Do not use in places where the water is used or in contact with fish, wildlife or aquatic life.
Closing your pool with The GLB Pool Closing Kit will make spring opening a cinch!

The GLB® Pool Closing Kit protects your pool from algae, metal and organic buildup over the winter months. Read directions and precautions on each product before using. Follow these 3 easy steps to ensure a clean pool next spring:

1. Before adding the contents of this kit, don’t forget to prepare your pool by brushing the pool walls and floor, vacuuming any debris from the pool floor and cleaning the filter with GLB Filter Cleanse™ solution.

2. After cleaning the pool, lower the water if you are in an area where the water must be lowered due to freezing conditions. Drain all water from pipes, pumps, heaters, filters and other pool equipment according to the manufacturer’s directions to prevent damage due to freezing.

3. Treat the water by adding the entire contents of this kit for pools up to 24,000 gallons of water. Be sure to distribute products evenly by adding product while carefully walking around the perimeter of the pool. Do not mix chemicals together; add each product separately.

   1. Add both bags of Oxy-Brite™ shock oxidizer.
   2. Add the entire bottle of Algimycin® Winter algicide.
   3. Add the entire bottle of Sequa-Sol® sequestering agent.
   4. Cover pool.

   If in a mild climate where the pool is left full and uncovered, refer to the manufacturer’s directions regarding filter operation.
