FOR USE IN CREEPING BENTGRASS, TALL FESCUE AND PERMANENTLY ESTABLISHED PERENNIAL RYEGRASS

This supplemental label expires on July 5, 2015 and must not be used or distributed after this date.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

THIS LABELING MUST BE IN THE POSSESSION OF THE USER AT THE TIME OF APPLICATION. READ THE LABEL AFFIXED TO THE CONTAINER FOR VELOCITY SG HERBICIDE BEFORE APPLYING. USE OF VELOCITY SG HERBICIDE ACCORDING TO THIS LABELING IS SUBJECT TO THE USE PRECAUTIONS AND LIMITATIONS IMPOSED BY THE LABEL AFFIXED TO THE CONTAINER FOR VELOCITY SG HERBICIDE.

DIRECTIONS FOR USE IN CREEPING BENTGRASS, TALL FESCUE AND PERMANENTLY ESTABLISHED PERENNIAL RYEGRASS

CROPS AND USE SITE

- Creeping Bentgrass, *Agrostis palustris*
- Perennial Ryegrass, *Lolium perenne*
- Tall Fescue, *Festuca arundinacea*
- Golf course fairways and tees mowed at 3/8" to 3/4" in height; sod farms mowed at 1/2" to 2" in height.

*Velocity* SG Herbicide may cause chlorosis when applied to creeping bentgrass, tall fescue or perennial ryegrass. The onset, intensity and persistence of symptoms are at least partially influenced by environmental conditions (e.g., temperature, cloud cover and rainfall) and cultural practices. When air temperatures are below 60°F symptoms appear more slowly and persist longer. Maximum weed control is observed when daily air temperatures are between 70 and 85°F. Avoid application of *Velocity* SG Herbicide in the spring before grass resumes active growth, or in the fall after growth slows.
Velocity SG Herbicide may cause significant injury to other turf species, especially certain cultivars of Kentucky bluegrass, Poa pratensis. Velocity SG Herbicide should not be applied to turf under heat stress, turf that has received exposure to frost or in heavy traffic and/or heavily shaded turf areas, which are more prone to herbicide injury.

RESTRICTIONS AND LIMITATIONS

- Do not apply through any type of irrigation system.
- Do not apply to golf greens or roughs.
- Do not apply if rain is expected within 12 hrs after application.
- Do not mow or irrigate turfgrass within 12 hrs after application.
- Do not apply to moist or wet turfgrass (including dew).
- Do not mix with wetting agents, spreader stickers, surfactants or other adjuvants.
- Do not apply more than 6 oz (0.066 lb ai/A) of Velocity SG Herbicide per acre per application.
- Do not apply more than a total of 12 oz (0.132 lb ai/A) of Velocity SG Herbicide per acre in a 28 day period.
- Do not apply more than a total of 24 oz (0.264 lb ai/A) of Velocity SG Herbicide per acre per use season year.
- Do not apply when daily high air temperatures are consistently below 60°F or above 90°F.
- Do not apply turfgrass exhibiting symptoms of Pythium blight or growing under stress due to drought, high or low temperatures, low fertility, heavy thatch, mechanical injury or other stresses.
- Do not apply in heavy traffic and/or heavily shaded turf areas.
- Do not apply within 7 days after turf has been exposed to frost or freezing conditions.

VELOCITY SG HERBICIDE USE IN CREEPING BENTGRASS, TALL FESCUE AND PERMANENTLY ESTABLISHED PERENNIAL RYEGRASS

Velocity SG Herbicide should only be applied during the time of year when creeping bentgrass, tall fescue, perennial ryegrass and target weeds are actively growing. The use season for Velocity SG Herbicide will therefore vary according to location.

Use Season (if all the above mentioned criteria are met):
- Northern States and higher elevations in Southern Temperate States - May 15 to October 15.
- Southern Temperate States - April 1 to June 1 and September 1 to November 1.

Contact your Valent representative or your local extension specialist for instructions specific to your area.

CONTROL PROGRAMS

Determine control program for Velocity SG Herbicide by considering the desired level and speed of control and the severity of infestation by annual bluegrass. More than one application of Velocity SG Herbicide is required for maximum weed control.
- **Targeted Conversion**
  This program will target and remove young, seedling annual bluegrass. Growth of established annual bluegrass will also be reduced and these plants will slowly weaken over time due to natural senescence and stress, but will not be replaced by newly germinated plants. Over time, turf will slowly transition from a mixed stand of desirable turf and annual bluegrass to a solid stand of creeping bentgrass, ryegrass or tall fescue.

  **Early Summer:** Make two applications at 1 to 2 oz/A on a 14 to 28 day interval. Initiate applications after annual bluegrass begins to germinate and maximum daily air temperatures are consistently above 70°F.

  **AND**

  **Fall:** Make two applications at 1 to 2 oz/A on a 14 to 28 day interval. Initiate applications near September 1 or after daily maximum air temperatures are consistently less than 80°F.

- **Season-long Conversion**
  This program will remove seedling annual bluegrass, and reduce the growth of established annual bluegrass. Over time, turf will slowly transition from a mixed stand of desirable turf and annual bluegrass to a solid stand of creeping bentgrass, ryegrass or tall fescue.

  Make monthly applications at 1 to 2 oz/A during the growing season. Begin applications after May 15 and once maximum daily air temperatures are consistently above 70°F. Conclude applications on or before October 15 or when maximum daily air temperatures are consistently below 65°F.

- **Rapid Conversion (Creeping Bentgrass ONLY)**
  **Option A:** Make two applications at 6 oz/A on a 10 to 14 day interval when maximum daily air temperatures are between 70°F and 85°F. Herbicide activity is maximized with shorter application intervals. This program should only be considered where annual bluegrass infestation is less than 10 percent and where complete removal will not result in unacceptable stand density.

  **Option B:** Make up to five applications at 2 oz/A on a 3 to 7 day interval when maximum daily air temperatures are between 70°F and 85°F. Herbicide activity is maximized with shorter application intervals. This program should only be considered where annual bluegrass infestation is less than 10 percent and where complete removal will not result in unacceptable stand density.

  **Overseeding after Velocity SG Herbicide:** Do not overseed turf until 7 days following the final Velocity SG Herbicide application.

  **Velocity SG Herbicide Applications after Overseeding:** Do not apply Velocity SG Herbicide to turf until at least 30 days after overseeding.
