Dicamba Max 4

For weed control in corn, cotton, sorghum, soybean, small grains, pasture, hay, rangeland, general farmstead (non-cropland), fallow, sugarcane, asparagus, turf and grass

ACTIVE INGREDIENT:
Dimethylamine salt of dicamba (3,6-dichloro-o-anisic acid)* ........49.2%
OTHER INGREDIENTS: ..............................................................50.8%
TOTAL: ..................................................................................100.0%

*This product contains 40.0% 3,6-dichloro-o-anisic acid (dicamba) or 4 pounds per gallon (480 g/L).

KEEP OUT OF REACH OF CHILDREN
CAUTION
Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.
(If you do not understand the label, find someone to explain it to you in detail.)

IF SWALLOWED:
• Call a poison control center or doctor immediately for treatment advice.
• Have person sip a glass of water if able to swallow.
• Do not induce vomiting unless told to do so by a poison control center or doctor.
• Do not give anything by mouth to an unconscious person.

IF IN EYES:
• Hold eye open and rinse slowly and gently with water for 15-20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

IF ON SKIN OR CLOTHING:
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for treatment advice.

HOT LINE NUMBER
Have the product container or label with you when calling a poison control center or doctor, or going for treatment.
You may also contact 1-800-222-1222.

See inside booklet for additional Precautionary Statements, and complete Directions for Use.

EPA Reg. No. 83222-14
EPA Est. No. 2217-KS-1

NET CONTENTS: 2.5 GALLONS

Manufactured by:
Direct Ag Source, LLC
30473 260th Street • Eldora, IA 50627

Per your request, here is the proof for Gharda’s label, utilizing the DAS MASTER (#36118-07399) with the Est. No. replaced with PBI Kansas City. No other changes were made. Please advise. Thanks!
NOTE: Per my signature, I have read the information contained on this proof approval form including, but not limited to, copy, rewind direction, color and size. I understand that my signature confirms that the information is my responsibility and is correct and labels will be produced according to this signed document.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
CAUTION
CAUTION: Harmful if swallowed. Causes substantial but temporary eye injury. Do not get in eyes, on skin, or on clothing. Avoid breathing spray mist.

PERSONAL PROTECTIVE EQUIPMENT (PPE)
Some materials that are chemical-resistant to this product are made of any waterproof material. If you want more options, follow the instructions for category A on an EPA chemical-resistance category selection chart:
- All mixers, loaders, applicators and other handlers must wear:
  - Long-sleeved shirt and long pants,
  - Shoes plus socks, and
  - Chemical-resistant gloves (except for applicators using groundboom equipment, pilots, and flaggers).
- See engineering controls for additional requirements.
- Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.
- ENGINEERING CONTROLS STATEMENTS
  - Pilots must use cockpit in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 170.246(d) (4-6)).

USER SAFETY RECOMMENDATIONS
- Users should:
  - Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
  - Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
  - Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS
- Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters or rinsates.
- Apply this product only as directed on label.

DIRECTIONS FOR USE
- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.
**AGRICULTURAL USE REQUIREMENTS**

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:

- Coveralls worn over short-sleeve shirt and short pants
- Chemical-resistant footwear plus socks
- Chemical-resistant gloves made of any waterproof material
- Chemical-resistant headgear for overhead exposure
- Protective eyewear

**NON-AGRICULTURAL USE REQUIREMENTS**

The requirements in this box apply to the uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, in nurseries, in forests, or in greenhouses.

Do not enter or allow others to enter the treated areas until the spray has dried.

Before applying DICAMBA MAX 4, read all directions and precautions appearing on the container label and in this booklet. Failure to follow all directions and precautions may result in unsatisfactory weed control, crop injury, or illegal residues.

**PRODUCT INFORMATION**

The following directions apply to all uses of DICAMBA MAX 4. Additional precautions and restrictions will be found in each specific use section.

Do not treat irrigation ditches or water used for crop irrigation or domestic uses.

Do not apply this product through any type of irrigation system.

Do not exceed the maximum single application rate of 2 pints (1.0 lb. a.i.) DICAMBA MAX 4 per application with no more than 2 applications per year.

**MIXING AND APPLICATION**

UNLESS OTHERWISE SPECIFIED UNDER THE INDIVIDUAL USE HEADINGS OF THIS BOOKLET, THE FOLLOWING DIRECTIONS APPLY TO ALL CROP AND NON-CROP USES OF DICAMBA MAX 4. REFER TO INDIVIDUAL USE SECTIONS FOR ADDITIONAL PRECAUTIONS, RESTRICTIONS, APPLICATION RATES AND TIMINGS.

DICAMBA MAX 4 is a water-soluble formulation that can be applied using water or sprayable fluid fertilizer as the carrier. If a fluid fertilizer is to be used, a compatibility test (See COMPATIBILITY TEST) should be made prior to tank mixing.

Ground or aerial application equipment, which will give good spray coverage of weed foliage, should be used. HOWEVER, DO NOT USE AIRPOLL APPLICATION EQUIPMENT IF SPRAY PARTICLES CAN BE CARRIED BY WIND INTO AREAS WHERE SENSITIVE CROPS OR PLANTS ARE GROWING OR WHEN TEMPERATURE INVERSIONS EXIST.
Apply 3 to 50 gallons of diluted spray per treated acre when using ground application equipment or 1 to 10 gallons of diluted spray per treated acre (2 to 20 gallons of diluted spray per acre for preharvest use) in a water-based carrier when using aerial application equipment. Use the higher level of the listed spray volumes when treating dense or tall vegetation. Use coarse sprays.

Select nozzles designed to produce minimal amounts of fine spray particles. Spray with nozzles as close to the weeds as is practical for good weed coverage.

To avoid uneven spray coverage, DICamba Max 4 should not be applied during periods of gusty wind or when wind is in excess of 15 mph.

Avoid disturbing (e.g., cultivating or mowing) treated areas for at least 7 days following application.

**BEST STEWARDSHIP PRACTICES**

DICamba Max 4 provides effective broadleaf weed and brush control when properly applied. Best stewardship practices in all mixing, loading, and application operations not only maximize weed control, but also protect ground and surface waters and minimize off-target movement.

This chemical is known to leach through the soil into ground water under certain conditions as a result of agricultural use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

**GROUND AND SURFACE WATERS PROTECTION**

1) Point source contamination - To prevent point source contamination, do not mix, load this pesticide product within 50 feet of wells (including abandoned wells and drainage wells), sink holes, perennial or intermittent streams and rivers, and natural or impounded lakes and reservoirs. Do not apply pesticide product within 50 feet of wells. This setback does not apply to properly capped or plugged abandoned wells and does not apply to impervious pad or properly diked mixing/loading areas as described below.

Mixing, loading, rinsing, or washing operations performed within 50 feet of a well are allowed only when conducted on an impervious pad constructed to withstand the weight of the heaviest load that may be on or move across the pad. The pad must be self-contained to prevent surface water flow over or from the pad. The pad capacity must be maintained at 110% that of the largest pesticide container or application equipment used on the pad and have sufficient capacity to contain all product spills, equipment or container leaks, equipment wash waters, and rainwater that may fall on the pad. The containment capacity does not apply to vehicles delivering pesticide shipments to the mixing/loading site. States may have in effect additional requirements regarding wellhead setbacks and operational containment.

Care must be taken when using this product to prevent: a) back siphoning into wells, b) spills or c) improper disposal of excess pesticide, spray mixtures or rinsates. Check valves or anti-siphoning devices must be used on all mixing equipment.

2) Movement by surface runoff or through soil - Do not apply under conditions which favor runoff. Do not apply to impervious substrates such as paved or highly compacted surfaces in areas with high potential for ground water contamination. Ground water contamination may occur in areas where soils are permeable or coarse and ground water is near the surface. Do not apply to soils defined as sand with less than 3% organic matter and where ground water depth is shallow (less than 9 ft) and 10 ft). To minimize the possibility of ground water contamination, carefully follow application rate recommendations as affected by soil type in the Product Information section of this label.

3) Movement by water erosion of treated soil - Do not apply or incorporate this product through any type of irrigation equipment nor by flood or furrow irrigation. Ensure treated areas have received at least one-half inch rainfall (or irrigation) before using tailwater for subsequent irrigation of other fields.
SENSITIVE CROP PRECAUTIONS

DICAMBA MAX 4 may cause injury to desirable trees and plants, particularly beans, cotton, flowers, fruit trees, grapes, ornamentals, peas, potatoes, soybeans, sunflowers, tobacco, tomatoes, and other broadleaf plants when contacting their roots, stems or foliage. These plants are most sensitive to DICAMBA MAX 4 during their development or growing stage. FOLLOW THE PRECAUTIONS LISTED BELOW WHEN USING DICAMBA MAX 4.

- Do not treat areas where either possible downward movement into the soil or surface washing may cause contact of DICAMBA MAX 4 with the roots of desirable plants such as trees and shrubs.
- Avoid making applications when air currents may carry spray particles to areas where sensitive crops and plants are growing, or when temperature inversions exist. Do not spray near sensitive plants if wind is gusty or in excess of 5 mph and moving in the direction of adjacent sensitive crops. Leave an adequate buffer zone between area to be treated and sensitive plants. Coarse sprays are less likely to drift out of the target area than fine sprays.
- Use coarse sprays to avoid potential herbicide drift. Select nozzles, which are designed to produce minimal amounts of fine spray particles. Examples of nozzles designed to produce coarse sprays via ground application are Delavan Raindrops, Spraying Systems XR flat fans, or large capacity flood nozzles such as D10, TK10, or greater capacity tips. Keep the spray pressure at or below 20 psi and the spray volume at or above 20 GPA, unless otherwise required by the manufacturer of drift-reducing nozzles. Consult your spray nozzle supplier concerning the choice of drift-reducing nozzles.
- Agriculturally approved drift-reducing additives may be used.
- Do not apply DICAMBA MAX 4 adjacent to sensitive crops when the temperature on the day of application is expected to exceed 85°F as drift is more likely to occur.
- To avoid injury to desirable plants, equipment used to apply DICAMBA MAX 4 should be thoroughly cleaned (See PROCEDURE FOR CLEANING SPRAY EQUIPMENT) before reusing to apply any other chemicals.

All crops use of DICAMBA MAX 4 are intended for a normal growing interval between planting and harvest. No crop rotation restrictions exist if normal harvest of treated crops has occurred. If this interval is shortened, such as in cover crops that will be plowed under, do not follow up with the planting of a sensitive crop. Crops growing under stress conditions such as drought, poor fertility, or foliar damage due to hail, wind or insects, can exhibit various injury symptoms that may be more pronounced if herbicides are applied.

Consult your local or state authorities for possible application restrictions and advice concerning these and other special local use situations. Tank mix recommendations are for use only in states where the tank mix product and application site are registered.

BAND TREATMENTS

DICAMBA MAX 4 may be applied as a band treatment. Use the formulas below to determine the appropriate rate and volume per treated acre.

\[
\text{Band width in inches} \times \text{Broadcast RATE} = \text{Band RATE per treated acre}
\]

\[
\text{Row width in inches} \times \text{Broadcast VOLUME} = \text{Band VOLUME per treated acre}
\]

Compatibility Test

Before mixing in the spray tank, it is advisable to test compatibility by mixing all components in a small container in proportionate quantities (see following table).

Amount of Herbicide to Add to One Pint of Spray Carrier (Assuming Volume is 25 Gallons per Acre)
If herbicide(s) do not ball-up or form flakes, sludge, gels, oily films or layers, or other precipitates, then the tested spray mix is compatible. Usually, incompatibility in any of the above-described forms will occur with 5 minutes after mixing.

If components are incompatible, the use of a compatibility agent is recommended. Run the above COMPATIBILITY TEST with a suitable compatibility agent (1/4 teaspoon is equivalent to 2 pints per 100 gallons of fluid fertilizer).

PROCEDURE FOR CLEANING SPRAY EQUIPMENT

The steps listed below are suggested for thorough cleaning of spray equipment following applications of DICAMBA MAX 4 or tank mixes of DICAMBA MAX 4 or tank mixes of DICAMBA MAX 4 plus 2,4-D amine.

1) Hose down thoroughly the inside as well as outside surfaces of equipment while filling the spray tank half full of water. Flush by operating sprayer until the system is purged of the rinse water.
2) Fill tank with water while adding 1 quart of household ammonia for every 25 gallons of water. Operate the pump to circulate the ammonia solution through the sprayer system for 15 to 20 minutes and discharge a small amount of the ammonia solution through the boom and nozzles. Let the solution stand for several hours, preferably overnight.
3) Flush the solution out of the spray tank through the boom.
4) Remove the nozzles and screens and flush the system with two full tanks of water.

The steps listed below are suggested for thorough cleaning of spray equipment used to apply DICAMBA MAX 4 as a tank mix with wettable powders (WP), emulsifiable concentrates (EC), or other types of water-dispersible formulations, DICAMBA MAX 4 tank mixes with water-dispersible formulations require the use of a water/detergent rinse.

5) Complete step 1.
6) Fill tank with water while adding 2 lbs. of detergent for every 40 gallons of water. Operate the pump to circulate the detergent solution through the sprayer system for 5 to 10 minutes and discharge a small amount of the solution through the boom and nozzles. Let the solution stand for several hours, preferably overnight.
7) Flush the detergent solution out of the spray tank through the boom.
8) Repeat step 1, and follow with steps 2, 3 and 4.

GENERAL WEED LIST

This is a general list of weeds which may be treated with DICAMBA MAX 4 in accordance with this label as recommended under the rates and timing sections of the Individual Use headings. Proper usage of this product will give control or growth suppression of many ANNUAL, BIENNIAL, and PERENNIAL broadleaf weeds, and many WOODY brush and vine species including:
FIELD, SEED*, POPCORN* AND SILAGE CORN

Observe all precautions, mixing, and application instructions as well as the following:

* Do not apply DICAMBA MAX 4 to seed corn or popcorn without first verifying with your local seed corn company (supplier) the dicamba selectivity on your inbred line or variety of popcorn. This precaution will help avoid potential injury of sensitive varieties.

DICAMBA MAX 4 is not registered for use on sweet corn.

Direct contact of DICAMBA MAX 4 with corn seed must be avoided. If corn seeds are less than 1 1/2 inches below the surface, delay application until corn has emerged.

Up to 2 applications of DICAMBA MAX 4 may be made during a growing season. Do not exceed a total of 1 1/2 pints of DICAMBA MAX 4 per treated acre per crop year. Allow two weeks or more between applications of DICAMBA MAX 4. See appropriate section for rate information. For combination options or sequential treatments, refer to appropriate section.

Applications of DICAMBA MAX 4 to corn during periods of rapid growth may result in temporary leaning. Corn will usually be erect within 3 to 7 days. Cultivation should be delayed until after corn is growing normally so as to avoid breakage.

Agriculturally approved surfactants or sprayable fertilizers (1/2 to 1 gallon per acre of 28%, 30% or 32% urea ammonium nitrate or 2.5 pounds per acre spray grade ammonium sulfate) may be added to the spray mixture to improve postemergence weed control, particularly in dry growing conditions.

Do not use adjuvants containing penetrants such as petroleum-based oils after crop emergence or crop injury may result. Corn may be harvested or grazed for feed once the crop has reached the ensilage (milk) stage or later in maturity.

Several synthetic pyrethroid insecticides are labeled for tank mix applications of dicamba. Refer to their label for specific recommendations.

WEEDS CONTROLLED

DICAMBA MAX 4 will control many ANNUAL broadleaf weeds or give growth suppression of many PERENNIAL broadleaf weeds commonly found in corn. (Refer to the GENERAL WEED LIST.)

For best performance, make application when weeds have emerged and are actively growing.

Preemergence control of cocklebur, velvetleaf, and imi-resistant weeds may be reduced if conditions such as low temperature or lack of soil moisture cause delayed or deep germination of weeds.
Preplant/Preemergence in No-Tillage Corn

Applications of Dicamba MAX 4® may be made before, during, or after planting to emerged and actively growing broadleaf weeds. Apply DICAMBA MAX 4® at 1 pint per treated acre on medium or fine textured soils containing 2% or greater organic matter. Use 1/2 pint per treated acre on coarse textured soils (sand, sandy loam, and loamy sand) or medium and fine textured soils with less than 2% organic matter.

When planting into a legume sod (e.g., alfalfa or clover), apply DICAMBA MAX 4® after 4 to 6 inches of regrowth has occurred.

Preemergence in Conventional or Reduced Tillage Corn

DICAMBA MAX 4® may be applied after planting and prior to corn emergence. Application at 1 pint per treated acre may be made to medium or fine textured soils, which contain 2% or greater organic matter. DO NOT apply to coarse textured soils (sand, sandy loam, and loamy sand) until after crop emergence (see Early Postemergence uses below).

Preemergence application of DICAMBA MAX 4® does not require mechanical incorporation to become active. A shallow mechanical incorporation is recommended if application is not followed by adequate rainfall or sprinkler irrigation. Avoid tillage equipment (e.g., drags, harrows) which concentrates treated soil over seed furrow.

Early Postemergence (All Tillage Systems)
(Spike through 8-inch tall corn)

DICAMBA MAX 4® at 1 pint per treated acre may be applied during the period from corn emergence through the five-leaf stage of 8-inch tall corn, whichever comes first. Reduce the rate to 1/2 pint per treated acre if corn is growing on coarse textured soils (sand, sandy loam, and loamy sand). See Late Postemergence Applications given below if the 8th true leaf is emerging from vining or corn is greater than 8 inches tall.

Late Postemergence (All Tillage Systems)
(8 to 16 inch tall corn)

Application of DICAMBA MAX 4® at 1/2 pint per treated acre may be made from 8 to 16 inch tall corn or 15 days before tassel emergence, whichever comes first. For best performance, make applications when weeds are less than 3 inches tall.

Make directed spray application when (1) corn leaves prevent proper spray coverage; (2) sensitive crops are growing nearby; (3) tank mixing with 2,4-D.

DO NOT apply DICAMBA MAX 4® when soybeans are growing nearby if any of these conditions exist:
- corn is more than 24 inches tall
- soybeans are more than 10 inches tall
- soybeans have begun to bloom

Overlay (Sequential/Treatment)

DICAMBA MAX 4® may be applied to ground previously treated with one or more of the following herbicides registered for use in corn:

- acetochlor
- alachlor (Lasso®, Lasso MT®)
- atrazine
- Broadstrike®
- butylate (Sutan®)
- dimethenamid (Frontier®)
- EPTC
- glyphosate
- halosulfuron (Battlion®, Permit®, Lariat®)
- metolachlor
- parquat
- pendimethalin
- propachlor (Flamer®)
- simazine

Apply DICAMBA MAX 4® at 1/2 pint per treated acre to ground previously treated with full rates of Clarity® or Marksman® herbicides. Allow at least 2 weeks between applications.

Read and follow label directions for each of the above products.
TANK MIX TREATMENTS FOR CORN
DICAMBA MAX 4 may be tank mixed with one or more of the following herbicides for control of grasses or additional broadleaf weeds. Read and follow the label of each tank mix product used for precautionary statements, directions for use, rates and timings, and other restrictions.

COTTON
EXCEPT CALIFORNIA

PREPLANT APPLICATION: Apply up to 8 fluid ounces of DICAMBA MAX 4 per acre to control emerged broadleaf weeds prior to planting cotton in conventional or conservation tillage systems.

For best performance, apply DICAMBA MAX 4 when weeds are in the 2 - 4 leaf stage and rosettes are less than 2" across.

Following application of DICAMBA MAX 4 and a minimum accumulation of 1" of rainfall or overhead irrigation, a waiting interval of 21 days is required per 8 fluid ounces per acre or less. These intervals must be observed prior to planting cotton.

Do not apply preplant to cotton west of the Rockies.

Do not make DICAMBA MAX 4 preplant applications to geographic areas with average annual rainfall less than 25".

If applying a spring preplant treatment following application of a fall preplant (postharvest) treatment, then the combination of both treatments may not exceed 2 pounds acid equivalent per acre.

COTTON TANK MIXES

For control of grasses or additional broadleaf weeds, DICAMBA MAX 4 may be tank mixed with prometryn, parquat, and glyphosate herbicides.

SORGHUM (MILO)

Observe all precautions, including the reference to crops growing under stress.

Read and follow mixing and application instructions.

Applications of DICAMBA MAX 4 to sorghum during periods of rapid growth may result in temporary leaning of plants or rolling of leaves. These effects are usually outgrown within 10 to 14 days.

Restrictions:

- Pre-Harvest Interval (PHI):
  - Grain sorghum (PHI): 30 days
  - Forage (PHI): 20 days

- Fodder (PHI): 30 days

• Do not graze or feed treated sorghum forage or silage prior to mature grain stage. If sorghum is grown for pasture or hay, refer to the pasture use section of this label.
• Do not apply DICAMBA MAX 4 to sorghum grown for seed production.
• Make no more than one application per growing season.

WEEDS CONTROLLED
DICAMBA MAX 4, when applied at the specified rate for sorghum, will control many actively growing ANNUAL broadleaf weeds and will reduce competition from established PERENNIAL broadleaf weeds as well as control their seedlings. (Refer to GENERAL WEED LIST).

RATES AND TIMINGS
DICAMBA MAX 4 may be applied to emerged and actively growing weeds at least 15 days prior to planting. Postemergence application of DICAMBA MAX 4 must be made after sorghum is in the spike stage (all sorghum emerged) but before sorghum is 15 inches tall. For best performance, make applications when sorghum is in the 3 to 5 leaf stage and weeds are small (less than 3 inches tall). Use drop pipes (drop nozzles) if sorghum is taller than 8 inches. Keeping the spray off the sorghum leaves and out of the wind will reduce the likelihood of crop injury and improve spray coverage of weed foliage.

Broadcast rate per treated acre: 1/2 pint (1/4 lb. a.i.)

TANK MIX TREATMENTS
DICAMBA MAX 4 plus Atrazine:
For improved control of emerged, actively growing broadleaf weeds including triazine resistant species and added suppression of perennial broadleaf weeds, tank mix 1/2 pint DICAMBA MAX 4 with 0.5 to 1.25 lbs. a.i. atrazine per treated acre. For control of grasses (less than 1.5 inches tall), tank mix 1/2 pint DICAMBA MAX 4 with 2 lbs. a.i. atrazine per treated acre. For best performance and minimal crop injury, make application when sorghum is 3-8 inches tall and when broadleaf weeds are small (less than 6 inches tall). Application of atrazine must be made before sorghum is beyond 12 inches tall. The atrazine rate will depend upon soil texture and length of residual weed control desired. Follow all state and Federal restrictions pertaining to atrazine applications.

DICAMBA MAX 4 plus bromoxynil:
For improved control of broadleaf weeds, tank mix 1/2 pint DICAMBA MAX 4 with 1 - 1.5 1/2 pint bromoxynil herbicide per treated acre. Make application at 4 leaf to 15-inch tall sorghum. Use drop nozzles to direct spray beneath sorghum leaves when sorghum is greater than 8 inches tall.

READ AND FOLLOW THE LABEL OF EACH TANK MIX PRODUCT USED FOR PRECAUTIONARY STATEMENTS, DIRECTIONS FOR USE, APPLICATION RATES AND TIMINGS, AND OTHER RESTRICTIONS.

OVERLAY (SEQUENTIAL)TREATMENTS
DICAMBA MAX 4 may be applied to ground previously treated with one or more of the following herbicides:

<table>
<thead>
<tr>
<th>Herbicide</th>
<th>Maximum Rate Per Treated Acre (lbs. a.i.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>aclon  (Lasso™)</td>

<td>2.5</td>
</tr>
</tbody>
</table>

† Maximum use rate for atrazine is determined by soil type, tillage practices used, surface residue, and state or local restrictions. Follow the more restrictive requirements when determining the maximum use rate for atrazine.

PREHARVEST USES
FOR USE ONLY IN THE STATES OF TEXAS AND OKLAHOMA
DICAMBA MAX 4 may be applied for weed suppression any time after the sorghum has reached the soft dough stage. An agriculturally approved surfactant may be used to improve performance. For aerial applications use at least 2 gallons of water-based carrier per treated acre.

Artist  Proofer

Job Number 46575_07538

Color proofs are not true representations of color. Use for color breaks only.
Delay harvest until 30 days after treatment.

Broadcast rate per treated acre: 1/2 pint (1/4 lb. a.i.)

SMALL GRAINS (WHEAT, BARLEY AND OATS) NOT UNDERSEEDED TO LEGUMES

IMPORTANT

Observe all precautions. Read and follow cleaning, mixing and application instructions.

Restrictions:
- Pre-harvest interval (PHI) – 7 days
- If small grains are used for pasture or hay, the following restrictions apply:
  Animals cannot be removed from treated area for slaughter prior to 30 days after last application.
  There is no waiting period between treatment and grazing for non-lactating dairy animals.
  Treated areas may not be grazed by lactating dairy animals before 7 days after treatment.

Do not harvest hay from treated areas before 37 days after treatment.

NOTE: Observe all precautions and restrictions on the labels of products used in tank mix treatments.

WEEDS CONTROLLED

DICAMBA MAX 4 or combinations with listed tank mix partners will provide control or suppression of the annual broadleaf weeds listed below. For improved control of listed weeds, it is recommended that DICAMBA MAX 4 be applied in a tank mix with other herbicides. Refer to specific crop for tank mix options.

- Weeds

1 These weeds will be controlled with DICAMBA MAX 4 tank mixes. Refer to tank mix label for specific weeds controlled.
2 DICAMBA MAX 4 tank mixes will provide suppression of established broadleaf weeds and control their seedlings.
RATES AND TIMINGS
Application of DICAMBA MAX 4 may be made before, during or after planting small grains. For best performance, make applications when weeds are in the 2-3 leaf stage and rosettes are less than 2 inches across. Application of DICAMBA MAX 4 to small grains during periods of rapid growth may result in crop leaning. This condition is temporary and will not reduce crop yields.

Use DICAMBA MAX 4 at 2 to 4 fluid ounces per treated acre in wheat, fall seeded barley, and oats, and at 2 to 3 fluid ounces per treated acre in spring seeded barley. Use the higher level of listed rate ranges when treating difficult to control weeds such as Kochia, wild buckwheat, cow cockle, prostrate knotweed, Russian thistle, and prickly lettuce or when dense vegetative growth occurs.

DICAMBA MAX 4 used in a tank mix with other herbicides offers the best spectrum of weed control and herbicide tolerant or resistant weed management. Refer to specific crop for DICAMBA MAX 4 rate and application timing. For applications prior to the emergence of weeds or when sulfonylurea resistant weeds are present or suspected, use a minimum of 3 fluid ounces per treated acre of DICAMBA MAX 4 with a tank mix herbicide. Non-sulfonylurea herbicides such as 2,4-D or MCPA tank mixed with DICAMBA MAX 4 will offer more consistent control of sulfonylurea resistant weeds.

When tank mixing with sulfonylurea herbicides, such as Ally*, Amber*, Express*, Glen* and Harmony* Extra, use an agriculturally approved surfactant of at least 80% active ingredient at the rate of 1-4 pts/100 gallons of spray or not more than 0.25-0.65% by volume. Use the highest rate of surfactant when using the lower rate ranges of the tank mix and/or when treating more mature and difficult to control weeds or dense vegetative growth.

FALL AND SPRING SEeded WHEAT
DICAMBA MAX 4 MUST BE APPLIED TO FALL SEEDED WHEAT PRIOR TO THE JOINTING STAGE. APPLICATIONS TO SPRING SEEDED WHEAT MUST BE MADE BEFORE WHEAT REACHES THE 6 LEAF STAGE.

NOTE: Early developing wheat varieties such as TAM 107, MADISON, or WAVERFIELD must receive application between early tillering and the jointing stage. Care should be taken in staging these varieties to be certain that the application occurs prior to the jointing stage.

TANK MIX TREATMENTS
DICAMBA MAX 4 may be tank mixed with one or more of the following herbicides. Read and follow the label of each tank mix product used for precautionary statements, directions for use, weed controlled, geographic and other restrictions.

* DICAMBA MAX 4 may be used at 6 fluid ounces on fall seeded wheat in Western Oregon as a spring application only. In CO, KS, NM, OK and TX up to 8 fluid ounces of DICAMBA MAX 4 may be applied on fall seeded wheat after it exceeds the 3 leaf stage for suppression of perennial weeds, such as field bindweed. Applications may be made in the fall following a frost but before a killing freeze. DICAMBA MAX 4 may be tank mixed with 2,4-D amine at 8

---

**NOTE:** Per my signature, I have read the information contained on this proof approval form including, but not limited to, copy, rewind direction, color and size. I understand that my signature confirms that the information is my responsibility and is correct and labels will be produced according to this signed document.
DICAMBA MAX 4 MUST BE APPLIED TO FALL SEEDED BARLEY PRIOR TO THE JOINTING STAGE.

NOTE: For spring barley varieties that are seeded during the winter months or later, follow the rates and timings given for Spring Seeded Barley.

TANK MIX TREATMENTS
DICAMBA MAX 4 may be tank mixed with one or more, but not limited to, the following herbicides. Read and follow the label of each tank mix product used for precautionary statements, directions for use, weeds controlled and geographic and other restrictions.

Broadcast rate per treated acre: Apply 2.4 fluid ounces DICAMBA MAX 4 with:

<table>

</tbody>
</table>

1 When using formulations other than 4 lb/gal use pounds active/acre listed.

FALL AND SPRING SEEDED TRITICALE
EXCEPT CALIFORNIA

EARLY SEASON APPLICATIONS
Apply 2.4 fluid ounces of DICAMBA MAX 4 to triticale.
Early season applications to fall-seeded triticale must be made prior to jointing stage.
Early season applications to spring-seeded triticale must be made before triticale reaches the 6-leaf stage.

TANK MIXES
For best performance, should be used in tank mix combination with bromoxynil.
SUGARCANE

Observe all precautions. Read and follow mixing and application instructions. Consult your local or state authorities for possible application restrictions, especially concerning aerial applications and advice concerning special local use situations.

WEEDS CONTROLLED

DICamba MAX 4, when applied at specified rates, will control many ANNUAL, BIENNIAL and PERENNIAL broadleaf weeds commonly found in sugarcane. (Refer to GENERAL WEED LIST).

RATES AND TIMINGS

Application of DICamba MAX 4 may be made any time after weeds have emerged and are actively growing but before the close-in stage of sugarcane. Application rates and timing of DICamba MAX 4 are given below. Use the higher level of listed rates when treating dense vegetative growth.

NOTE: Retreatments may be made as needed; however, do not exceed a total of 2 pints (1 lb. a.i.) of DICamba MAX 4 per treatment with a maximum of 2 treatments per year.

<table>
<thead>
<tr>
<th>Weed Stage &amp; Type</th>
<th>Amount of Formulated DICamba MAX 4 DMA (pints)</th>
<th>Equivalent Lbs. a.i. Pre-harvest Interval (PHI)</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>Biennial</td>
<td>1-2</td>
<td>1/2-1</td>
</tr>
<tr>
<td>Perennial</td>
<td>2-4</td>
<td>1-2</td>
</tr>
</tbody>
</table>

¹ For application rates above 2 pints (1 lb. a.i.) DICamba MAX 4 per treated acre, apply a maximum of 2 pints (1.0 lb. a.i.) of DICamba MAX 4 per treated acre per application with a maximum of 2 applications per year.

² Application made over the top of actively growing sugarcane may result in crop injury.

When possible, direct the spray beneath the sugarcane canopy in order to minimize the likelihood of crop injury. The use of directed sprays will also aid in maximizing spray coverage of weed foliage.

TANK MIX TREATMENTS

DICamba MAX 4 may be tank mixed with one or more of the following herbicides for control of grasses or additional broadleaf weeds. Read and follow the label of each tank mix product used for precautionary statements, directions for use, rates and timings, weeds controlled, geographic and other restrictions.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

*Application of DICamba MAX 4 plus 2,4-D tank mix at the higher listed rate ranges may result in crop injury.

PASTURE, HAY, RANGELAND, AND GENERAL FARMSTEAD (NON-CROPLAND)

DICamba MAX 4 is recommended for use for pasture, hay, rangeland, general farmstead (non-cropland) (including fence rows and non-irrigation ditches/ponds) for broadleaf weed and brush control. DICamba MAX 4 may also be applied to non-cropland areas for the control of broadleaf weeds in Noxious Weed Control Programs, Districts or Areas including broadcast or spot treatment of roadsides and highways, utilities, railroad and pipeline rights-of-way. Noxious weeds must be recognized at the state level but programs may be administered at state, county or other level.
Observe all precautions. Read and follow mixing and application instructions.

DICAMBA MAX 4 uses described in this section also pertain to small grains (such as barley, forage sorghum, oats, rye, sudangrass or wheat) grown for pasture use only.

NEWLY SEEDED AREAS, including small grains grown for pasture may be severely injured if rates of DICAMBA MAX 4 greater than 1 pint/A are applied.

ESTABLISHED GRASS CROPS growing under stress can exhibit various injury symptoms that may be more pronounced if herbicides are applied.

Bentgrass, carpetgrass, buffalograss and St. Augustine grass may be injured at rates exceeding 1 pint DICAMBA MAX 4 (1 lb a.i.) per treated acre. Usually colonial bentgrasses are more tolerant than creeping types. Velveteen grasses are most easily injured. Treatments will kill or injure alfalfa, clovers, lespedeza, wild winter peas, vetch and other legumes.

ANIMALS CANNOT BE REMOVED FROM TREATED AREA FOR SLAUGHTER PRIOR TO 30 DAYS AFTER LAST APPLICATION.

THERE IS NO WAITING PERIOD BETWEEN TREATMENT AND GRAZING FOR NON-LACTATING ANIMALS.

TIMING RESTRICTIONS FOR LACTATING DAIRY ANIMALS FOLLOWING TREATMENT:

<table>
<thead>
<tr>

</tr>
<tr>
<td></td>
<td>Up to 4 pints (2 lb, a.i.)</td>
<td>40 days</td>
<td>70 days</td>
</tr>
</tbody>
</table>

* The maximum rate per treated acre per year of DICAMBA MAX 4 is 4 pints (2 lb, a.i.). For application rates above 2 pints (1 lb, a.i.) DICAMBA MAX 4 per treated acre, apply a maximum of 2 pints (1.0 lb, a.i.) of DICAMBA MAX 4 per treated acre per application with a maximum of 2 applications per year.

NOTE: Observe all precautions and restrictions on labels of products used in tank mixtures.

MIXING AND APPLICATION

DICAMBA MAX 4 can be applied using water, oil in water emulsions including invert systems, or sprayable fluid fertilizer as a carrier. A COMPATIBILITY TEST (see COMPATIBILITY TEST section) should be made prior to tank mixing.

To prepare oil in water emulsions, half-fill spray tank with water, then add appropriate amount of emulsifier. With continuous agitation, slowly add the herbicide and then the oil (such as diesel oil) or fuel oil or a premix of oil plus additional emulsifier to spray tank. Complete filling of spray tank with water. Maintain vigorous agitation during spray operation to prevent oil and water from forming separate layers.

DICAMBA MAX 4 may be applied broadcast using either ground or aerial application equipment. When using ground equipment, apply 3 to 500 gallons of diluted spray per treated acre. Volume of spray applied will depend on the height, density, and type of weeds or brush being treated and on the type of equipment being used. When using aerial equipment apply 2 to 40 gallons of diluted spray per treated acre in a water-based carrier.

DICAMBA MAX 4 may be applied to individual clumps or small areas (SPOT TREATMENT) of undesirable vegetation using handgun or similar types of application equipment. Apply diluted sprays to allow complete wetting (up to run off) of foliage and stems.

Herbicide adjuvants or other spray additives (emulsifiers, surfactants, wetting agents, drift control agents, or penetrants) may be used for wetting, penetration, or drift control. Spray additives must be agriculturally approved when used in pasture applications. If spray additives are used, read and follow all use recommendations and precautions on product label.
WEEDS CONTROLLED
DICamba MAX 4, when applied at specified rates, will give control many ANNUAL, BIENNIAL, and PERENNIAL broadleaf weeds, and many WOODY brush and vine species commonly found in pasture, hay, rangeland, and general farmstead (non-cropland) areas. (Refer to GENERAL WEED LIST). Note: (*) PERENNIAL weeds may be controlled with lower rates of either DICamba MAX 4 or DICamba MAX 4 plus 2,4-D, See the following RATES AND TIMINGS section.

RATES AND TIMINGS
Application rates and timing of DICamba MAX 4 are given below. Use the higher level of listed rates when treating dense or tall vegetative growth.

NOTE: Retreatments may be made as needed; however, do not exceed a total of 2 pints (1 lb. a.i.) of DICamba MAX 4 per acre per treatment with a maximum of 2 treatments per year.

^1 For best performance, make application when BIENNIAL WEEDS are in the Rosette Stage.
^2 Species noted in GENERAL WEED LIST section will require tank mixtures for adequate control.
^3 For application rates above 2 pints (1 lb. a.i.) DICamba MAX 4 per treated acre, apply a maximum of 2 pints (1.0 lbs. a.i.) of DICamba MAX 4 per treated acre per application with a maximum of 2 applications per year.

TANK MIX TREATMENTS
READ AND FOLLOW THE LABEL OF EACH TANK MIX PRODUCT USED FOR PRECAUTIONARY STATEMENTS, DIRECTIONS FOR USE, APPLICATION RATES AND OTHER RESTRICTIONS.

DICamba MAX 4 may be tank mixed with one or more of the following herbicides for control of grasses, additional broadleaf weeds, and woody brush and vines.

<table>
<thead>

Due to the variations that may occur in formulated products and specific use ingredients (e.g., water supplies), a Compatibility Test is recommended prior to actual tank mixing.

CUT SURFACE TREE TREATMENTS

DICAMBA MAX 4 may be applied as a cut surface treatment for control of unwanted trees and prevention of sprouts of cut trees. A mix of 1 part DICAMBA MAX 4 with 1 to 3 parts water should be used in application. Use the lower dilution when treating difficult-to-control species.

FRILL OR GIROLE TREATMENTS: Make a continuous cut or a series of overlapping cuts using an ax or girdle tree trunk. Spray or paint cut surface with the DICAMBA MAX 4-water mix. The area adjacent to the bark should be thoroughly wet.

Note: For more rapid foliage effects, 2,4-D may be added to the DICAMBA MAX 4-water mix.

DORMANT APPLICATIONS FOR CONTROL OF MULTIFLORA ROSE

DICAMBA MAX 4 can be applied when plants are dormant as an undiluted SPOT-CONCENTRATE directly to the soil or as a LO-OL, BASIL BARK treatment using an oil-water emulsion solution.

SPOT-CONCENTRATE applications of DICAMBA MAX 4 should be applied directly to the soil as close as possible to the root zone but within 6-8 inches of the crown. On sloping terrain, application should be made to the uphill side of the crown. Do not make application when snow or water prevents applying DICAMBA MAX 4 directly to the soil. The use rate of DICAMBA MAX 4 is dependent on the canopy diameter of the multiflora rose. Examples:

- Use DICAMBA MAX 4 at 1/4, 1 or 2 1/4 fluid ounces of product, respectively, for 5, 10 or 15 feet canopy diameters.
- Do not exceed a total of 4 quarts DICAMBA MAX 4 per acre per year.

LO-OL BASAL BARK applications of DICAMBA MAX 4 should be applied to the basal stem region from the ground line up to a height of 12 to 18 inches. Spray until runoff, with special emphasis on covering the root crown. For best results, make application when plants are dormant. Do not make application after bud break or when plants are showing signs of active growth. Do not make application when snow or water prevents applying DICAMBA MAX 4 to the ground line. Refer to Mixing and Applications above in this section for method of preparing oil-in-water emulsion. Example: for making approximately 2 gallons of a LO-OL spray solution mixture: combine 1 1/2 gallons water plus 1 ounce emulsifier plus 1 pint DICAMBA MAX 4 plus 2 1/2 pints of No. 2 diesel fuel. Adjust amounts of materials used proportionately to the amount of final spray solution desired. Do not exceed 8 gallons of spray solution mix applied per acre per year.

CONSERVATION RESERVE PROGRAM (CRP) ACRES

DICAMBA MAX 4 can be used on both newly seeded and established grasses grown in Conservation Reserve or Federal Set-Aside Programs. For program lands, such as Conservation Reserve Program, consult program rules to determine whether grass or hay may be used. The more restrictive requirements of the program rules or this label must be followed.

Observe all precaution, mixing and application directions.

DICAMBA MAX 4 treatment will injure or may kill alfalfa, clovers, lespedea, wild winter peas, vetch, and other legumes.

Agriculturally approved surfactants may be added to the spray mixture to improve postemergence weed control, particularly in dry growing conditions.

Do not use adjuvants containing penetrants such as petroleum based oils after grass emergence on newly seeded grasses.

NEWLY SEEDED AREAS

DICAMBA MAX 4 may be applied either preplant or postemergence to newly seeded grasses or small grains such
as barley, oats, rye, sudangrass, wheat, or other grain species grown as a cover crop. Postemergence applications may be made after seeding grasses exceed the 3-leaf stage. Rates of DICamba MAX 4 greater than 1 pint per treated acre may severely injure newly seeded grasses. Preplant applications – injury to new seedlings may occur if intervals between application and grass planting is less than 45 days per pint of DICamba MAX 4 per treated acre. West of the Mississippi River or 20 days per pint East of the Mississippi River.

ESTABLISHED GRASS STANDS

Established grass stands are perennial grasses planted one or more seasons prior to treatment. Certain species: bentgrass, carpetgrass, smooth brome, buffalograss or St. Augustine grass may be injured when treated with DICamba MAX 4 at rates exceeding 1 pint per treated acre.

WEEDS CONTROLLED

DICamba MAX 4, when applied at specified rates, will control many annual and biennial weeds and provide control or suppression of many perennial weeds. (Refer to GENERAL WEED LIST).

RATES AND TIMINGS

Application rates and timing of DICamba MAX 4 treatment are given below. Use the higher rate of the rate range when vegetation is either dense or tall, or when weeds are growing under stressed conditions such as drought or cool temperature.

NOTE: Retreatments may be made as needed; however, do not exceed a total of 4 pints (2 lbs, a.i.) of DICamba MAX 4 per treated acre during a growing season applied at a rate of 2 pints (1 lb, a.i.) DICamba MAX 4 per treatment.

<td>2-4’</td>
</tr>
</tbody>
</table>

1 For best results, treat Biennial weeds with DICamba MAX 4 when they are in the rosette growth stage.
2 Biennial and Perennial weeds will require follow-up (sequential) treatments for seedling control and escapes.
3 For application rates above 2 pints (1 lb, a.i.) DICamba MAX 4 per treated acre, apply a maximum of 2 pints (1.0 lb, a.i.) of DICamba MAX 4 per treated acre per application with a maximum of 2 applications per year.

TANK MIX TREATMENTS

To control grasses and additional broadleaf weeds, DICamba MAX 4 may be tank mixed with other herbicides registered for use in Conservation Reserve Programs such as 2,4-D, glyphosate, parquat, metribuzin, and others.

READ AND FOLLOW THE LABEL OF EACH TANK MIX PRODUCT USED FOR PRECAUTIONARY STATEMENTS, DIRECTIONS FOR USE, APPLICATION RATES, AND OTHER RESTRICTIONS.

ASPARAGUS

FOR USE ONLY IN THE STATES OF CALIFORNIA, OREGON, AND WASHINGTON

Observe all precautions. Read and follow mixing and application instructions.
NOTE: Per my signature, I have read the information contained on this proof approval form including, but not limited to, copy, rewind direction, color and size. I understand that my signature confirms that the information is my responsibility and is correct and labels will be produced according to this signed document.

NOTE:
- If spray contacts emerged spears, crooking (twisting) of some spears may result. If such crooking occurs, discard affected spears.
- Do not plant prior to 24 hours after treatment.
- Do not use in the Coachella Valley of California.
- Multiple applications may be made per growing season; however, DO NOT EXCEED a total of 1 pint (1/2 lb. a.i.) of DICAMBA MAX 4 per treated acre per crop year.

RATES AND TIMINGS
Apply DICAMBA MAX 4 to emerged and actively growing weeds in 40 to 60 gallons of diluted spray per treated acre immediately after cutting the field, but at least 24 hours before the next cutting.

DICAMBA MAX 4 may be applied in a tank mixture with either 2,4-D or glyphosate herbicide for improved control of noted (*) weeds. READ AND FOLLOW 2,4-D OR GLYPHOSATE PRODUCT LABELING FOR PRECAUTIONARY STATEMENTS, DIRECTIONS FOR USE, APPLICATION RATES AND TIMINGS, AND OTHER RESTRICTIONS.

**TURF AND LAWNS**
FOR USE IN GENERAL FARMSTEAD (NON-CROPLAND) AND SOD FARMS

WEEDS CONTROLLED
DICAMBA MAX 4, when applied at specified rates, will give control of many ANNUAL, BIENNIAL, and noted (*) PERENNIAL broadleaf weedy found in turf. DICAMBA MAX 4 will also give growth suppression of many other listed PERENNIAL broadleaf weed and WOODY brush and vine species. (Refer to GENERAL WEED LIST.)

MIXING AND APPLICATION
Apply 30 to 200 gallons of diluted spray per treated acre (3 qts. to 4 1/4 gals. per 1,000 sq. ft.), depending on density or height of weeds treated and on the type of equipment used.

RATES AND TIMINGS
Use the higher level of listed rate ranges when treating dense vegetative growth. For best performance, apply when weeds are emerged and actively growing.

**TANK MIX TREATMENTS**

READ AND FOLLOW THE LABEL OF EACH TANK MIX PRODUCT USED FOR PRECAUTIONARY STATEMENTS, DIRECTIONS FOR USE, APPLICATION RATES AND TIMINGS AND OTHER RESTRICTIONS.

Tank mix treatments of DICAMBA MAX 4 may be made with 2,4-D, MCPA, MCPP, or bromoxynil for control of additional weeds listed on the tank mix product label.

Apply 1/4 to 1/2 pint (1/10 to 1/4 lb. a.i.) of DICAMBA MAX 4 per treated acre with 1/2 to 1 1/2 lbs. acid equivalent of 2,4-D, MCPA, or MCPP, or with 3/8 to 1 lb. a.i. of bromoxynil. Use the higher level of the listed rate ranges when treating established weeds. Repeat treatments may be made as needed; however, do not exceed 2 pints (1 lb. a.i.) of DICAMBA MAX 4 per treated acre during the growing season.

**GRASS SEED CROPS**

GRASSES GROWN FOR SEED SUCH AS BERMUDA GRASS, BLUEGRASS, WINTER RYEGRASS AND RYEGRASS

IMPORTANT

Observe all precautions. Read and follow mixing and application instructions. Refer also to the PASTURE, HAY, RANGELAND, AND GENERAL FARMSTEAD (NON-CROPLAND AREAS) section for possible grazing and feeding restrictions.

Do not use in bermudagrass unless possible crop injury can be tolerated.

**WEEDS CONTROLLED**

DICAMBA MAX 4 will provide control or suppression of annual broadleaf weeds listed below. For improved control of listed weeds plus additional weeds, it is recommended that DICAMBA MAX 4 be applied in a tank mix with other herbicides.

<table>

1 Top growth control only
RATES AND TIMINGS
Apply 1/2 to 1 pint of DICAMBA MAX 4 per treated acre on SEEDLING GRASS after the crop reaches the 3-5 leaf stage. Apply up to 2 pints of DICAMBA MAX 4 on well-established Perennial grass. DO NOT APPLY AFTER THE GRASS SEED CROP BEGINS TO JOINT. For best performance, make applications when weeds are in the 2-4 leaf stage and rosettes are less than 2 inches across. Use the higher level of listed rate ranges when treating more mature weeds or dense vegetative growth.

TANK MIX TREATMENTS
For control of grasses or additional broadleaf weeds, DICAMBA MAX 4 may be tank mixed with all broadleaf herbicides registered for use in Grass Seed Production. Read and follow the label of each tank mix product used for precautionary statements, directions for use, weeds controlled and geographic and other restrictions.

Broadcast Rate Per Treated Acre:

</tr>
</tbody>
</table>

1 When using formulations other than 4 lb/gal use pounds active/acre listed.

ANNUAL GRASS CONTROL
For suppression of ANNUAL GRASS WEEDS such as:
Brome, Dewny (Cheatgrass)
Brome, Rigut
Fescue, Rattle
Windgrass
Apply up to 2 pints (1lb. a.i.) of DICAMBA MAX 4 per treated acre in the fall or late summer after harvest and burning of established grass seed crops (maximum of 2 treatments per year). Applications should be made immediately following first irrigation when the soil is moist and before weeds have more than 2 leaves.

PREPLANT DIRECTIONS (POST HARVEST/FALLOW/CROP STUBBLE/SET-A-SIDE) FOR BROADLEAF WEED CONTROL BEFORE WHEAT, CORN, SORGHUM, SOYBEANS
IMPORTANT
Observe all precautions. Read and follow mixing and application instructions.

WEEDS CONTROLLED
DICAMBA MAX 4 may be applied alone or in tank mix combinations with other herbicides registered for this use. DICAMBA MAX 4 can be applied either POST HARVEST in the fall, spring or summer during the FALLOW period or to CROP STUBBLE/SET-A-SIDE acres. DICAMBA MAX 4, when applied at the specified rates, will control many ANNUAL broadleaf weeds; see the WEEDS CONTROLLED section under small grains. In addition, DICAMBA MAX 4 will control or suppress the following BIENNIAL and PERENNIAL broadleaf weeds:
**DICamba Max 4 DATES PER TREATED ACRE**

</thead>
<tbody>
<tr>
<td>Annual</td>
<td>2.8 pints (1.5 liters)</td>
</tr>
<tr>
<td>Fall</td>
<td>1.4 pints (0.8 liters)</td>
</tr>
</tbody>
</table>

**NOTES:**
- Treatments may be made as needed; however, do not exceed a total of 2.1 pints (1 liter) per treatment of DICamba Max 4 per year.
- See the SPECIAL TASK MIX TREATMENTS section under this heading for specific control programs for these weeds.
- **TAKING DICamba MAX 4** is a broadleaf herbicide to control and delay the development of weeds between applications.
- For best performance, make application as early as practicable before the flowering stage of weeds when feasible.
- For best results, make application when temperatures are above 50°F (10°C) and after any chance of severe frost is past.

1 Tank mixes of DICAMBA MAX 4 with these products may be subject to special restrictions. See the Product Label of the tank mix partner for intended use rates, restrictions and other precautions.

2 When tank mixing with sulfonylurea herbicides, refer to the product label for rates and restrictions. Use a surfactant of at least 80% active ingredient at the rate of 1.2 quarts/100 gallons of spray or not more than 0.25-0.5% by volume. Use the highest rate of surfactant when using the lower rate ranges of the tank mix and/or when treating more mature weeds or dense vegetative growth. Sulfonylurea resistant weeds may not be controlled by tank mixes of DICAMBA MAX 4 and a sulfonylurea. Refer to the DICAMBA MAX 4 tank mix section for alternative tank mixes.

3 When using formulations other than 4 lb/gal use pounds active/acre listed.

DICAMBA MAX 4 BROADCAST RATE PER TREATED ACRE FOR BIENNIAL AND PERENNIAL WEED CONTROL:

Apply 1 to 2 quarts (0.5-1 lb a.i.) of DICAMBA MAX 4 with:

</tbody>
</table>

1 When using formulation other than 4 lb/gal use pounds active/acre listed.

SPECIAL TANK MIX TREATMENTS

For suppression of perennial weeds, apply 1/2-1 pint of DICAMBA MAX 4 with 8-16 fluid ounces of glyphosate herbicide per treated acre.

For wild garlic control, apply 1 pint DICAMBA MAX 4 with 3 pints of 2,4-D LV Ester (4 lb/gal) per treated acre. Apply when wild garlic is 4 to 8 inches tall.
For Canada thistle control, use DICamba MAX 4, or DICAMBA MAX 4 plus Curtail® or DICAMBA MAX 4 plus glyphosate herbicide or glyphosate tank mix treatments.

Application may be made during fallow periods for control of volunteer barley, bulbous bluegrass, downy brome, jointed goatgrass, common rape and volunteer wheat when they are actively growing. Use 1 pint DICAMBA MAX 4 with 1/2-1 lb pronamide 50W. Fall seeded wheat may be planted 9 months or more after application. For best performance, make application between mid-October and mid-December, prior to soil freeze up.

During fallow periods, apply DICAMBA MAX 4 plus Landmaster® BW or Fellow Master® herbicide to give improved control of Kochia, wild buckwheat, prickly lettuce, field bindweed and Canada thistle. Use 1/8-1/4 pint of DICAMBA MAX 4 plus 22 to 54 fluid ounces of Landmaster® BW or Fellow Master® herbicide for annual weed control or 1/4 to 1/2 pint DICAMBA MAX 4 plus 22 to 54 fluid ounces of Landmaster® BW or Fellow Master® herbicide for perennial weed suppression.

CROPING RESTRICTIONS

The following recommendations are based on DICAMBA MAX 4 use rates up to 4 pints (2 lb. a.i.) per treated acre applied in 2 applications per year at a maximum rate of 2 pints (1.0 lb. a.i.) per application.

CORN, SORGHUM and SOYBEANS may be planted in the spring following applications made during the previous year. If less than 1 inch of rainfall occurs between application and first killing frost, treated areas should be cultivated to allow herbicide to come in contact with moist soil. Cultivation may take place before or immediately after ground thaw.

Soybean injury may occur if the interval between application and planting is less than specified. In areas with greater than 30 inches of rainfall, delay planting for 30 days per pint of DICAMBA MAX 4 per treated acre. In areas with less than 30 inches of rainfall, delay planting for 45 days per pint of DICAMBA MAX 4 per treated acre. Exclude days when ground is frozen.

WHEAT may be planted in the fall or spring following applications. Also, spot applications may be made any time prior to crop emergence if crop injury can be tolerated in treated areas. Wheat injury may occur if the interval between application and planting is less than specified.

East of the Mississippi River, the interval is 20 days per pint of DICAMBA MAX 4 per treated acre or 1.25 days per 1 ounce. Moisture is essential for DICAMBA MAX 4 degradation. Exclude days when ground is frozen.

West of the Mississippi River, the interval is 45 days per pint of DICAMBA MAX 4 per treated acre or 3 days per ounce. Moisture is essential for DICAMBA MAX 4 degradation. Exclude days when ground is frozen.

Following a normal harvest of barley, oats, or wheat, any rotation crop may be planted. If the interval before harvest is shortened, such as when cover crops will be plowed under, do not follow up with the planting of a sensitive crop.

CONTROL OF PERENNIAL BROADLEAF WEEDS IN CROPLAND (SPOT APPLICATION ONLY)

FOR USE ONLY IN THE STATES OF IDAHO, MONTANA, NEVADA, OREGON, UTAH AND WASHINGTON.

DICAMBA MAX 4 may be applied as a Spot Application to an area no greater than 1,000 sq. ft. per acre.

IMPORTANT

Observe all precautions. Read and follow mixing and application instructions.

Do not treat subirrigated cropland or areas where the soil remains saturated with water throughout the year.

Make only one application of DICAMBA MAX 4 per year.
WEEDS CONTROLLED

DICAMBA MAX 4, when applied at specified rates, will control many broadleaf weeds including:

- Bindweed, Field
- Knapweed, Russian
- Dock, Broadleaf (Bitterdock)
- Regrowt, Tansy
- Dock, Curly
- Spurge, Leafy
- Knapweed, Black
- Thistle, Canada

RATES AND TIMINGS

DICAMBA MAX 4 may be applied at any time following a crop harvest to stubble, fallow or other cropland. Application should be made when weeds are actively growing and prior to a killing frost. Apply a maximum of 2 pints (1.0 lb. a.i.) of DICAMBA MAX 4 per 1,000 sq. ft. per acre per application. Application may be made up to one month prior to the planting of wheat.

NOTE: Do not use unless injury to wheat or rotated barley will be acceptable. Barley, oats, corn, sorghum (milo), annual or perennial grass crops may be planted into treated areas one year after application. Crops grown for seed other than perennial grass seeds should not be planted into treated areas until three years after application. Do not plant broadleaf crops such as alfalfa, beans, peas, potatoes, or sugar beets into treated areas until two years after application.

In most cases, treatments will not kill perennial weed seedlings, which germinate from seed one or two years after treatment. Once the effect of the chemical has been lost, a follow-up program for seedling control or other cultural practices should be instituted.

WIPER APPLICATION USES

IMPORTANT: Observe all precautions.

DICAMBA MAX 4 may be applied through wiper application equipment to control or suppress actively growing broadleaf weeds, brush and vines. Use a solution containing 1 part DICAMBA MAX 4 to 1 part water. Do not contact desirable vegetation with herbicide solution. Wiper application should only be made to crops (including pastures) and non-cropland areas described in this label with the exception of Grain Sorghum (Milo).

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

PESTICIDE STORAGE

Store in original containers in a well-ventilated area separately from fertilizer, feed and foodstuffs. Avoid cross-contamination with other pesticides. Spillage or leakage should be contained and absorbed with clay granules, sawdust, or equivalent material for disposal. [Optional Bulk Storage Instructions: Ground water contamination may be reduced by digging and flooding of permanent liquid storage sites with an impermeable material.]

PESTICIDE DISPOSAL

Triple rinse pesticide containers and use rinsates in the pesticide application. Wastes which cannot be used according to label instructions may be disposed of on site or at an approved waste disposal facility.

CONTAINER HANDLING

Non-refillable containers. Plastic or Metal. Do not reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying. Offer for recycling, if available, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities, such as burning of plastic containers. If burned, stay out of smoke.

Non-refillable container less than or equal to 6 gallons: Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.
### Non-refillable container greater than 5 gallons:
Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip back and forth several times. Empty the rinseate into application equipment or a mix tank or store rinseate for later use or disposal. Repeat this procedure two more times.

Pressure rinse as follows (all sizes): Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank or collect rinseate for later use or disposal. Insert pressure rinsing nozzle in the side of the container and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

### Refillable container (250 gallon):
Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To clean the container before final disposal, empty the remaining contents from the container into application equipment or mix tank. Fill the container about 10 percent full with water. Agitate vigorously or recirculate water with pump for 2 minutes. Pour or pump rinseate into application equipment or rinseate collection system. Repeat this rinsing process two more times.

### CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

**NOTICE:** Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The directions for use of this product must be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather, presence of other materials, or other influencing factors in the use of the product, which are beyond the control of DIRECT AG SOURCE, LLC or Seller. All such risks shall be assumed by the Buyer and User, and Buyer and User agree to hold DIRECT AG SOURCE, LLC and Seller harmless for any claims relating to such factors.

DIRECT AG SOURCE, LLC warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the directions for use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. This warranty does not extend to the use of this product contrary to label instructions or under abnormal conditions or under conditions not reasonably foreseeable to or beyond the control of Seller or DIRECT AG SOURCE, LLC, and Buyer and User assume the risk for such use. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, NO OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS FOR PARTICULAR PURPOSE OR MERCHANTABILITY IS MADE. This warranty is also subject to the conditions and limitations stated herein.

To the extent consistent with applicable law, neither DIRECT AG SOURCE, LLC nor Seller shall be liable for any incidental, consequential or special damages resulting from the use or handling of this product. THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF DIRECT AG SOURCE, LLC OR SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES INCLUDING CLAIMS BASED OF BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, STRICT LIABILITY, TORT OR OTHERWISE RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT, OR AT THE ELECTION OF DIRECT AG SOURCE, LLC OR SELLER, THE REPLACEMENT OF THE PRODUCT.

For any and all claims, losses, injuries or damages including claims based of breach of warranty, contract, negligence, strict liability, tort or otherwise resulting from the use or handling of this product shall be the return of the purchase price of the product, or at the election of DIRECT AG SOURCE, LLC or SELLER, the replacement of the product.
