STORAGE AND DISPOSAL
Do not contaminate water, food, or feed by storage or disposal. Storage: To maintain product quality, store at temperatures below 35°C. Keep container tightly closed when not in use. Pesticide Disposal: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixtures, or rinseate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste Representative at the nearest EPA Regional Office for guidance. Container Disposal: Nonrefillable container. Do not reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying. Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities.

DIRECTIONS FOR USE
It is a violation of Federal Law to use this product in a manner inconsistent with the labeling. NOTE: ADD CHECK- Mark 40224 SEPARATELY TO THE SYSTEM. DO NOT MIX IT WITH OTHER ADDITIVES, IN ORDER TO AVOID DECOMPOSITION OF CHECK- Mark 40224 DUE TO THE HIGH pH OF MANY ADDITIVE FORMULATIONS.
PAPER MILLS
For the control of bacterial, fungal, and yeast growths in pulp, paper and paperboard mills, add CHECK- Mark 40224 at the rate of 0.15-0.5 lb on ton of pulp or paper (dry basis). Addition may be continuous or intermittent, depending upon the type of system and the severity of contamination. It must be made with a metering pump at a location that will ensure uniform distribution of CHECK-MARK 40224 in the mass of fiber and water, such as the beaters, juvenile inlet or discharge, breaker chests, furnish chests, save-all, and white-water tanks.
HEAVY FOULED SYSTEMS must be boiled out, then treated with 0.15-0.35 lb in CHECK-MARK 40224/ton of paper (dry basis), as necessary for control. MODERATELY FOULED SYSTEMS must be treated continuously with 0.35-0.5 lb in CHECK-MARK 40224/ton of paper (dry basis) until the slime accumulation is controlled. Addition rates can then be reduced to 0.15-0.3 lb in CHECK-MARK 40224/ton of paper on a continuous or intermittent basis, as needed for control. Dislodged slime may cause breaks in the paper and a clean-up of the paper machine may be advisable.
SLIGHTLY FOULED SYSTEMS must be treated continuously with 0.15-0.35 lb in CHECK-MARK 40224/ton of paper (dry basis) until the slime accumulation is controlled. Addition rates can then be reduced to 0.15-0.3 lb in CHECK-MARK 40224/ton of paper on a continuous or intermittent basis, as needed for control. Dislodged slime may cause breaks in the paper and a clean-up of the paper machine may be advisable.

SLUG DOSING
Add product to basin of cooling system or at any other point of uniform mixing. Add 25-120 ppm product to the water in the system depending upon severity of contamination. Repeat treatment every four days or as needed to maintain control. Do not exceed more than 120 ppm product in system water per day. Badly fouled systems must be cleaned before treatment.

AIR-WASHER SYSTEMS
Not registered for this use in the State of California
NOTE: For use only in industrial airwash systems that maintain effective mixed eliminating components. For control of microbial growth in air washer systems use either continuous or slug dosing.
NOTE: A solution of product may be made on site for dosing the system. DO NOT MIX the product solution with other additives, in order to avoid decomposition of the active ingredient due to the high pH of many additive formulations.
CONTINUOUS FEED
Add product using metering device for continuous feed. Add 20-120 ppm per day of product to the water in the system depending on the severity of contamination. Badly fouled systems must be cleaned before treatment.
SLUG DOSING
Add product to basin of system or at any other point of uniform mixing. Add 5-320 ppm product to the water in the system depending upon severity of contamination. Repeat treatment every four days or as needed to maintain control. Do not exceed more than 120 ppm product in system water per day. Badly fouled systems must be cleaned before treatment.

PUBLICLY-OWNED TREATMENT WORKS
To control Coliform and OTHER BACTERIA
Add CHECK-Mark 40224 at a concentration of 1.0 to 1.0 ppm by weight of water being treated, depending on the severity of contamination in the system. Addition should be CONTINUOUS and must be made with a metering pump at a point in the system where mixing will be rapid and thorough. Add CHECK-MARK 40224 to the system in a location where contact time will be 30 minutes or greater before reaching the outfall.
To use as a Co-TREATMENT with CHLORINE
Add 0.4-1.5 ppm of CHECK-MARK 40224 by weight of water treated. Chlorination must result in a minimum detectable residual (i.e., greater than zero but less than the NPDES permit level). Addition must be CONTINUOUS and made at a point just after a high mixing chamber. Rapid mixing is necessary for maximum effectiveness.
CHECK-MARK 40224 must be added at a location where a contact time of 10 minutes or longer will be provided before reaching the outfall.
PRECAUTIONARY STATEMENTS
Hazards to Humans and Domestic Animals DANGER
CORROSIVE: Causes irreversible eye damage • May be Fatal if swallowed • Causes skin irritation • Harmful if inhaled or absorbed through skin • Do not get in eyes, on skin or on clothing • Avoid breathing spray mist or dust. When loading or handling wear protective eyewear (goggles or face shield).
Rapid mixing is necessary for maximum effectiveness. CHECK-MARK 40224 must be added at a location where a contact time of 10 minutes or longer will be provided before reaching the outfall.

KEEP OUT OF REACH OF CHILDREN
DANGER
If lavage is performed, suggest endotracheal and/or esophageal control. DANGER from lung aspiration must be weighed against whether to induce vomiting or not should be made by a physician. Chemical eye burns may require extended irrigation. Obtain prompt medical treatment, preferably from an ophthalmologist.

IF IN EYES
Hold eye open and rinse slowly and gently with water for 30 minutes. • Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. • Obtain prompt medical treatment, preferably from an ophthalmologist.

IF SWALLOWED
• Call a poison control center or doctor immediately for treatment advice. • Have person sip a glass of water if able to swallow. • Do not induce vomiting unless told to do so by the poison control center or doctor.

IF INHALED
• More person to fresh air. • If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible. • Call a poison control center or doctor for further treatment advice.

IF SKIN OR CLOTHING
• Take off contaminated clothing. • Rinse skin immediately with plenty of water for 15-20 minutes. • Call a poison control center or doctor for treatment advice. Have product container or label with you when calling.

IF ON SKIN OR CLOTHING
• Take off contaminated clothing. • Rinse skin immediately with plenty of water for 15-20 minutes. • Call a poison control center or doctor for treatment advice.

HOT LINE NUMBER
IN CASE OF AN EMERGENCY endangering life or property involving this product, call CHEMTREC at 1-800-424-9300.

NOTE TO PHYSICIAN
If damage is performed, suggest endotracheal and/or esophageal control. Danger from lung aspiration must be weighed against whether to induce vomiting or not should be made by a physician. Chemical eye burns may require extended irrigation. Obtain prompt consultation, preferably from an ophthalmologist. If burn is present, treat as any thermal burn, after decontamination. No specific antidote. Treatment of exposure should be directed at the control of symptoms and the clinical condition of the patient.

IMMEDIATE MEDICAL CARE
• Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using the toilet or using tobacco. • Remove and wash contaminated clothing separately before reuse.
