CDB® CLEARON GRANULAR INDUSTRIAL WATER BIOCIDE

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

DANGER

CORROSIVE. CAUSES IRREVERSIBLE EYE DAMAGE
MAY BE FATAL IF INHALED, HARMFUL IF SWALLOWED OR ABSORBED THROUGH SKIN.

Do not get in eyes, on skin, or on clothing. Do not breathe dust, vapor or spray mist. Wear goggles, face shield, or safety glasses. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reuse.

PHYSICAL OR CHEMICAL HAZARDS

STRONG OXIDIZING AGENT: Use only clean dry utensils. Mix only into water. Contamination with moisture, dirt, organic matter or other chemicals (including other pool chemicals) or any other foreign matter may start a chemical reaction with generation of heat, liberation of hazardous gases and possible generation of fire and explosion. Avoid any contact with flammables or burning material such as a lighted cigarette. Do not use this product in any chlorinating device which has been used with any inorganic or unchlorinated chlorinating compounds (e.g., calcium hypochlorite). Such use may cause fire or explosion.

ENVIRONMENTAL HAZARDS: This pesticide is toxic to fish and aquatic organisms.

EMERGENCY HANDLING: In case of contamination or decomposition do not reseal container. If possible, isolate container in open well-ventilated area. Flood with large volumes of water. Dispose of contaminated material in an appropriate manner.

STORAGE AND DISPOSAL: Do not contaminate water, food or feed by alvage or disposal. Store in a dry, cool and well-ventilated area. Avoid moisture getting into container. Keep off wet floors. In case of spillage, wash with large amounts of water. After each use, keep container tightly closed. Cleaning material. Keep away from flames, sparks and all sources of heat. Avoid contact with organic material.

PESTICIDE DISPOSAL: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture or dilute is a violation of Federal law. If these wastes cannot be disposed of by use according to label Instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER HANDLING: Nonrefillable container. Do not refill or relable this container. For recycling, if available. Triple rinse container (or equivalent) promptly after emptying.

Net. Wt. 20 lbs (4 x 5 lbs bottles)

Active Ingredient:
Sodium Dichloro-s-Triazinetrione
99%
Inert Ingredients:
1%
Total:
100%
Available Chlorine:
56.6%

KEEP OUT OF REACH OF CHILDREN

DIRECTIONS FOR USE: It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Read entire label and use strictly in accordance with precautionary statements and directions.

FOR USE IN INDUSTRIAL RECIRCULATING WATER COOLING TOWERS, AIR WASHERS & EVAPORATIVE CONDENSERS:

Treatment with this product is an effective way to control the growth of bacteria and algae in industrial recirculating water cooling towers, air washers and evaporative condensers.

1. Baddy fouled systems should be cleaned prior to initiating treatment. 2. Initial Doseage: When the system is just noticeably fouled, add 10-15 oz. of this product per 10,000 gallons of water contained in the system. Repeat this dosage, if necessary, until five available chlorine level (FAC) of 0.5-1.0 ppm is obtained (as determined by use of a reliable test kit). 3. Maintenance Doseage: To maintain a FAC of 0.5 - 1.0 ppm, add 1-3 oz. of this product per 100,000 gallons of water daily or as needed. 4. This product should be added to the system at a point where adequate flow is maintained. Variations in water temperature, chlorine demand and flow rate will affect the dissolution rate. Warmer seasons may require an upward adjustment of the FAC.

Air Washers: For use only in industrial air washer systems that maintain effective mist eliminating components. Hypochlorite controls flume-feeding bacteria and fungi in air washer systems. This product may be added to the system either continuously or intermittently as needed. The frequency of feeding and duration of the treatment will depend on the severity of the problem. BADLY FOULED SYSTEMS should be cleaned prior to initiating treatment. 1. Initial Doseage: When the system is just noticeably fouled, add 10-15 oz. of this product per 10,000 gallons of water contained in the system. Repeat this dosage, if necessary, until five available chlorine level (FAC) of 0.5-1.0 ppm is obtained (as determined by use of a reliable test kit). 2. Maintenance Doseage: To maintain a FAC of 0.5-1.0 ppm, add 1-3 oz. of this product per 100,000 gallons of water, daily or as needed. 3. This product should be added to the system at a point where adequate flow is maintained. Variations in water temperature, chlorine demand and flow rate will affect the dissolution rate. Warmer seasons may require an upward adjustment of the FAC.

FOR USE ON FOOD CONTACT SURFACES:

This product be used on food contact surfaces in accordance with 21CFR 178.1016 of the Federal Food Drug and Cosmetic Act.

SOLUTION PREPARATION: Prepare a 100 ppm (mg/l) sanitizing solution by thoroughly mixing 1 tablet of this product with 28 gallons of water (0.15 gram per liter). Solution containing an initial concentration of 100 ppm (mg/l) available chlorine must be tested with a suitable chlorine test kit and adjusted periodically to insure the available chlorine level drop below 50 ppm (mg/l) until the discolor solution and add 1 tablet of this product per 50 gallons of water (7.67 milligrams per liter) to increase the available chlorine level 50 ppm (mg/l) and maintain the 100 ppm (mg/l) solution strength.

SANITIZATION OF NON-POUROUS FOOD CONTACT SURFACES:

This product is recommended for use in poultry houses, egg handling equipment, dairy farm milking equipment, household/dormitory dwelling indoor food handling areas, food processing plant premises and equipment (food and non-food contact), meat processing plant premises and equipment (food and non-food contact), poultry processing plant premises and equipment (food and non-food contact), eating establishments, eating establishment equipment utensils (food contact), milk shake machines, soft serve ice cream machines.

RISE OR SPRAY METHOD: Clean equipment surfaces in the normal manner and rinse with potable water. It may be necessary to review glass and hard ear from surfaces by a pre-scrub, pre-flush, and when necessary, a pre-treat, prior to use. To release all surface orthophosphate with the sanitizing solution, maintain contact with the sanitizer for 2 to 5 minutes. Do not rinse equipment with water after treatment. The same solution may be used in food tanks of spray type machines providing at least one minute contact time to sanitize equipment for 2 to 6 minutes and allow five times to drain. Do not rinse equipment with water after treatment.

IMERSION METHOD: Clean equipment in the normal manner. Prior to use, immerse equipment in the sanitizing solution for 2 to 6 minutes and allow five times to drain. Do not rinse equipment with water after treatment.

EGG WASHING:

This product is recommended for use in commercial egg washing treatments and handling eggs washing treatments. The eggs should be washed in a continuous operation and shall be completed as rapidly as possible. The eggs shall not be allowed to stand or soak in water. Immersion-type washers shall not be used. After washing, the eggs shall be spray rinsed with the sanitizing solution. At intervals during use, this product should be added to the circulating spray rinse solution to maintain 100 ppm (mg/l) available chlorine.
