PRECAUTIONARY STATEMENTS:
Hazards to Humans and Domestic Animals

CAUTION: Harmful if swallowed. Keep away from children, domestic animals and pets. Wash thoroughly with soap and water after handling, and before eating, drinking, chewing gum, or using tobacco. Any person who handles bait, refills a station, or retrieves carcasses or unused bait must wash hands.

FIRST AID

Have label with you when obtaining treatment advice.

If swallowed:
- Call a poison control center, doctor or 1-800-658-7788 immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- Do not induce vomiting unless told to do so by the poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

If on skin or clothing:
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for treatment advice.

TREATMENT FOR PET POISONING

If animal eats bait, call veterinarian at once.

NOTE TO PHYSICIAN OR VETERINARIAN

Contains the nerve poison Bromadiolone. This product is not an anticoagulant rodenticide. For humans or animals ingesting bait and/or showing poisoning signs (such as muscle tremors, loss of hind limb use, or seizures for animals), limit absorption by either emesis or gastric lavage. Subclinical symptoms, if present, would be the result of cerebral edema and should be treated accordingly through administration of an osmotic diuretic and corticosteroid.

ENVIRONMENTAL HAZARDS:

This product is toxic to fish, birds, and other wildlife. Dogs and scavenging mammals and birds might be poisoned if they feed upon animals that have eaten this bait.

DIRECTIONS FOR USE:

1. Avoid using too much in one location.

READ THIS LABEL and follow all use directions and use precautions. Use only for the sites, pests, and application methods described on this label.

IMPORTANT: Do not expose children, pets or other nontarget animals to rodenticides. To help prevent accidents:

1. Store product not in use in a location out of reach of children and pets.

2. Dispose of product container, bait station, and unused, spoiled, or unwanted bait as specified on this label.

USE RESTRICTIONS:

This bait station may be used in indoor areas accessible to children, consistent with all use restrictions and other requirements indicated in this label. DO NOT USE THIS PRODUCT OUTDOORS OR IN AREAS ACCESSIBLE TO PETS. This product may only be used to control house mice inside homes and other residential buildings. Do not place bait stations in areas where there may be a possibility of contaminating food or surfaces that come in direct contact with food.

SELECTION OF TREATMENT AREAS: Outline areas where house mice will most likely find and consume bait. Generally, these areas are along walls, by food articles, in corners and concealed places, between floors and walls, or in locations where house mice or their signs have been seen. Remove as much alternative food as possible.

APPLICATION DIRECTIONS:

1. Remove bait station from package.

2. While wearing gloves, place one block of bait in the bait station. See additional GRAPHICS AND TEXT.

3. Place bait station on the floor, with flat side down, in areas where signs of house mice have been seen in the types of buildings identified under USE RESTRICTIONS. Use one bait station per typical placement. If more than one bait station is used, space the stations 6 to 12 feet apart in suitable locations (see SELECTION OF TREATMENT AREAS) in infested buildings. After several days, inspect placements and refill bait stations if contents have been consumed or are contaminated. If no feeding has occurred within three days, bait stations may be moved to other appropriate locations in the building where there is evidence of feeding.

Baiting Schedule: Highest bait consumption is expected on the first day or two after treatment begins. Normally, the volume of bait consumed will be significantly less than bromethalin baits than with anticoagulant baits. Although one night's feeding will usually provide a lethal dose, maintain an uninterrupted supply of bait for at least one week to provide all house mice a chance to feed on the bait. Continue baiting until at least 4 days have passed without signs of new feeding by house mice.

Follow-Up: Wear gloves, collect and properly dispose of all dead animals and litter from bait. To discourage reinfection, limit access of rodent food, water and harborage as much as possible. If reinfection does occur, repeat treatment.

STORAGE AND DISPOSAL:

PESTICIDE STORAGE: Store in original container in a cool, dry place inaccessible to children and pets.

PESTICIDE DISPOSAL AND CONTAINER HANDLING: Non-refillable container. Do not reuse or refill this container, except as described in the directions for use. If empty: Place in trash or offer for recycling if available. If partly filled: Call your local waste disposal agency for disposal instructions. Never place unused product down any indoor or outdoor drain.

HOW TO OPEN:

1. Apply these:

   Hold the bait station in one hand with your thumb on the bottom and middle finger on the top tab. While squeezing the front and back tabs, lift the back tab on the bottom center of the bait station and pull up.

HOW TO FILL THE BAIT STATION:

1. Open the pack and slide the plastic slide out as far as it will go.
