DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

THIS LABELING MUST BE IN THE POSSESSION OF THE USER AT THE TIME OF APPLICATION. READ THE LABEL AFFIXED TO THE CONTAINER FOR PRESIDIO FUNGICIDE BEFORE APPLYING. USE OF PRESIDIO FUNGICIDE ACCORDING TO THIS LABELING IS SUBJECT TO THE USE PRECAUTIONS AND LIMITATIONS IMPOSED BY THE LABEL AFFIXED TO THE CONTAINER FOR PRESIDIO FUNGICIDE.

SPECIFIC REQUIREMENTS – All Food Crops

When to Apply: Begin application when crop and/or environmental conditions favor disease development. Make applications on a 7 to 14 day interval, depending on disease pressure. Apply as a foliar spray in sufficient water to obtain thorough coverage.

Resistance Management: Presidio Fungicide must be used as part of an Integrated Pest Management (IPM) program. Apply as a foliar spray in a tank mix with another labeled fungicide product with a different mode of action on the target pathogen in sufficient water to obtain thorough coverage.

Restrictions and Limitations

- The maximum Presidio Fungicide application rate is 4 fl oz per acre per application and 12 fl oz per acre per season.
- Apply no more than 2 sequential applications of Presidio Fungicide before alternating with an effective fungicide from a different resistance management group.
- Do not make more than 4 applications of Presidio Fungicide per acre per season.
- In Hawaii: Apply Presidio Fungicide by foliar and chemigation (sprinkler irrigation) only.

**Specific Use Instructions**

For resistance management, *Presidio* Fungicide must be tank mixed with a labeled rate of another fungicide active against the target pathogen, but with a different mode of action.

A maximum of 3 applications of *Presidio* Fungicide are allowed at the 4 oz rate with no more than two sequential applications. Apply *Presidio* Fungicide at any of the following application timings/methods:

1. Preplant incorporated treatment (broadcast or band) to a 2 inch depth prior to planting. Use sufficient water to ensure uniform soil coverage.
2. A foliar application at emergence.
3. Beginning 28 to 50 days after planting (shorter if conditions are favorable for disease and longer if they are not).
4. Continue applications on a 14 to 21-day interval by chemigation, by ground equipment with a spray directed to the base of the plant, or shanked in with liquid fertilizer. All ground applications must be followed by irrigation/rainfall with 0.25 to 1 inch of water to promote movement of material into the root zone.
5. Irrigation: Inject *Presidio* Fungicide into the irrigation water (do not use drip irrigation).
