Transline®
EPA Reg. No. 62719-259

Postemergence Broadleaf Weed Control in Cottonwood/Poplar and Eucalyptus Tree Plantations
(Not for Use or Distribution Within the State of Florida)

This supplemental label expires on December 26, 2013, and must not be used or distributed after this date.

ATTENTION
• It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
• This labeling must be in the possession of the user at the time of application.
• Read the label affixed to the container for Transline® herbicide before applying. Carefully follow all precautionary statements and applicable use directions.
• Use of Transline according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the container for Transline.

Directions for Use

Refer to product label for Precautions and Restrictions, Mixing and Application directions.

Use Transline for postemergence control of labeled broadleaf weeds in new and established plantings of cottonwood/poplar and eucalyptus tree plantations. Apply as a broadcast foliar spray over trees, as a banded or directed spray, or as a spot application. Broadcast apply in 10 gallons or more per acre total spray volume using ground or aerial equipment. Apply either during or after site preparation or after trees are planted. Use sufficient spray volume to ensure thorough coverage of weeds. Apply to new plantings only after they are established as indicated by several inches of new healthy growth.

Application Rates: Apply at a rate of 1/3 to 1 1/3 pints/acre in eucalyptus tree plantations and 1/3 to 2/3 pints/ acre in cottonwood/poplar plantations. Sequential applications may be made as long as the total rate per annual use season does not exceed 1 1/3 pints per acre.

In Hawaii: For control of additional weeds in eucalyptus tree plantations (listed below), apply as a broadcast spray over the top, as a directed or branded spray, or as a spot treatment.

Additional Weeds Controlled in Eucalyptus Tree Plantations in Hawaii:

<table>
<thead>
<tr>
<th>Weed Species</th>
<th>Application Rate (pint/acre)</th>
<th>Application Timing</th>
</tr>
</thead>
<tbody>
<tr>
<td>ageratum ( (Ageratum conyzoides) )</td>
<td>1/3 – 2/3</td>
<td>Smaller plants may be controlled using the lower rate. Plants may be slow to show control at lower rates.</td>
</tr>
<tr>
<td>fireweed ( (Erechtites hieracifolia) )</td>
<td></td>
<td></td>
</tr>
<tr>
<td>thickhead ( (Crassocephalum crepidioides) )</td>
<td></td>
<td></td>
</tr>
<tr>
<td>beggarweed ( (Desmodium intortum) )</td>
<td>2/3 – 1 1/3</td>
<td>Smaller plants may be controlled using the lower rate. Use 1 to 1 1/3 pints per acre for ( Desmodium intortum ) in flower stage.</td>
</tr>
<tr>
<td>horseweed ( (Conyza bonariensis) )</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
**Spot Application:** If applying as a spot treatment, apply to weeds on a spray to wet basis (not to runoff) with uniform and complete spray coverage. Avoid contact with foliage of cottonwood/poplar trees as much as possible. See use instructions for Hand-Held Sprayers.

**Hand-Held Sprayers:** Mix the amount of Transline corresponding to the desired broadcast rate in 1 gallon or more of water and apply to an area of 1000 sq ft. For larger areas, multiply the values in the table below by the area to be treated in “thousands” of square feet, e.g., if the area to be treated is 3500 sq ft, multiply the table value by 3.5 (3500 ÷ 1000 = 3.5). Prepare a spray solution by adding 1/4 fl oz of Transline per gallon of water. When applied at 1 gallon of spray per 1000 sq ft, this spray concentration is equivalent to a broadcast rate of 2/3 pint per acre. Using the example of 3500 sq ft, the applicator would use 3.5 x 1/4 fl oz = 7/8 fl oz of Transline in 3.5 gallons of water.

| Amount of Transline to Treat an Area of 1000 sq ft (pint/acre) (Mix in 1 Gallon or More of Spray) |
|-------------------------------------------------|-------------------------------------------------|-------------------------------------------------|-------------------------------------------------|
| 1/3                                             | 2/3                                             | 1                                               | 1 1/3                                           |
| 1/8 fl oz (3.6 mL)                              | 1/4 fl oz (7.3 mL)                              | 3/8 fl oz (11 mL)                               | 1/2 fl oz (15 mL)                               |

**Tank Mix:** This product may be applied in tank mix combination with labeled rates of other products provided (1) the tank mix product is labeled for the timing and method of application for the use site to be treated; and (2) tank mixing is not prohibited by the label of the tank mix product. Read carefully and follow all applicable use directions, precautions, and limitations on the respective product labels.

**Specific Use Precautions and Restrictions:**

- In California, do not exceed 2/3 pint per acre per annual use season.
- Do not tank mix Transline with other herbicides labeled for use in cottonwood/poplar tree plantations unless allowed by all herbicide labels. As a precaution it may be advisable to avoid contact with tree foliage.
- A tank mix of Transline with another herbicide may be made as a foliar application over eucalyptus trees provided that it is specifically allowed by the label of the tank mix partner.
- Certain broadleaf weeds, such as mustards, henbit, chickweed, kochia, common lambsquarters, pigweed, Russian thistle and bindweed, will not be controlled or suppressed.
