleaf weeds and sedges in turfgrass, ornamentals, and other noncropland sites as listed in Directions For Use.

**Active Ingredient:**
Sodium salt of bentazon*  
(3-(1-methylethyl)-1H-2,1,3-benzothiadiazin-4 (3H)-one 2,2-dioxide)  
Other Ingredients:  
Total: 100.0%

* Equivalent to 4 pounds of bentazon per gallon.

**KEEP OUT OF REACH OF CHILDREN**

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand this label, find someone to explain it to you in detail.)

**FIRST AID**

**IF SWALLOWED:**
- Call a poison control center or doctor immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- DO NOT induce vomiting unless told to do so by a poison control center or doctor.
- DO NOT give anything by mouth to an unconscious person.

**IF ON SKIN OR CLOTHING:**
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15 to 20 minutes.
- Call a poison control center or doctor for treatment advice.

**IF IN EYES:**
- Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.
- Remove contact lenses, if present after first 5 minutes, then continue rinsing eyes.
- Call a poison control center or doctor for treatment advice.

**HOT LINE NUMBER**

Have the product container or label with you when calling a poison control center or doctor or going for treatment. For 24-hour medical emergency assistance (human or animal) call 1-800-222-1222. For emergency information, call the National Pesticides Information Center (NPIC) at 1-800-858-7378, Monday to Friday, 7:30 am to 3:30 pm Pacific Time (NPIC Web site: www.npice.orst.edu).

See inside booklet for complete First Aid, Precautionary Statements, Directions For Use, Conditions of Sale and Warranty, and state-specific crop and/or use site restrictions.
PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION. Harmful if swallowed or absorbed through skin. Causes moderate eye irritation. Avoid contact with eyes, skin, or clothing. Wear long-sleeved shirt and long pants, socks, shoes, and chemical-resistant gloves (such as Natural Rubber, Selection Category A). Wear protective eye wear. Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals.

Personal Protective Equipment (PPE)

Applicators and other handlers must wear:

- Some materials that are chemically resistant to this product are made of a waterproof material. If you want more options, follow the instructions for Category A on an EPA chemical-resistance category selection chart.
- Long-sleeved shirt and long pants
- Chemical-resistant gloves (such as Natural Rubber, Selection Category A)
- Shoes plus socks

Follow the manufacturer's instructions for cleaning and maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

Engineering Controls Statement

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 170.240(d)(4-6)), the handler PPE requirements may be reduced or modified as specified in the WPS.

User Safety Recommendations

Users should:
- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

Environmental Hazards

For terrestrial uses, DO NOT apply directly to water, or to areas where surface water is present or to interstitial areas below the mean high water mark. DO NOT contaminate water when disposing of equipment wash waters or rinsate. Bentazon, which is present in this product, is known to leach through soil into groundwater under certain conditions as a result of agricultural use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

Notice: It is a violation of federal law to use any pesticide in a manner that results in the death of an endangered species or in adverse modification of their habitat.

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

DO NOT apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe contact the agency responsible for pesticide regulation.

Unless otherwise directed in supplemental labeling, all applicable directions, restrictions, precautions and Conditions of Safe and Warranty are to be followed. This labeling must be in the user's possession during application.
AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

DO NOT enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 48 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- Coveralls
- Chemical resistant gloves (such as Natural Rubber, Selection Category A)
- Shoes plus socks

DO NOT enter or allow others to enter the treated area until sprays have dried.

PRODUCT INFORMATION

Bentazon 4 is intended for selective postemergence control of certain broadleaf weeds and sedges in beans, corn, peanuts, peas, peppermint, rice, sorghum, soybeans, and spearmint. Bentazon 4 does not control grasses.

Mode of Action

Bentazon 4 is effective mainly through contact action; therefore, weeds must be thoroughly covered with spray.

Crop Tolerance

All labeled crops are tolerant to Bentazon 4. Leaf speckling or bronzing may occur, but plants generally outgrow this condition within 10 days. New growth is normal and crop vigor is not reduced.

Cleaning Spray Equipment

Clean application equipment thoroughly by using a strong detergent or commercial sprayer cleaner according to the manufacturer’s directions and then triple rinse the equipment before and after applying this product.
APPLICATION INSTRUCTIONS

Applications can be made to actively growing weeds as broadcast, band, or spot spray applications at the rates and growth stages listed in the weed tables. The most effective control will result from making postemergence applications of Bentazon 4 early, when weeds are small. Early application produces the most beneficial effect on weed control (exceptions: yellow nutsedge and Canada thistle), allows use of the lower rate (depending on weed species), and makes thorough spray coverage easier to obtain. Delaying application permits weeds to exceed the maximum size stated and will prevent adequate control. DO NOT apply when conditions favor drift from target area or when windspeed is greater than 10 mph. Apply specified rates of Bentazon 4 to actively growing weeds before they reach the maximum sizes listed in Table 1, Application Rates for Specific Weed Growth Stages For All Crops Except Rice. For the specified use rates of Bentazon 4 in rice, refer to Table 3, Application Rates for Rice - Flooded Fields and Table 4, Application Rates for Rice - Drained Fields in Crop-Specific Information section.

Irrigation

In irrigated areas, it may be necessary to irrigate before treatment to ensure active weed growth because weeds growing under drought conditions usually are not satisfactorily controlled.

Spray Coverage

Weeds must be thoroughly covered with spray. Dense leaf canopies shelter smaller weeds and can prevent adequate spray coverage.

Cultivation

DO NOT cultivate within 5 days before applying Bentazon 4 or 7 days after application. Timely cultivation after 7 days may help provide season-long control.

Aerial Application Methods and Equipment

Water Volume: Use a minimum of 5 gallons of water per acre (except 10 gallons for rice).

Spray Pressure: Use up to 40 psi.

Application Equipment: Use only diaphragm-type nozzles that produce cone or fan spray patterns.

Nozzles: Nozzles must not be more than 10 feet above the crop. Nozzles must be oriented to discharge straight back with the air stream (opposite the direction of travel of the aircraft) or at some angle between straight back and straight down.

Special Directions for Aerial Application

To obtain uniform coverage and to avoid drift hazards, follow these guidelines:

- DO NOT apply Bentazon 4 by aircraft when wind is blowing more than 10 mph (except above 5 mph in California).
- Use coarse sprays (larger droplets) as they are less likely to drift.
- DO NOT apply Bentazon 4 by air if sensitive species (such as cotton, sugar beets, sunflowers, or okra) are within 200 feet downward.

The applicator must follow the most restrictive use caution to avoid drift hazards, including those found in this labeling as well as applicable state and local regulations and ordinances.

Ground Application Methods and Equipment (Broadcast)

Water Volume: Use 10 to 20 gallons of spray solution per broadcast acre for optimal performance.

Spray Pressure: Use a minimum of 40 psi (measured at the boom, not at the pump or in the line).

Note: When using the lower volume (i.e. 10 gallons per acre) or when crop and weed foliage is dense, use a minimum of 60 psi for best results.
Application Equipment: Use standard high-pressure pesticide flat fan or hollow cone nozzles spaced up to 20 inches apart. DO NOT use flood, whirl chamber, or channeled droplet applicator (COA) nozzles as erratic coverage can cause inconsistent weed control. DO NOT use selective application equipment such as recirculating sprays or wiper applicators. Good coverage is essential for maximum control.

Bentazon 4 can be used in the following crops:
Beans, dry
Beans, succulent
Peas, succulent
Peas, dry
Rice
Soybeans

</tbody>
</table>

1. If regrowth develops, make a second application of 1 pint 7 to 14 days later. (This rate not applicable in California.)
2. DO NOT treat earlier than leaf stage shown and DO NOT count cotyledon leaves.
3. Use crop oil concentrate or crop oil concentrate plus UAN.
4. For regrowth or new germination, a follow-up application of Bentazon 4 may be necessary.
5. DO NOT treat before seed stalks appears.
6. In KY, IL, IN, MI, and OH, apply 2 to 3 pints of Bentazon 4 per acre (for suppression only).
7. If regrowth occurs, make a second application at the same rate 7 to 10 days later.
8. For better control, apply 1.5 pints per acre of Benazon 4 plus 1 quart of oil concentrate per acre and 1 gallon of UAN solution per acre to velvetleaf plants up to 12". For better control, apply 1.5 pints per acre of Benazon 4 plus 1 quart of oil concentrate and 1 gallon of UAN or AMS solution per acre, followed by a second application at the same rate 4 to 7 days later.
9. For better control, apply 1.5 pints per acre of Bentazon 4. Repeat 10 to 14 days later.
10. Always use UAN or AMS as spray additive.
11. Bentazon 4 does not control black nightshade or Eastern black nightshade.

*For the specified use rates of Bentazon 4 in rice, refer to Table 3, Application Rates for Rice - Flooding Fluids and Table 4, Application Rates for Rice - Drained Fields in Crop-Specific Information section.
**Refer to Crop-Specific Information for Crop-Specific Restrictions and Limitations.
To achieve consistent weed control, one of the following additives is needed: crop oil concentrate, urea ammonium nitrate, or ammonium sulfate. Additives may cause some leaf burn, but new growth is normal and crop vigor is not reduced. The potential for leaf burn is increased when relative humidity and temperature are high. See Table 2, Additive Rate Per Acre for additive rates.

**Oil Concentrate**

A nonphytotoxic oil concentrate may be added to the spray tank for certain weed problems. The oil concentrate must contain either a petroleum oil or vegetable oil base and must meet all of the following criteria:
- be nonphytotoxic,
- contain only EPA-exempt ingredients,
- provide good mixing quality in the jar test, and
- be successful in local experience.

The exact composition of suitable products will vary; however, vegetable and petroleum oil concentrates should contain emulsifiers to provide good mixing quality. Highly refined vegetable oils have proven more satisfactory than unrefined vegetable oils. For additional information, see Application Mixing Information.

Adding an oil concentrate may cause some leaf burn, but new growth is normal and crop vigor is not reduced. The potential for leaf burn is increased when relative humidity and temperature are high. Some oil concentrates cause excessive leaf burn, so refer to your supplier for information concerning successful local experience before purchasing any oil concentrate.

**Oil Concentrate + Nitrogen Solution**

A nonphytotoxic oil concentrate (as referred to above) plus a nitrogen solution (UAN or AMS) can be added to the spray tank with Bentazon 4.

**Urea Ammonium Nitrate (UAN)**

Commonly referred to as 28%, 30% or 32% nitrogen solution, UAN may be added in place of other spray additives to improve control of cocklebur, devil's claw, Pennsylvanian smartweed, velvetleaf, Veronica mallow, wild mustard, and wild sunflower. Bentazon plus a nitrogen solution will not provide adequate control of common ragweed and common lambsquarters. If these weeds or other weeds requiring oil concentrate are present in addition to velvetleaf, then oil concentrate should also be used.

**Ammonium Sulfate (AMS)**

When used, add 3 quarts of liquid AMS (9-0-0 analysis) or 2.5 pounds of granular AMS. Use only fine feed-grade or spray-grade AMS because inferior grades of AMS do not disperse adequately and can plug spray nozzles. Red Eagle International does not recommend applying AMS if applied in less than 10 gallons per acre because of potential problems with precipitation in reduced volumes. Use AMS only if it has been demonstrated to be successful in local experience.

</tbody>
</table>

Table 2. Additive Rate Per Acre

* AMS is ammonium sulfate, not ammonium nitrate.
AMS and UAN are not to be used in California. AMS solution is not recommended due to potential precipitation problems in reduced water volumes. AMS can be used provided a minimum of 10 gallons of solution per acre is applied. Use only if the source of AMS has been demonstrated to be successful in local experience.

Application Mixing Information

Additives and/or other pesticides may be mixed in the spray tank with Bentazon 4 using the information in this section.

Tank Mix Partners/Components

The following products may be tank mixed with Bentazon 4 according to the specific tank mixing instructions in this label and respective product labels.

- Atrazine
- Butox® atrazin
- Cayley® atrazine
- Classic® atrazine
- Cabo® azadene
- Concor® chlorimuron + chlorimuron
- Fencit® 75 DF (2.5)
- FastRate® chlorimuron-methyl
- FarmStar® formulation
- Laser® chetsulfuron
- Liberty® glyphosate
- Lightning® imazapic + imazpyr
- Markmaster® atrazine + chetsulfuron
- MCPCA
- Outlook® dimethenamid-P
- Paradox®

Add components to the tank in the sequence indicated in the Mixing Order using 2 teaspoons for each pound or 1 teaspoon for each pint of recommended label rate per acre. Always cap the jar and invert 10 cycles between component additions. When the components have all been added to the jar, let the solution stand for 15 minutes. Evaluate the solution for uniformity and stability. The spray solution should not have free oil on the surface, nor fine particles that precipitate to the bottom, nor thick (dabbed) texture. If the spray solution is not compatible, repeat the compatibility test with the addition of a suitable agent. If the solution is still incompatible, DO NOT mix the ingredients in the same tank.
Mixing Order
When mixing additives and/or other pesticides in a spray tank, add the products to be used in the following sequence:

1. Water, Begin by agitating a thoroughly clean spray tank three-quarters full of clean water.
2. Agitation. Maintain constant agitation throughout mixing and application.
3. Products in PVA bags. Place any product contained in water-soluble PVA bags into the mixing tank. Wait until all water-soluble PVA bags have fully dissolved and the product is evenly mixed in the spray tank before continuing.
4. Water-dispersible products (such as dry flowables, wettable powders, suspension concentrates, or suspenos- emulsions). If an inducer is used, rinse it thoroughly after the component has been added.
5. Water-soluble products (such as Bentazon 4). If an inducer is used, rinse it thoroughly after the component has been added.
6. Emulsifiable concentrates (such as oil concentrate when applicable). If an inducer is used, rinse it thoroughly after the component has been added.
7. Water-soluble additives (such as AMS or UAN when applicable). If an inducer is used, rinse it thoroughly after the component has been added.
8. Remaining quantity of water. Maintain constant agitation during application.

Restrictions and Limitations - All Crops
- Maximum seasonal use rate: DO NOT apply more than a total of 4 pints of Bentazon 4 per acre, per season.
- DO NOT apply more than a total of 2.0 pounds of bentazon ai (from all sources) per acre, per season.
- Restricted-entry interval (REI): DO NOT enter or allow other entry into treated areas during the restricted entry interval of 48 hours.
- DO NOT apply to weeds under stress such as lack of moisture, herbicide injury, mechanical injury or cold temperatures, as unsatisfactory control may result.
- DO NOT apply to crops subjected to stress conditions such as soil damage, flooding, drought, injury from other herbicides, or widely fluctuating temperatures, as crop injury may result.
- DO NOT apply to crops that show injury (leaf yellowing or plant stunting) produced by any other prior herbicide applications because this injury may be enhanced or prolonged.
- Rainfast period: Rainfall or overhead irrigation within 4 hours after application may reduce the effectiveness of Bentazon 4.
- DO NOT apply through any type of irrigation system.

Crop-Specific Information
Apply Bentazon 4 early postemergence before weeds reach the maximum size listed in Table 1. Application Rates for Specific Weed Growth Stages for All Crops Except Rice (for rice, see rice section below).

Beans, Dry and Succulent
Beans are tolerant to Bentazon 4 after the first trituration leaf has fully expanded. Even at the tolerant stages, yellowing, browning, speckling or burning of leaves may occur under certain conditions (see Crop-Specific Restrictions and Limitations). This temporary injury is generally outgrown without delaying podset or maturity or reducing yield. Using oil with Bentazon 4 may increase injury and may reduce yields.

Tolerant bean types are adzuki, pinto, pinto, pink, great northern, kidney, red, white, cranberry, black turtle, small flageolet, large flageolet, and snap beans.
Crop-Specific Restrictions and Limitations
DO NOT apply Bentazon 4 as a solo treatment to dry and succulent beans grown in Georgia and South Carolina as severe crop damage may occur.
Bentazon 4 may be applied from 6 to 16 fluid ounces per acre to dry and succulent beans grown in Georgia and South Carolina but only when tank mixed with Raptor herbicide or Pursuit herbicide. Refer to the Raptor and Pursuit labels for additional use directions or restrictions.
DO NOT apply Bentazon 4 to bean fields until beans have at least the first trifoliate leaf fully expanded because severe crop damage may occur.
DO NOT apply Bentazon 4 to blackeyes grown in California or to garbanzo beans or lupines at any stage of growth, as severe crop damage may occur.
DO NOT apply Bentazon 4 to dry or succulent beans within 30 days of harvest.
Use of an oil additive with Bentazon 4 on snap beans may increase the leaf burn and injury potential.

California Only: Not recommended for use on adzuki beans. For yellow nutsedge control, apply 2 pints of Bentazon 4 per acre when plants are 6 to 8 inches tall. Make a second application at the same rate 10 to 14 days later.

Tank Mixes - Dry Beans
Bentazon 4 may be applied in a tank mix with one of the following herbicides:
- Outlook®
- Pursuit®
- Raptor®

Tank Mixes - Succulent Beans
Bentazon 4 may be applied in a tank mix with one of the following herbicides:
- Pursuit®
- Raptor®

Com and Sorghum
Com types include field, sweet, popcorn, and corn grown for seed or silage. Sorghum types include grain and forage sorghum. Seed producers should consult the seed company regarding tolerance of seed production hybrids to Bentazon 4.

Crop-Specific Restrictions and Limitations
Apply no more than 2 pints of Bentazon 4 per acre per season in sorghum.
DO NOT apply to sorghum that is heading or blooming.
DO NOT graze treated corn and sorghum fields for at least 12 days after the last treatment with Bentazon 4.
California only: Not recommended for controlling yellow nutsedge in corn or sorghum. DO NOT use on forage sorghum.

Tank Mixes - Com and Sorghum
The tank mix of Bentazon 4 + atrazine is not applicable in California.
Bentazon 4 may be applied in a tank mix with one of the following herbicides on com (including herbicides registered for use in com hybrids tolerant to glyphosate, glufosinate and imazazolone):
- Atrazine 
- Liberty®
- LibertyHerb®
- LibertyUltra®
- LibertyZone®
- Marksman®
- Marksman®
- Lightfoot®

Bentazon 4 may be applied in a tank mix with one of the following herbicides in sorghum:
- Atrazine
- Liberty®
- LibertyHerb®
- Marksman®
- Marksman®
- Lightfoot®

Page 10 of 24
Peppermint and Spearmint

Peppermint and spearmint are tolerant to Bentazon 4; however, some leaf burning may occur under certain conditions, such as when plants are growing very actively and have extensive new succulent tissue. Mint plants generally outgrow this condition within 10 days.

For hairy nightshade and Kochia control, Bentazon 4 may be used up to 4.0 pints per acre as a single application.

For Kochia control, add oil concentrate.

Tank Mixes - Peppermint and Spearmint

Bentazon 4 may be applied in a tank mix with one of the following herbicides:
- Raptor®
- Sinbar®
- Poast®
- Stinger®

Peas, Dry and Succulent

Peas are tolerant to Bentazon 4 after 3 pairs of leaves (or 4 nodos) are present. Pea injury such as yellowing, bronzing, speckling or burning of leaves may occur under certain conditions. This temporary injury is generally outgrown without delaying podding or maturity or reducing yield. Tolerant pea types are garden, English, and southern peas.

In western irrigated areas, avoid applying Bentazon 4 during prolonged periods of cold weather (day temperature below 75°F and night temperature below 55°F for 2 to 5 days) because weed control may be nullified.

Crop-Specific Restrictions and Limitations
- DO NOT apply Bentazon 4 as a solo treatment to dry and succulent peas grown in Georgia and South Carolina as severe crop damage may occur. Bentazon 4 may be applied from 6 to 18 fluid ounces per acre to dry and succulent peas grown in Georgia and South Carolina but only when tank mixed with Raptor® or Poast. Refer to the Raptor and Poast labels for additional use directions or restrictions.
- DO NOT apply Bentazon 4 to dry peas within 30 days of harvest.
- DO NOT apply Bentazon 4 to succulent peas within 10 days of harvest.
- In California, DO NOT apply to succulent peas within 30 days of harvest.
- DO NOT apply Bentazon 4 to peas under stress from root rot.
- DO NOT apply Bentazon 4 to dry peas grown in California or to garbanzo beans or to lupines at any stage of growth, as severe crop damage may occur.
- DO NOT apply Bentazon 4 when peas are in bloom.
- DO NOT add oil to Bentazon 4 for use on peas, except for use in the Pacific Northwest (PNW).
- Tank mix treatments of insecticides or nematicides may also predispose the peas to injury from Bentazon 4.

Tank Mixes - Peas

Tank mixes not applicable in California.
Bentazon 4 may be applied in a tank mix with one of the following herbicides:
- MCPA
- Raptor®
- Pursuit®

The Bentazon 4 + Thistelton tank mix is for use in ME, NH, VT, MA, CT, RI, NY, PA, NJ, VA, MD, DE, WA, ID, and OR. This tank mix should be applied after the 3-node stage (4-node stage) of peas, but not later than 3 nodes before pea flowering.
For Improved control of pigweed species and common lambsquarers, a tank mix of Bentazon 4 + MCPA may be used.

**Tank Mix Restrictions and Limitations**
- **DO NOT** use crop oil concentrate, other oil-based additives, or any other spray additives or surfactants with these tank mixes.
- **DO NOT** apply the tank mix to peas when temperatures exceed 60°F.
- **DO NOT** apply the tank mix to peas after pea flower buds appear.
- Crops other than peas may be severely injured by drift. Cotton, beans, grapes, tomatoes, and ornamentals are particularly sensitive to drift.

**Peanuts**
Bentazon 4 can be applied from peanut cracking through pegging. Peanut hay and forage may be fed to livestock. In-furrow treatments of insecticides and nematicides may predispose peanuts to injury from Bentazon 4.

**Crop-Specific Restrictions and Limitations**
- **DO NOT** graze treated peanut fields for at least 50 days after the last Bentazon 4 treatment.

**Tank Mixes - Peanuts**
Tank mixes not applicable in California.

Bentazon 4 may be applied in a tank mix with one of the following herbicides:
- Acifluorfen 2SL
- Starfire
- Outlook
- Post

The Bentazon 4 + Parquat tank mix should be applied at the ground crack stage of peanuts to control an early flush of weeds. A second application may be applied up to 28 days after ground crack stage. Always add a nonionic surfactant containing at least 50% surfactant active agent at recommended rates to the Bentazon 4 + Parquat tank mix.

**Tank Mix Restrictions and Limitations**
- **DO NOT** include UAN solution or ammonium sulfate when tank mixing Bentazon 4 + Acifluorfen 2SL + Parquat.
- **DO NOT** use crop oil concentrate or any other oil-based additive with the Bentazon 4 + Parquat tank mix.
- **DO NOT** add oil concentrate, UAN, or any other additives to Bentazon 4 + 2,4-DB tank mix.
- Use only amino formulations of 2,4-DB.

**Rice**

Application Information
- Not for use in California.
- Apply Bentazon 4 early postemergence, before weeds exceed the maximum size listed in Tables 3 and 4.

Application Equipment
- For optimal coverage when applying Bentazon 4 by air in rice, orient all nozzles straight down. Nozzles must not be located farther out than three-fourths the distance from the center of the aircraft to the end of the wing or rotor.
Alternate Flooding Culture

In Texas, Louisiana, Arkansas, and Mississippi, weed growth stages generally correspond to rice that is flowering (podding) and occur before the permanent flood. Bentazon 4 must be applied when there is no water on the field and 24 hours or more prior to flooding. If Bentazon 4 cannot be applied until after flooding, see directions under Continuous Flooding Culture.

Continuous Flooding Culture

In areas using continuous flooding culture, or when treating after the permanent flooding, treatment should be made only when weeds are above the surface of the water. Weeds submerged at the time of application will not be adequately controlled. For early treatment, water may be partly or completely drained to expose more weed growth to spray applications of Bentazon 4. DO NOT raise water level for at least 24 hours after application as unsatisfactory control may result. DO NOT use ground equipment to apply to flooded fields because splashing will wash Bentazon 4 off weed leaf surfaces and ineffective control may result.

Crop-Specific Restrictions and Limitations

- Rice straw may be fed to livestock.
- DO NOT use Bentazon 4 on rice fields in which commercial cultivation of catfish or crayfish is practiced.
- DO NOT use water containing Bentazon 4 residues from rice cultivation to irrigate crops used for food or feed unless Bentazon 4 is registered for use on these crops.
- DO NOT apply more than 4 pints of Bentazon 4 per acre per season whether one or two rice crops (including ratoon) are grown that season.

Tank Mixes - Rice

Bentazon 4 may be applied in a tank mix with one of the following herbicides:

- Acifluorfen 2
- Prepanil
- Storm®
- Lontox®

When using Storm® herbicide in a tank mix, use 1.5 pints of Storm with 0.5 to 1.0 pint of Bentazon 4 per acre.

Tank Mix Restrictions and Limitations

- Apply the Bentazon 4 + Lontox tank mix within 7 days of establishing permanent flood.
- DO NOT use crop oil concentrate with the Bentazon 4 + Lontox tank mix.
- Add propoxuron to the tank mix of Bentazon 4 based on active ingredient (al) of formulation used.
- Test proposed products for physical tank mix compatibility with Bentazon 4.
- Apply the Bentazon 4 + Storm tank mix after the 34rd stage in rice.

</table>

If a second weed flush develops after the first application, re-treat according to this rate table.

**Soybeans**

Soybeans are tolerant to Bentazon 4 at all stages of growth. Slight leaf stippling and leaf bronzing may occur under certain conditions, but crops generally outgrow these conditions within 10 days.

**Crop-Specific Restrictions and Limitations**

DO NOT graze or cut treated soybean fields for forage or hay for at least 30 days after the last treatment of Bentazon 4.
Tank Mixes - Soybeans

Tank mixes not applicable in California.

Bentazon 4 may be applied in a tank mix with one of the following herbicides (including RoundUp Ready®, LibertyLink®, and STS™ varieties):

- Acifluorfen®
- Atrazine®
- Cobra®
- Concert®
- FirstRate®
- Florent®
- Liberty®
- Outlook®
- Pisolate®
- Peast®

- Poast Plus®
- Pursuit®
- Raptor®
- Resource®
- Resource®
- Roundup Ultra
- Scepter®
- Synchrony® STS®
- 2,4-OB amine

- Flexator®
- Reliance®
- Raptor®
- Reft®
- Reliance® STS®
- Resource®
- Scepter®
- STS 0°
- Scepter®
- Synchrony® STS®
- 2,4-OB amine

For these tank mixes, the use of a nonionic surfactant (1 to 2 pints per 100 gallons) plus UAN (2 to 4 pints per acre) is recommended.

Bentazon 4 + Acifluorfen 2 + Peast

Tank Mix Restrictions and Limitations

Oil concentrate must be used with the Bentazon 4 + Acifluorfen 2 + Peast tank mix in place of a spray surfactant.

Bentazon 4 + Reliance STS

Tank Mix Restrictions and Limitations

DO NOT add oil concentrate to this tank mix for use with soybean varieties other than those designated as STS.

Bentazon 4 + 2,4-OB amine

Use only amine formulations of 2,4-OB.

Use no other adjuvant except UAN at 2 to 4 pints per acre with this tank mix.

Tank Mix Restrictions and Limitations

DO NOT apply more than 1 application of this tank mix per season.

The use of this tank mix will cause soybean foliar injury (such as burning, bronzing or crinkling) and may reduce yields.

DO NOT apply this tank mix on soybeans that show symptoms of disease such as Phytophthora root rot.

Mixing with Insecticides

A tank mix that requires post-emergence or fall control of certain insects in the soybean crop. It is possible to tank mix an insecticide with Bentazon 4 if the proper application timing of the insecticide coincides with the application timing of Bentazon 4.

Insecticides that may be used are Fenoxaprop®, Pyridate®, Pyridate®, and Linuron® 4E. DO NOT tank mix Bentazon 4 with methamidophos or Sivanto®. The tank mix addition of an insecticide to Bentazon 4 may increase the potential for crop injury.

The exact conditions under which an insecticide is tank mixed with Bentazon 4 may vary and these conditions may reduce good mixing quality.

Before a tank mix of Bentazon 4 and an insecticide is used, test the combination as instructed by the Compatibility Test for Mix Components.
DIRECTIONS FOR USE: Turf and Ornamental

Bentazon 4 is a postemergence herbicide for selective control of broadleaf weeds, annual sedges, and yellow nutsedge in the following use sites:

- Established turfgrass
- Ornamentals
- Nurseries
- Noncropland sites, roadways, and rights-of-way.

Refer to the Specific Use Site Information sections for specific application directions and restrictions and limitations for each use site.

Apply Bentazon 4 postemergence to actively growing weeds under good soil moisture conditions. If soil moisture is not adequate for active weed growth, irrigate before applying Bentazon 4. Weeds growing under drought conditions usually are not satisfactorily controlled.

Bentazon 4 does not control grass weeds. Bentazon 4 is effective mainly through contact activity; all target weeds must be thoroughly covered with spray.

Rainfall or overhead sprinkler irrigation within 8 hours after application may reduce the effectiveness of Bentazon 4.

Sprayer Equipment

Apply Bentazon 4 with hand-held pump-up and knapsack sprayers, or hose-end type sprayers. Use standard high-pressure pesticide hollow-cone or flat-fan nozzles spaced 20-inches apart. DO NOT use hollow, flat-fan, or controlled droplet nozzle (CDN) nozzles.

Apply Bentazon 4 with a minimum water volume of 1 gallon per 1000 sq ft (40 gallons/A) and a minimum spray pressure of 40 psi measured at the boom exit at the pump orifice. When foliage or weed population is dense, increase water volume to the equivalent of 2.5 gallons per 1000 sq ft and spray pressure to 80 psi.

Clean the sprayer thoroughly before applying Bentazon 4, particularly if the herbicide previously used has the potential to injure turfgrass or ornamentals.

Application Mixing Instructions

Fill a thoroughly clean spray tank 1/2 to 2/3 full of clean water. Start agitation. Add Bentazon 4 and allow the components to mix thoroughly. Add oil concentrate and the remaining volume of water. Maintain constant agitation during application.

Mix only enough spray solution for one use. Use a fresh spray mixture each time.

Application Use Rates

Apply Bentazon 4 at the use rates listed in Table 6 plus an oil concentrate.

Table 6. Application Rates* for Bentazon 4

<table>
<thead>
<tr>
<th>Spray Area</th>
<th>Bentazon 4 Use Rate (fl oz)</th>
<th>Water as Spray Carrier (gals)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1000 sq ft</td>

<tr>
<td>1 acre</td>
<td>Low 12</td>
<td>40 to 60</td>
</tr>
<tr>
<td>1 acre</td>
<td>High 18</td>
<td>40 to 60</td>
</tr>
</tbody>
</table>

*Using these use rates to spot spray individual weeds may result in excessive dosage and possible turfgrass or ornamental injury.

*Application use rates depend on size of target weeds species; see Table 6 for Weed Control.

Page 16 of 24
• In a single application, DO NOT exceed 0.75 oz of Bentazon 4 per 1000 sq ft.
• 16 fl ozs (1 pint) of Bentazon 4 contains 1.0 lb of bentazon (active ingredient).
• In a single application, DO NOT exceed 16 fl ozs (1 pint) of Bentazon 4 per acre.
• DO NOT exceed a total of 32 fl ozs (2 pints) of Bentazon 4 per acre per season.

Addition of Oil Concentrate
A nonphytotoxic oil concentrate must be added to the spray tank for optimum weed control. DO NOT apply oil concentrate in tank mix with Bentazon 4 over the top of ornamentals. The oil concentrate must contain either a petroleum-oil or vegetable-oil base (such as methylated seed oil (MSO) or crop oil concentrate [COC]) and must meet all the following criteria:

- Nonphytotoxic
- Contain only EPA-exempt ingredients
- Provide good mixing quality in the jar test (see following)
- Successful in local experience

The exact composition of suitable products will vary; however, petroleum-oil or vegetable-oil concentrates should contain emulsifiers to provide good mixing quality. Highly refined vegetable oils are more satisfactory than unrefined vegetable oils. To determine the suitability of oil concentrates with Bentazon 4, conduct the following jar test:

Jar Test to Estimate Oil Concentrate Suitability

Water Supply - Use only water from the intended source at the source temperature.
Water Spray Volume - For a spray volume of 1 gallon per 1000 sq ft, use 6 2/3 cups (160 ml) of water. For other spray volumes, adjust proportionately.
Herbicide and oil concentrate - Add 2 teaspoons each of herbicide and oil concentrate for each 0.75 fl oz per 1000 sq ft of label rate.

Add components in the following sequence, gently mixing between additions:
1. Bentazon 4
2. Tank mix product if used
3. Oil concentrate

Cap jar, invert 10 cycles, let stand for 15 minutes.

Evaluate - An ideal tank mix combination will be uniform. The suitability of the oil concentrate is questionable if any of the following are observed:
• Free oil at the surface - Film or globules
• Precipitation - Fine particles which may be suspended in the liquid or found as a precipitated layer at the bottom of the jar
• Clumping - Thickening texture (coagulated) resembling yogurt or a curd-like texture as with cottage cheese

Oil Concentrate Rate
Apply oil concentrate at 0.75 fl oz per 1000 sq ft (equivalent to 2 pints/A).

Adding oil concentrate to Bentazon 4 may cause a slight leaf burn on desired plants ( turfgrass, ornamentals, etc.) when relative humidity and temperature are high. Refer to your Bentazon 4 supplier for information on successful local experience before purchasing oil concentrate.

DO NOT apply Bentazon 4 plus oil concentrate with pesticides whose labels caution against their use with oil adjuvants.
Application Restrictions and Limitations

DO NOT exceed a total of 1 lb bentazon (active ingredient) per acre in a single application or 2 lbs bentazon (active ingredient) per acre per season.

DO NOT apply during windy conditions because spray drift may cause damage to adjacent ornamental plants.

Physical incompatibility, reduced weed control, or turfgrass and/or ornamental injury may result from mixing Bentazon 4 with pesticides (fungicides, herbicides, insecticides or miticides), additives or fertilizers.

Weeds Controlled

Apply Bentazon 4 early postemergence to actively growing weeds before they reach the maximum size listed in Table 6. Early application to newly emerged or small weeds will provide the most effective weed control. Delaying application will allow weeds to continue growth beyond the maximum size stated and will result in inadequate control. The exceptions are yellow nutsedge and Canada thistle. Special instructions for controlling these two weeds follow.

</tbody>
</table>

- Control may be partial or inconsistent.
- If a second weed flush develops after the first application, re-treat according to this rate table.
- DO NOT treat rosette before seed stalk appears.
- Requires addition of oil concentrate at 0.75 fl oz/1000 sq ft (2 pts/A)
- NR = Not recommended for use

Special Directions for Weed Problems:

**Canada Thistle**

Apply 0.75 fl oz of Bentazon 4 per 1,000 sq ft (16 fl oz/A) when Canada thistle is from 8 inches tall to the bud stage. If desired control is not obtained with the first application, make a second application at the same rate 7-10 days later or when new growth appears.

**Musk Thistle**

Apply 0.75 fl oz of Bentazon 4 per 1,000 sq ft (16 fl oz/A) when musk thistle is in the rosette stage, no larger than 10 inches in diameter. If desired control is not obtained with the first application, make a second application at the same rate 7 to 10 days later or when new growth appears.

**Yellow Nutsedge**

Make two applications of Bentazon 4 for best control of yellow nutsedge. Apply 0.55-0.75 fl oz of Bentazon 4 per 1,000 sq ft (12 to 16 fl oz/A) when yellow nutsedge is 6 inches to 8 inches tall. Make a second application at the same rate 7-10 days later or when new growth appears later in the season. Thorough spray coverage of yellow nutsedge is essential for maximum control.

Yellow nutsedge emerges May through July in the northern United States, but it emerges throughout the year in the southern United States. Plan initial applications when yellow nutsedge has emerged because Bentazon 4 will only control nutsedge plants that have emerged.

Specific Use Site Information:

**Established Turfgrass**

Bentazon 4 may be applied to established turfgrass growing in areas such as athletic fields, commercial or residential settings, golf courses, recreational areas, sod farms, or any other maintained area of established turfgrass.

Bentazon 4 may be used on the following established turfgrass species:

- bluegrass, fescue, bentgrass, Bermudagrass, Bahiagrass, carpetgrass, zoysiagrass, ryegrass, St. Augustine grass, carpetgrass, and buffalograss.
Bentazon 4 will control annual sedges, common groundsel, common purslane, daisyflower, wild mustard, and yellow nutsedge in established turfgrass. See Table 6 for other weeds controlled.

**Turf Restrictions and Limitations**
- **DO NOT** apply Bentazon 4 to any newly seeded or newly sprigged turfgrass until seedlings or sprigs are well established or injury may result.
- **DO NOT** apply Bentazon 4 to turfgrass that has been under stress such as drought, cold temperature, or injury from other herbicides or pesticides.
- **DO NOT** apply Bentazon 4 to any newly seeded or newly sprigged turfgrass until seedlings or sprigs are well established or injury may result.
- **DO NOT** use in golf course greens or collars.
- In unscarred established turfgrass, make the first application of Bentazon 4 after emergence but before annual sedge, Canada thistle, and yellow nutsedge are one inch tall. Annual broadleaf weeds should be no taller than 4 inches.
- For best control of broadleaf weeds, **DO NOT** mow turfgrass within 3 days before or after application.
- For best control of sedges, **DO NOT** mow turfgrass within 5 days of application.
- When treating turfgrass with Bentazon 4, avoid over-the-top spraying of adjacent ornamental trees, shrubs, and flowers unless otherwise specified in this label. Spraying near the base of established ornamental trees, shrubs, and flowers should not result in injury except for sycamore and rhododendrons.

**Tank Mixes on Established Turfgrass**
For postemergence control of other broadleaf weeds or sedges not listed on this label, tank mix Bentazon 4 with other products registered for use in turfgrass such as Image 70 DG herbicide, Talon herbicide, 2,4-D, atrazine, MSMA, and mixes of 2,4-D, MCPP (mecoprop) or 2,4-0P (dichlorprop). Some of these products cannot be used on all turfgrass sites or species. Refer to the respective product labels for site and species restrictions. A tank mix with Segment herbicide may be used on zoysia grass and fine fescue species.

Determine the compatibility of the potential tank mix product before mixing with Bentazon 4 in the spray tank. An anti-foaming agent may be used if needed. **DO NOT** use a surfactant or oil additive with 2,4-D, MCPP, or 2,4-0P.

Read each tank mix product label for Directions For Use, Precautionary Statements, and Restrictions and Limitations. The most restrictive labeling applies in all tank mixes.

Consult local professional authorities when using tank mix combinations other than those specified by Red Eagle International. Otherwise, test a small area of the site with the desired tank mix combination and allow 7 to 10 days to evaluate the potential for injury.

**Ornamentals, Nursery, Noncrop Site, Roadsides, and Rights-of-Way**
Bentazon 4 may be applied over the top of certain ornamental species listed in Table 3. **DO NOT** apply all concentrate in tank mix with Bentazon 4 over the top of ornamentals. Because of the variability within species, in application technique and manner of use, it has not been fully determined if Bentazon 4 can be safely used on all ornamentals or nursery plants under all growing conditions. Therefore, the user should apply to a few plants to determine if Bentazon 4 can be safely used for broadcast application.

For all other landscapes and ornamental trees, shrubs, flowers, and nursery plants not listed in Table 7, apply Bentazon 4 as a directed spray away from the foliage of desired plants. **DO NOT** apply Bentazon 4 as a directed spray under the tree line or over the roots of sycamore and rhododendron or injury may occur. **DO NOT** apply if the risk of injury to these plants is not acceptable.

Bentazon 4 may be used in sites where grass vegetation must be maintained.

* Make no more than one application per crop per growing season. Some species within genera may vary in degree of tolerance. Prior to application across a large number of plants within the same species, test Bentazon 4 on a small number of plants of that species and observe for 2 weeks. DO NOT apply crop oil with applications of Bentazon 4 over the top of ornamentals or injury may occur.

**Ornamentals and Nursery Restrictions and Limitations**

**DO NOT** apply Bentazon 4 to ornamental or nursery plants that have been subject to stress conditions such as hail damage, flooding, drought, extreme heat, or widely fluctuating temperatures or crop injury may result.

**DO NOT** apply Bentazon 4 if ornamental or nursery plants show injury (leaf phytotoxicity or plant stunting) produced by prior herbicide applications because the injury may be enhanced or prolonged.

**Ornamental Tank Mixes**

Tank Mix of Bentazon 4 + Tower herbicide. Apply a tank mix of Bentazon 4 plus Tower as a post-emergence directed spray to control yellow nutsedge and certain emerged broadleaf weeds listed on this Bentazon 4 label. This tank mix will also control certain broadleaf and grass weeds listed on the Tower label that have not emerged. Apply this tank mix to a directed spray away from the foliage of ornamental plants. If any desirable plant foliage receives direct or indirect application, wash the solution off the foliage immediately. Read each tank mix product label for Directions For Use, Precautionary Statements, and Restrictions and Limitations. The most restrictive labeling applies in all tank mixes.

Tank Mix of Bentazon 4 + Segregate herbicide. A tank mix of Bentazon 4 plus Segregate may be applied to control yellow nutsedge, certain broadleaf weeds and annual and perennial grass weeds. This tank mix will not control weeds and grasses that have not emerged. Apply as a directed spray away from the foliage of ornamental plants. If any desirable plant foliage receives direct or indirect application, wash the solution off the foliage immediately. Read each tank mix product label for Directions For Use, Precautionary Statements, and Restrictions and Limitations. The most restrictive labeling applies in all tank mixes.

**Other Tank Mixes.** Bentazon 4 may be tank mixed with other compatible products registered for use in ornamentals. Apply tank mixes of Bentazon 4 and other products as a directed spray away from the foliage of ornamental plants. If any desirable plant foliage receives direct or indirect application, wash the solution off the foliage immediately. When applying tank mixes not specified on this label, test the application on a small area to determine the safety of the anticipated tank mix. Evaluate the potential for injury 5 to 7 days later, before making a general application of this tank mix.

Read each tank mix product label for Directions For Use, Precautionary Statements, and Restrictions and Limitations. The most restrictive labeling applies in all tank mixes.
STORAGE AND DISPOSAL
DO NOT contaminate water, feed, or food by storage or disposal.

Pesticide Storage
DO NOT store at less than 32°F and DO NOT allow product to freeze.

Pesticide Disposal
Wastes resulting from the use of this product may be disposed of on-site or at an approved waste disposal facility.

CONTAINER DISPOSAL
Nonrefillable Container, DO NOT reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying; then offer for recycling, if available, or reconditioning, if appropriate, or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures approved by state and local authorities.

Triple rinse containers small enough to shake (capacity < 5 gallons) as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinse into application equipment or a mix tank, or store rinse for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.
