Aqua Guard Super Shock Quick

5-Step Pool Care System

Swimming Pool Water Disinfectant
TREATS 24,000 Gallons of Water

First Aid Call a Poison Control Center or doctor for emergency medical advice. Have the product container or label with you when calling a Poison Control Center or doctor.

Controls Algae & Bacteria
Reduces Chemical Needs
Quick Chlorine Boost

98.3% Available Chlorine

3.0% Total Chlorine

32.0% Other Ingredients

92.0% Trichloro-S-triazinetrione

ACTIVE INGREDIENT:

See back panel for other precautions.
Pool may be used 15 minutes after adding this product only when chlorine level is at or below 3 ppm.

*During Super Chlorination*

Not use this product when the chlorine residual has dropped to 2 ppm.

Advantages:
- Super chlorination is the pool with 1.5 to 2.0 ppm residuals of pool water every 1 to 3 days. Do not use this product when the chlorine residual has dropped to 3 ppm.

For best results:
- Use 1 to 2 gallons of Super Shock Quick per 2,000 gallons of pool water every week.
- Use 3 or 4 drops (minimum) of Super Shock Quick per 10,000 gallons of pool water once a week. Super chlorination is complete when a pH drop of 0.5 ppm is observed in the pool and the pH is less than 7.2.
- Use 1 cup (16 fluid oz) of Super Shock Quick per 2,000 gallons of water.

**Weekly Use:**

1. Check the pH of the pool water daily, adding sodium bisulfate (AquaGuard pH Down) as necessary to maintain the pH at 7.2. If the pH rises above 7.2, add acid to lower it to 7.2.

2. Add Super Shock Quick as needed to maintain the pH within the desired range. Super chlorination should be performed once a week to keep the pool clean and clear.

**Daily Use:**

Regularly check chlorine residual with a test kit. If the pH level is low, add Super Shock Quick as needed to maintain the pH within the desired range. Super chlorination should be performed once a week to keep the pool clean and clear.

**Note:** 1.5 to 2.0 ppm of this compound per 10,000 gallons of pool water will increase in existing chlorine."
