KILLS NORWAY RATS, ROOF RATS AND HOUSE MICE

This Product May Only Be Used Inside and Within 100 Feet of Man-Made Structures and For All Burner Baiting

USE RESTRICTIONS: This product can only be used to control Norway rats, roof rats and house mice in and within 100 feet of man-made structures constructed in a manner so as to be available to commercial indoor termiticide operations and/or for hubology or attracting rodents. Examples of such structures include homes and other permanent or temporary residences, food processing facilities, industrial and commercial buildings, trash storage, agricultural and public buildings, transit vehicles (trucks, trains, aircraft, docks) and port or terminal buildings and related structures around and associated with these sites. Fence or perimeter treatments beyond 100 feet from a structure as defined above, is prohibited. This product may not be applied directly to food or feed areas.

This product may be applied to reduce rodents to control Norway rats, and rodent nests within or beyond 100 feet of buildings and man-made structures, provided that infestations of these rodents have been confirmed. Bait shall be placed no less than 6 inches inside active Norway/rat nests. Do not broadcast bait. Because Norway/rat nests may be in areas other than 100 feet from buildings and man-made structures when the rodents have ample supplies of food and cover, it is advised to treat the area from beyond 100 feet and be sure the contaminants are easily accessible to rodents.

ENVIRONMENTAL HAZARDS

This product is extremely toxic to mammals and birds. Do not apply to positions that might be exposed to water. Be sure to follow all label instructions for use in areas where wildlife might be present. Keep out of reach of children.

DIRECTIONS FOR USE (Continued from other panel)

SELECTION OF TREATMENT AREAS: Determine areas where rats or mice will most likely first consume the bait. Generally, these areas are along walls, by gnawed openings, in and beside burrows, in corners and concealed places, between rooms and wall, or in locations where rodents of these signs have been seen. Protect bait from rain and snow. Remove as much alternative food as possible.

APPLICATION DIRECTIONS: Rate: Apply 1 to 5 ounces of bait per placement (locally at intervals of 15 to 30 feet). Adjust the amount of bait applied to the level of daily feeding expected at each bait placement. For feeding burrows, use a long-handled spoon to place 1 to 1/4 ounce of bait deep into each active burrow entrance. Clear burrows of soil and 3 to 7 days after bait placement. Repeat burrow entrances that are reopened by rats. If the area where treated burrows are located is accessible to children and non-targeted animals, check burrows every morning and evening to make sure that both have been pulled out of burrow. Remove and properly dispose of any bait that has become inaccessible to children or non-targeted animals.

Gifts, Ap. 4% of toxic bait per placement. Place placements at intervals of 6 to 12 feet in interior areas. Larger placements, up to 3 ounces, may be used at points of exceptionally high activity.

Baiting Strategy: Higher bait consumption is expected to occur on the first day or two after treatment begins. After several days, inspect the placement and replace bait at sites where there is evidence of heavy feeding or where there is continued evidence of rodent activity.

Normally, the volume of bait consumed will be significantly less than before treatments begin. Although one night’s feeding will usually provide a lethal dose, maintain bait for at least one week to provide all rodents a chance to feed on the bait. Continue baiting until all signs of feeding disappear.

FOLLOWUP: Replace contaminated or expired bait immediately. Using waterproof gloves, collect and properly dispose of all dead, exposed animals and excess bait. Proper collection, storage and disposal of all dead, exposed animals and excess bait. Proper collection, storage and disposal of all dead, exposed animals and excess bait.

Hazardous to Humans and Domestic Animals

CAUTION! Harmful if swallowed. Keep away from children, domestic animals and pets. Do not get in eyes, on skin or on clothing.

All containers (including applicators) must be wet before disposal. Disposal of any bait that has become inaccessible to children or non-targeted animals.
