PF-62936

Voucher Herbicide

For selective postemergence control of annual and perennial broadleaf weeds and volunteer potatoes in wheat, barley, or oats not underseeded with a legume, fallow cropland and on-farm non-cropland uses (fence rows, building perimeters, and roadways).

ACTIVE INGREDIENT(S):
Fluroxypyr 1-methylheptyl ester: ((4-amino-3,5-dichloro-6-fluoro-2-pyridinyl)oxy)acetic acid – 6.88% . 0.64 lb./gal.
Acid Equivalent: fluroxypyr: ((4-amino-3,5-dichloro-6-fluoro-2-pyridinyl)oxy)acetic acid – 9.97% . 2-methyl-4-chlorophenoxyacetic acid2 . 27.59%
OTHER INGREDIENT(S) . 62.44%
TOTAL . 100.00%

1 Acid Equivalent: fluroxypyr: ((4-amino-3,5-dichloro-6-fluoro-2-pyridinyl)oxy)acetic acid – 6.88% . 0.64 lb./gal.
2 Acid Equivalent: MCPA: 2-methyl-4-chlorophenoxyacetic acid – 27.59% . 2.60 lb./gal.
Isomer Specific AOAC Method

KEEP OUT OF REACH OF CHILDREN DANGER/PELIGRO
Si usted no entiende la etiqueta, busque a alguien para que le explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

FIRST AID

IF IN EYES: Hold eye open and rinse slowly and gently with water for 15–20 minutes. Remove contact lenses, if present, after the first five minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

IF SWALLOWED: Immediately call a poison control center or doctor. Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give any liquid to the person. Do not give anything by mouth to an unconscious person.

HOT LINE NUMBER
Have the product container or label with you when calling a poison control center or doctor, or going for treatment. FOR A MEDICAL EMERGENCY INVOLVING THIS PRODUCT CALL: 1-866-944-8565.

Note to Physician: May pose an aspiration pneumonia hazard. Contains xylene range aromatic solvent.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read all “Directions for Use” carefully before applying.

SEE INSIDE LEAFLET FOR ADDITIONAL PRECAUTIONARY STATEMENTS AND COMPLETE DIRECTIONS FOR USE.

STORAGE AND DISPOSAL
Do not contaminate water, food, feed or fertilizer by storage or disposal.

PESTICIDE STORAGE: Store above 10°F or warm and agitate before use.

PESTICIDE DISPOSAL: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinseate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL: Nonrefillable containers 5 gallons or less: Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse container (or equivalent) promptly after rinsing. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by State and local authorities. Plastic containers are also disposable by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke. Nonrefillable containers larger than 5 gallons: Nonrefillable container. Do not reuse or refill this container. If recycling or reconditioning is not available, puncture and dispose of in a sanitary landfill or by other procedures approved by State and local authorities. Plastic containers are also disposable by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke. Triple rinse or pressure rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank or collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip. Refillable containers larger than 5 gallons: Refillable container. Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To clean the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 10 percent full with water. Agitate vigorously or recirculate water with the pump for minutes. Pour or pump rinsate into application equipment or rinsate collection system. Repeat this rinsing procedure two more times.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

DANGER

Corrosive. Causes irreversible eye damage. Harmful if swallowed. Do not get in eyes or on clothing. Wear appropriate protective eye-wear such as goggles, face shield, or safety glasses. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse. Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals.

Personal Protective Equipment (PPE)

Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category F on an EPA chemical resistance category selections chart.

Mixer, loaders, applicators, flaggers and other handlers must wear:
• Long-sleeved shirt and long pants
• Chemical-resistant gloves such as Barrier Laminate, Butyl Rubber, Nitrile Rubber, or Viton when mixing, loading, or using any handheld equipment
• Shoes plus socks
• Protective eyewear such as goggles, face shield, or safety glasses

Additional PPE requirements for mixers and loaders supporting aerial application to CRP acres or noncropland. These mixers/loaders also must wear:
• Chemical-resistant apron
• NIOSH-approved respirator with a dust/mist filter with MSHA/NIOSH approval number prefix TC-21C or any N2, R, P, or HE filter.

See “Engineering Controls” for additional requirements.

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

Engineering Controls Statements

Pilots must use an enclosed cockpit that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)].

USER SAFETY RECOMMENDATIONS

Users should:
• Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
• Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

This product is toxic to fish and may be toxic to aquatic invertebrates and aquatic plants. Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwaters or rinsate. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas. Runoff of this product will be reduced by avoiding applications when rainfall is forecasted to occur within 48 hours.

MCPCA has properties and characteristics associated with chemicals detected in groundwater.

The use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

Groundwater Contamination: Most cases of groundwater contamination involving phenoxy herbicides such as MCPCA have been associated with mixing/loading and disposal sites.

Caution should be exercised when handling MCPA pesticides at such sites to prevent contamination of groundwater supplies. Use of closed systems for mixing and transferring this pesticide will reduce the probability of spills. Placement of the mixing/loading equipment on an impervious pad to contain spills will help prevent groundwater contamination.
**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read all “Directions for Use” carefully before applying. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.

**AGRICULTURAL USE REQUIREMENTS**

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 48 hours.

**PPE** required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:
- Coveralls
- Chemical-resistant gloves made of any waterproof material
- Shoes plus socks
- Protective eyewear

**NON-AGRICULTURAL USE REQUIREMENTS**

The requirements of this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR Part 170).

The WPS applies when this product is used to produce agricultural plants on farms or nurseries. When this product is applied to non-cropland areas, keep unprotected persons out of treated areas until sprays have dried.

**PRODUCT INFORMATION**

**Voucher Herbicide** is a selective postemergence product for control of annual and perennial broadleaf weeds and volunteer pota-
toes in wheat, barley, or oats not underseeded with a legume, fallow cropland and on-farm non-cropland uses such as fence rows, building parameters, around irrigation equipment and roadways.

**Application Precautions and Restrictions**
- Do not apply this product directly to, or otherwise permit it to come in direct contact with, susceptible crops or broadleaf plants including alfalfa, cotton, lettuce, edible beans, lentils, peas, potatoes, radishes, soybeans, sugar beets, sunflowers, tomatos, tobacco, grapes, legumes, fruit trees, canola, tama mustard, other vegetables or ornamentals. Vapors from this product may injure susceptible plants in the immediate vicinity.
- Avoid applications where proximity of susceptible crops or other susceptible broadleaf plants is likely to result in exposure to spray or spray drift.
- Do not contaminate irrigation ditches or water used for domestic purposes.
- Do not apply in greenhouses.

**Maximum Application Rate:** Do not apply more than 35 fl. oz. of Voucher Herbicide (0.178 lb. ae fluroxypyr plus 0.71 lb. ae MCPA) per acre per growing season.

**Plant-back Restriction:** Plant only those crops listed on this label or Federally approved supplemental labeling for Voucher Her-
bicide within 120 days following application. For crops not listed on an MCPA label, or on crops for which no residue tolerances for MCPA have been established, a 1-year plantback interval must be observed.

**Chemigation:** Do not apply this product through any type of irrigation system.

**Management of Kochia Biotypes:** Research has suggested that many biotypes of kochia can occur within a single field. While kochia biotypes can vary in their susceptibility to Voucher Herbicide, all will be suppressed or controlled by the 1 1/2 pint labeled rate. Application of Voucher Herbicide at rates below the 1 1/2 pint rate can result in a shift to more tolerant biotypes within a field.

**Best Resistance Management Practice:**Extreme grain and corn production regions (such as Choute areas, Voucher Herbicide should be applied at kochia. In addition, Voucher Herbicide should be Use of these practices will preserve the utility of Vc

**Spray Drift Management**

Avoiding spray drift at the application site is the first related factors determines the potential for spray drift when making decisions.

**Importance of Temperature Inversion**

- **Temperature Inversion** sections of this label (a}
Spray Drift Management
Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment- and weather-related factors determines the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions.

- Apply only as a medium or coarser spray (ASAE standard 572) or a volume mean diameter of 300 microns or greater for spinning atomizer nozzles.
- Apply only when wind speed is 2–10 mph at the application site.

Aerial Application
The following drift management requirements must be followed to avoid off-target drift movement from aerial applications to agricultural field crops. These requirements do not apply to forestry applications, public health uses or to applications using dry formulations.

1. The boom length must not exceed 75% of the wingspan or 90% of the rotor blade diameter.
2. Release spray at the lowest height consistent with efficacy and flight safety. Do not release spray at a height greater than 10 feet above the crop canopy.
3. Nozzles must always point backward parallel with the airstream and never be pointed downwards more than 45 degrees. Where states have more stringent regulations, they must be observed.

When applications are made with a crosswind, the swath will be displaced downwind. The applicator must compensate for this displacement at the downwind edge of the application area by adjusting the path of the aircraft upward. Do not make applications into temperature inversions.

The applicator should be familiar with and take into account the information covered in the following Aerial Drift Reduction Advisory Information:

Ground Applications
To minimize spray drift, apply Voucher Herbicide in a total spray volume of 8 or more gallons per acre using spray equipment designed to produce large-droplet, low pressure sprays. Refer to the spray equipment manufacturer’s recommendations for detailed information on nozzle types, arrangement, spacing and operating height and pressure. Spot treatments should be applied only with a calibrated boom to prevent over application. Operate equipment at spray pressures no greater than is necessary to produce a uniform spray pattern. Operate the spray boom no higher than is necessary to produce a uniformly overlapping pattern between spray nozzles. Do not apply with hollow cone-type insecticide nozzles or other nozzles that produce a fine-droplet spray. Do not apply with a nozzle height greater than 4 feet above the crop canopy.

Importance of Droplet Size
The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (see “Wind”, “Temperature and Humidity”, and “Temperature Inversion” sections of this label).

Controlling Droplet Size:
- **Volume** – Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
- **Pressure** – Use the lower spray pressures for the nozzle. Higher pressure reduces droplet size and does not improve canopy penetration. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
- **Number of Nozzles** – Use the minimum number of nozzles that provide uniform coverage.
- **Nozzle Orientation** – Orienting nozzles so that the spray is released backwards, parallel to the airstream will produce larger droplets than other orientations. Significant deflection from the horizontal will reduce droplet size and increase drift potential.
- **Nozzle Type** – Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce larger droplets than other nozzle types.
- **Boom Length** – For some use patterns, reducing the effective boom length to less than 3/4 of the wingspan or rotor length may further reduce drift without reducing swath width.
- **Application** – Applications should not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

Swath Adjustment
When applications are made with a cross-wind or upwind of the field, the applicator must compensate for the distance an influence of wind speed should increase, with increasing drift.

Wind
Drift potential is lowest between wind speeds of 2-3 mph. Application should be avoided below 2 mph. The influence of wind patterns. Every applicator should be familiar with and take into account the information covered in the following Aerial Drift Reduction Advisory Information:

Temperature and Humidity
When making applications in low relative humidity, droplet evaporation is more severe when conditions favor temperature inversions.

Sprayer Cleanup
To avoid injury to or exposure of nontarget crops and volunteers, follow these instructions after use. Cleaning should occur as soon as possible after use with Voucher Herbicide by the following method:

1. Drain any remaining Voucher Herbicide from the tank and thoroughly wash the interior surfaces of the tank with water and recirculate for 15 minutes. All rinse water must be disposed of in compliance with local regulations.
2. Remove the nozzles and screens and clean.
3. If the spray equipment will be used on crop stubble, wash the outside of the spray tank and equipment thoroughly with water. Wash the inside of the tank with a solution of Voucher Herbicide.

Tank Mixing Precautions
- Add only a small amount of water-soluble pesticides at one time to avoid excessive drift potential.
- Carefully mix the pesticide with water-soluble adjuvants.
- Do not exceed the maximum application rate specified on the pesticide label.
- Use only the pesticide formulation for which the applicator has a current registration. Use only the pesticide formulation for which the applicator has a current registration.

Sprayer System Compatibility
The applicator should be familiar with and take into account the information covered in the following Aerial Drift Reduction Advisory Information:

- Do not exceed the application rate specified on the pesticide label.
- Use only the pesticide formulation for which the applicator has a current registration.
- Do not exceed the maximum application rate specified on the pesticide label.
- Use only the pesticide formulation for which the applicator has a current registration.

Fertilizer Compatibility
The applicator should be familiar with and take into account the information covered in the following Aerial Drift Reduction Advisory Information:

- Do not exceed the application rate specified on the pesticide label.
- Use only the pesticide formulation for which the applicator has a current registration.
- Do not exceed the maximum application rate specified on the pesticide label.
- Use only the pesticide formulation for which the applicator has a current registration.

Drift Reinforcement
The applicator should be familiar with and take into account the information covered in the following Aerial Drift Reduction Advisory Information:

- Do not exceed the application rate specified on the pesticide label.
- Use only the pesticide formulation for which the applicator has a current registration.
- Do not exceed the maximum application rate specified on the pesticide label.
- Use only the pesticide formulation for which the applicator has a current registration.

Drift Management Strategies
The applicator should be familiar with and take into account the information covered in the following Aerial Drift Reduction Advisory Information:

- Do not exceed the application rate specified on the pesticide label.
- Use only the pesticide formulation for which the applicator has a current registration.
- Do not exceed the maximum application rate specified on the pesticide label.
- Use only the pesticide formulation for which the applicator has a current registration.
Swath Adjustment
When applications are made with a cross-wind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase, with increasing drift potential (higher wind, smaller drops, etc.).

Wind
Drift potential is lowest between wind speeds of 2–10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed.

Application should be avoided below 2 mph due to variable wind direction and high inversion potential. Note: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect drift.

Temperature and Humidity
When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

Temperature Inversions
Do not make applications into temperature inversions.

Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a connected cloud (under low wind conditions) indicates an inversion, while smoke that moves upwards and rapidly dissipates indicates good vertical air mixing.

Sensitive Areas
The pesticide should only be applied when the potential for drift to adjacent sensitive areas (e.g., residential areas, bodies of water, known habitat for threatened or endangered species, non-target crops) is minimal (e.g., when wind is blowing away from the sensitive areas).

Sprayer Cleanup
To avoid injury to or exposure of nontarget crops, thoroughly clean and drain spray equipment used to apply Voucher Herbicide after use. Cleaning should occur as soon as possible after application of Voucher Herbicide. Spray equipment should be cleaned after use with Voucher Herbicide by the following procedure:

1. Drain any remaining Voucher Herbicide from the spray tank and dispose of according to label disposal instructions.
2. Hose down the interior surfaces of the tank. Flush tank, hoses, boom, and nozzles with clean water for 10 minutes. Fill the tank with water and recirculate for 15 minutes. Spray part of the mixture through the hoses, boom, and nozzles and drain the tank.
3. Roughly wash the outside of spray tank and the boom.
4. Remove the nozzles and screens and clean separately.
5. If the spray equipment will be used on crops other than those labeled for Voucher Herbicide, repeat steps 1 and 2 and thoroughly wash the outside of spray tank and the boom.

MIXING INSTRUCTIONS

Tank Mix Compatibility Testing
A jar test should be done prior to tank mixing. Use a clear glass jar with lid and mix the several times and observe the mixture for apers, or other precipitates, it is not compatible.

Tank Mixing Instructions
Fill the spray tank to approximately 1/4 to 1/2 full. Add different formulation types in the order
1. Add dry flowables; wettable powders; aq
2. Maintain agitation and fill spray tank to concentrates and any solutions.

Finish filling the spray tank. Maintain conti

Application Timing: Apply to actively growing weeds prior to, at and following time of application. Only weeds that are emerging at the time of control.

Voucher Herbicide applications are rain-fast.

Application Rates: Generally, application of sensitive weed species. For less sensitive conditions such as drought or extreme temp will be needed. Weeds growing in the absen

Spot Treatments:

Tank Mix Compatibility Testing

A jar test should be done prior to tank mixing to ensure compatibility of Voucher Herbicide and other pesticides, fertilizers, or carriers. Use a clear glass jar with lid and mix the tank mix ingredients in their relative proportions. Invert the jar containing the mixture several times and observe the mixture for approximately 1/2 hour. If the mixture balls-up, forms flakes, sludges, gels, oily films or layers, or other precipitates, it is not compatible and the tank mix combination should not be used.

Tank Mixing Instructions

Fill the spray tank to approximately 1/4 to 1/3 of the total spray volume required. Start agitation.

1. Add dry flowables; wettable powders; aqueous suspensions, flowables or liquids.
2. Maintain agitation and fill spray tank to 3/4 of total spray volume and then add Voucher Herbicide and other emulsifiable concentrates and any solutions.

Finish filling the spray tank. Maintain continuous agitation during mixing, final filling and throughout application. If spraying and agitation must be stopped before the spray tank is empty, the materials may settle to the bottom. Settled materials must be re-suspended before spraying is resumed. A sparger agitator is particularly useful for this purpose. Settled material may be more difficult to re-suspend than when originally mixed.

APPLICATION DIRECTIONS

Application Timing: Apply to actively growing weeds. Extreme growing conditions such as drought or near freezing temperatures prior to, at and following time of application may reduce weed control and increase the risk of crop injury at all stages of growth. Only weeds that are emerged at the time of application will be affected. Foliage that is wet at the time of application may decrease herbicidal activity.

Application Rates: Generally, application rates at the lower end of the rate range will be satisfactory for young, succulent growth of sensitive weed species. For less sensitive species, perennials, and under conditions where control is more difficult (plant stress conditions such as drought or extreme temperatures, dense weed stands and/or larger weeds), the higher rates within the rate range will be needed. Weeds growing in the absence of crop competition generally require higher rates to obtain satisfactory control or suppression.

Effect of Temperature on Herbicidal Activity: Herbicidal activity of Voucher Herbicide is influenced by weather conditions. Optimum activity requires active crop and weed growth. The temperature range for optimum herbicidal activity is 55°F to 75°F. Reduced activity will occur when temperatures are below 45°F or above 85°F. Frost before application (3 days) or shortly after (3 days) may reduce weed control and crop tolerance.

Coverage: For best results, apply in 3 or more gallons per acre by air or in 8 or more gallons per acre by ground equipment. Do not exceed 40 gallons per acre total spray volume. Use sufficient spray volume to provide thorough coverage and a uniform spray pattern. Inadequate spray volume and coverage may result in decreased weed control. As crop canopy and weed density increase, spray volume should be increased to obtain equivalent weed control. Use larger nozzle tips or decrease spraying speed to increase spray volume rather than increasing boom pressure.

Refer to manufacturer’s recommendations for information on relationships between spray volume, and nozzle size and arrangement.

Adjuvants: Use of a high-quality adjuvant labeled for use on growing crops is suggested for improved weed control. Adjuvants are especially beneficial when applications are made (a) at lower carrier volumes, (b) under conditions of cool temperature, low relative humidity or drought, or (c) to small, heavily pubescent kochia.

When an adjuvant or a specific adjuvant product (such as a drift control agent) is to be used with this product, use a Chemical Producers and Distributors Association (CPDA) certified adjuvant.

Spot Treatments: To prevent misapplication, spot treatments should be applied with a calibrated boom or with hand sprayers according to directions provided below.

Hand-Held Sprayers: Hand-held or backpack sprayers may be used for spot applications of Voucher Herbicide if care is taken to apply the spray uniformly and at a rate equivalent to a broadcast application. Application rates in the table are based on a n area of 1,000 sq. ft.

Mix the amount of Voucher Herbicide (fl. oz. or ml) corresponding to the desired broadcast rate in one or more gallons of spray. To calculate the amount of product required for larger areas, multiply the table value (fl. oz. or ml) by the area to be treated in “thousands of square feet”, e.g., if the area to be treated is 3,500 sq. ft., multiply the table value by 3.5 (calc. 3,500 ÷ 1,000 = 3.5). An area of 1,000 sq. ft. is approximately 10.5 X 10.5 yards (strides) in size.
APPLI

Crop Uses
Wheat (Including Durum), Barley, and Oats
Apply as a broadcast postemergence treatment to active growth stage up to and including flag leaf emergence (Z actively growing, but before weeds are 8 inches tall or 8 inches tall. Only weeds emerged at the time of treatm near freezing temperatures prior to, at and following tim injury at all stages of growth. Do not use if cereal crop i

Spot Application:

(1) Suppression is expressed as a reduction in weed competition (reduction population or vigor) as compared to untreated areas. The degree of weed control and duration of effect may vary with weed size, density, application rate, coverage, and growing conditions before, during and after treatment.

Amount of Voucher Herbicide to Equal Specified Broadcast Rate
(Mix with 1 Gallon or More of Water and Apply to 1,000 sq. ft.)

APPLICATION SITES

Crop Uses
Wheat (Including Durum), Barley, and Oats
Apply as a broadcast postemergence treatment to actively growing wheat (including durum), barley or oats, from the 3-leaf crop growth stage up to and including flag leaf emergence (Zadoks scale 39) for control of broadleaf weeds. Apply when weeds are actively growing, but before weeds are 8 inches tall or vining. For control of volunteer potatoes, apply before potato plants are 8 inches tall. Only weeds emerged at the time of treatment will be controlled. Extreme growing conditions such as drought or near freezing temperatures prior to, at and following time of application may reduce weed control and increase the risk of crop injury at all stages of growth. Do not use if cereal crop is underseeded with a legume.

Spot Application: Spot applications may be made; however, to prevent over-application spot treatments should be applied at rates and spray volumes equivalent to broadcast application. See instructions for “Spot Application” in “Application Directions” section.

Broadcast Application Rates:
(Numbers in parentheses (-) refer to footnotes following table.)

<table>
<thead>
<tr>
<th>Weed Size or Species (1)</th>
<th>Application Rate (pint/acre)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Susceptible broadleaf weed seedlings less than 4 inches tall (2)</td>
<td>1 1/8</td>
</tr>
<tr>
<td>Susceptible broadleaf weed seedlings less than 8 inches tall or vining</td>
<td>1 1/2</td>
</tr>
<tr>
<td>Volunteer potatoes</td>
<td>1 1/2 – 2 1/8 (3)</td>
</tr>
</tbody>
</table>

(1) See “Weeds Controlled or Suppressed” section for a complete listing of weeds controlled or suppressed.
(2) The 1 1/8 pints/acre rate will generally provide satisfactory control of kochia seedlings less than 4 inches tall (including ALS-resistant biotypes). However, when conditions for control are less favorable, such as under drought or cool temperatures, the 1 1/2 pints/acre rate will provide more consistent control of kochia seedlings 1 to 4 inches tall. Control of small kochia with reduced rates will be more consistent if kochia is at least 1 inch tall. The 1 1/2 pints/acre rate should be used for optimal control of dicamba-tolerant kochia populations (see “Management of Kochia Biotypes” in the “General Information” section of this label).
(3) Crop injury may occur at rates higher than 1-1/2 pint/acre.

Restrictions:
- Do not apply more than 35 fl. oz. (0.178 lb. ae fluroxypyr plus 0.71 lb. ae MCPA) per acre of Voucher Herbicide or make more than one application per season.
- Do not allow livestock to forage or graze treated areas within 7 days after application.
- Preharvest Interval: Do not apply within 14 days before cutting of hay or 40 days before harvesting of grain and straw.

Fallow Cropland
For best results, apply as a single broadcast treatment by ground or aerial equipment to control susceptible broadleaf weeds. Apply when weeds are actively growing, but before kochia is 8 inches tall and before wild buckwheat is vining. Voucher Herbicide may be applied alone or in tank-mix combination with other herbicides (see “Tank Mixing Precautions” in “Mixing Instructions” section).

Broadcast Application Rates:

<td>1 1/2 – 2</td>
</tr>
</tbody>
</table>

† See “Weeds Controlled or Suppressed” section for a complete listing of weeds controlled or suppressed.

On-Farm Non-Cropland
For best results, apply as a single broadcast treatment or spot treatment to control susceptible broadleaf weeds in on-farm non-cropland areas such as fence rows, building perimeters, around irrigation equipment and on-farm private roadways. Apply at the rate of 1 1/2 to 2 3/4 pints per acre when weeds are small and actively growing, but before weeds are 8 inches tall or vining. Spot treatments should be applied at rates and spray volumes equivalent to broadcast application. See instructions for “Spot Application” in “Application Directions” section. See “Weeds Controlled or Suppressed” section for a complete listing of weeds controlled or suppressed.

CRP Acres
Do not use on CRP acres that are underseeded

Voucher Herbicide may be applied to Conservation treatment by ground or aerial equipment to controlSusceptible broadleaf weed seedlings less than 8 inches tall or vining. When weeds are actively growing, before weeds are 8 inches tall or vining. For control of volunteer potatoes, apply before potato plants are 8 inches tall. Only weeds emerged at the time of treatment will be controlled. Extreme growing conditions such as drought or near freezing temperatures prior to, at and following time of application may reduce weed control and increase the risk of crop injury at all stages of growth. Do not use if cereal crop is underseeded with a legume.

Spot Application: Spot applications may be made; however, to prevent over-application spot treatments should be applied at rates and spray volumes equivalent to broadcast application. See instructions for “Spot Application” in “Application Directions” section.

Restriction: Grazing or haying of treated CRP acres is prohibited.

PESTICIDE STORAGE:
Store above 10°F or warm

PESTICIDE DISPOSAL:
Pesticide wastes are toxic to aquatic life. Do not contaminate water, food, feed or fertilizer by applying to or allowing to enter bodies of water. Do not dispose of in bunkers or lagoons. Do not allow pesticides to enter any public water supply. Do not contaminate water, food, feed or fertilizer by applying to or allowing to enter bodies of water.

CONTAINER DISPOSAL:
Nonrefillable containers 5 gallons or less: Nonrefillable containers 5 gallons or less are disposable by burning or by other procedures approved by State and local authorities. Plastic containers are also disposable by burning.
Nonrefillable containers larger than 5 gallons: Nonrefillable containers larger than 5 gallons are reconditioning is not available, puncture and dispose authorities. Plastic containers are also disposable by burning, stay out of smoke. Triple rinse or pressure rinse as follows:

Triple rinse as follows: Empty the remaining contents from the container into application equipment or a mix tank. Fill the container with water. Replace and tighten closures. Tip container on its side and tip it back and forth several times. Empty the rinseate into a suitable container for any other purpose, cleaning the container equipment or a mix tank. Fill the container with water. Replace and tighten closures. Tip container on its side and tip it back and forth several times. Repeat this procedure two more times.

Pressure rinse as follows: Empty the remaining contents from the container into application equipment or a mix tank. Fill the container with water. Replace and tighten closures. Tip container on its side and tip it back and forth several times. Empty the rinseate into a suitable container for any other purpose, cleaning the container equipment or a mix tank. Fill the container with water. Replace and tighten closures. Tip container on its side and tip it back and forth several times. Repeat this procedure two more times.

PESTICIDE STORAGE:
Store above 10°F or warm

CRP Acres
Do not use on CRP acres that are underseeded with desirable legumes, clovers, or other sensitive broadleaf plants. 

Voucher Herbicide may be applied to Conservation Reserve Program (CRP) acres. For best results, apply as a single broadcast treatment by ground or aerial equipment to control susceptible broadleaf weeds. Apply at the rate of 1 1/2 to 2 pints per acre when weeds are small and actively growing, but before weeds are 8 inches tall or vining. Spot treatments should be applied at rates and spray volumes equivalent to broadcast application. See instructions for “Spot Application” in “Application Directions” section. See “Weeds Controlled or Suppressed” section for a complete listing of weeds controlled or suppressed.

Restriction: Grazing or haying of treated CRP acres is prohibited.

STORAGE AND DISPOSAL
Do not contaminate water, food, feed or fertilizer by storage or disposal.

PESTICIDE STORAGE: Store above 10°F or warm and agitate before use.

CONTAINER DISPOSAL: Nonrefillable containers 5 gallons or less: Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse container (or equivalent) promptly after emptying. Refillable containers larger than 5 gallons: Refillable container. Refill this container with pesticide only. Do not reuse or refill this container. Cleaning the container prior to refill is the responsibility of the person disposing of the container.

Nonrefillable containers larger than 5 gallons: Nonrefillable container. Do not reuse or refill this container. If recycling or reconditioning is not available, puncture and dispose of in a sanitary landfill or by other procedures approved by State and local authorities. Plastic containers are also disposable by incineration, or if allowed by State and local authorities, by burning. If burned, stay out of smoke.

Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by State and local authorities. Plastic containers are also disposable by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

Refillable containers larger than 5 gallons: Refillable container. Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To clean the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 20 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinsate into application equipment or rinsate collection system. Repeat this rinsing procedure two more times.

Nonrefillable containers 5 gallons or less: Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse container (or equivalent) promptly after emptying. Refillable containers larger than 5 gallons: Refillable container. Refill this container with pesticide only. Do not reuse or refill this container. Cleaning the container prior to refill is the responsibility of the person disposing of the container.

Nonrefillable containers larger than 5 gallons: Nonrefillable container. Do not reuse or refill this container. If recycling or reconditioning is not available, puncture and dispose of in a sanitary landfill or by other procedures approved by State and local authorities. Plastic containers are also disposable by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over on its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times.

Pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank and collect rinsate for later use or disposal. Insert pressure rinsing nozzle and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

Nonrefillable containers 5 gallons or less: Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse container (or equivalent) promptly after emptying. Refillable containers larger than 5 gallons: Refillable container. Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To clean the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 20 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinsate into application equipment or rinsate collection system. Repeat this rinsing procedure two more times.

Nonrefillable containers larger than 5 gallons: Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse container (or equivalent) promptly after emptying. Refillable containers larger than 5 gallons: Refillable container. Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To clean the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 20 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinsate into application equipment or rinsate collection system. Repeat this rinsing procedure two more times.

Nonrefillable containers larger than 5 gallons: Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse container (or equivalent) promptly after emptying. Refillable containers larger than 5 gallons: Refillable container. Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To clean the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 20 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinsate into application equipment or rinsate collection system. Repeat this rinsing procedure two more times.
sensitive broadleaf plants. They apply as a single broadcast 1 1/2 to 2 pints per acre when they should be applied at rates and cation directions section. See mixture, or rinsate is a viola- nt your state pesticide or office for guidance. mixture, or rinsate is a viola- nt your state pesticide or office for guidance.

- Offer for recycling, if the remaining contents into do not. Pour rinsate into appli- s flow begins to drip. Repeat of in a sanitary landfill, or by incineration, or, if allowed by his container. If recycling or approved by state and local authorities, by burning. If styling.

- Fill the container 1/4 full with water. Agitate up equipment or rinsate collection. Keep out DAN Si usted no entiende la etiqueta (if you do not understand)

- If in eyes: Hold eye open and rinse with water for at least 15 minutes. Remove contact lenses if present and easy to do, then rinse eyes again. Call a poison control center or get medical help right away.

- If swallowed: Do not induce vomiting unless instructed to do so by the poison control center. Do not give any liquid. Do not give anything by mouth unless instructed to do so by the poison control center.

- Have the product container or label with you. See inside leaflet for additional information.

FIRST AID

IF IN EYES:
• Hold eye open and rinse slowly and gently with water for 15 – 20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

IF SWALLOWED:
• Immediately call a poison control center or doctor.
• Do not induce vomiting unless told to do so by a poison control center or doctor.
• Do not give any liquid to the person.
• Do not give anything by mouth to an unconscious person.

HOT LINE NUMBER
Have the product container or label with you when calling a poison control center or doctor, or going for treatment. **FOR A MEDICAL EMERGENCY INVOLVING THIS PRODUCT CALL: 1-866-944-8565.**

Note to Physician: May pose an aspiration pneumonia hazard. Contains xylene range aromatic solvent.
