DISCARD clothing and other absorbent materials that have been contaminated with FULLCROM’s concentrate. Do not re-use them. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Koo and wash PPE separately from other laundry.

**User Safety Recommendations**

Users should:
- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling FULLCROM. Wash outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

**ENVIRONMENTAL HAZARDS**

This pesticide is toxic to fish and aquatic invertebrates. Do not apply directly to water or to areas where surface water is present, or to intertidal areas below the mean high water mark. drift and runoff from treated areas may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwater or rinsate.

**DIRECTIONS FOR USE**

It is a violation of Federal Law to use FULLCROM in a manner inconsistent with its labeling. Do not apply FULLCROM in a way that will contact workers or other persons, either directly or through drift. Only protect handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

**AGRICULTURAL USE REQUIREMENTS**

Use FULLCROM only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 190. The Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific statements on the label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of FULLCROM that are covered by the Worker Protection Standard.

PPE required for entry into treated areas during the restricted entry interval (REI) of 72 hours, is:
- Coveralls or overalls directly over shirt and short pants, or long sleeves and long pants.
- Chemical-resistant gloves, such as barrier laminate or viton ≥ 14 mils,
- Chemical-resistant coveralls or overalls.

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 190). This WP applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses.

Keep unprotected persons out of treated areas until sprays have dried.

**CHEMIGATION**

California Only: Do not apply FULLCROM through any type of irrigation system. See the product label for instructions. Only apply FULLCROM through overhead irrigation at rates stated in this label to provide proper coverage of all surfaces when treating for fungus, grass and shrub flies. Overhead irrigation systems include overhead sprinklers such as impact or microsprinklers, mist type irrigation such as fog systems and hand-held calibrated irrigation equipment such as hand-held wands with injector. Do not apply FULLCROM through any other type of irrigation system.

Plant injury or loss of effectiveness, or illegal pesticide residues in a crop, can result from non-uniform distribution of treated water.

If you have questions about calibration, contact a State Extension Specialist, equipment manufacturer or other expert.

Do not connect an irrigation system (including greenhouse systems) used for pesticide applications to a public water system unless the pesticide label prescribes safety devices for public water systems are in place.

A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down to make necessary adjustments should the need arise.

**Operation Instructions:**

1. The system must contain a functional check valve, vacuum relief valve, and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.

2. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank while the irrigation system is either automatically or manually shut down.

4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

5. The irrigation line or water pump line must contain a functional pressure switch, which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump), effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
7. Do not apply when wind speed favors drift beyond the area intended for treatment. Avoid spray overlap, as injury may result.

Prevent a minimum mixture of 1 gallon of water with the desired rate of FULLCIRON and inject mixture into the system. Injecting a larger volume of a more dilute mixture will usually provide a more accurate application of the metering equipment. Maintain sufficient agitation to keep product in suspension. Meter into irrigation water during the beginning of the irrigation cycle. It is important to continue running the system after the application is finished to remove all product from the tubing and into areas where the immature insects are located.

Systems Connected to Public Water Systems:

1. Public water system means a system for the provision to the public of piped water for human consumption if such system has at least fifteen service connections or regular serves an average of at least 25 individual users at least 60 days out of the year.

2. Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, back flow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the flow outlet of the RPZ pipe and the top of the overflow (m) of the reservoir tank of at least twice the inside diameter of the RPZ pipe.

3. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

4. The pesticide injection pipeline must contain a functional, normally closed, automated-opened valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

5. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump's motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.

6. Systems must use a metering pump, such as a positive displacement injection pump or gas dosing pumps or other effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

7. Do not apply when wind speed favors drift beyond the area intended for treatment.

PRODUCT INFORMATION

Use FULLCIRON to control whiteflies, scale, mealybugs, and soft scale on ornamental shrubs, ornamental plants, flowering plants, fruiting plants, ground covers, ornamental trees, and non-bearing fruit tree nuts and vine. FULLCIRON is both a contact and injection pesticide. While FULLCIRON does not control adult insects, it negatively affects development of viable eggs. FULLCIRON controls eggs, nymphs, larvae, and pupae by inhibiting their growth. Since the activity of this insecticide depends on the insect's growth and development, control may appear slower than with other contact insecticides, especially when treating later insect growth stages.

FULLCIRON also penetrates the leaf surface of several ornamental plants; it is, therefore, active to the insect when feeding on plant tissue. While adequate coverage is always required, FULLCIRON provides effective control in instances when complete coverage of underside of leaves has not been achieved.

RESISTANCE MANAGEMENT

For resistance management purposes, FULLCIRON is a Group 7C insecticide. Any insect population may contain individuals naturally resistant to FULLCIRON and other Group 7C insecticides. The resistant individuals dominate the insect population if these-insecticides are used repeatedly. These resistant insects may not be controlled by FULLCIRON or other Group 7C insecticides although such experts should be consulted for local resistance recommendations. The Group 7C classification scheme is based on the insect growth regulator (IGR) mode of action of pyriproxifen. It is recognized that resistance of insects and females to insecticides and acaricides can also result from enhanced metabolism, reduced penetration or behavioral changes that are not linked to any site of action classification but are specific to individual chemicals or chemical groups. Despite this, selection of chemicals from different chemical classes remains a viable management technique.

To delay insecticide resistance:

- Avoid exclusive repeated use of insecticides from the same chemical subgroup.
- Integrate other control methods (chemicals, cultural, biological) into insect control programs.
- Follow local, state, and federal Integrated Pest Management (IPM) and insecticide Resistance Management (IRM) recommendations.

For further information contact your local Pest Control Advisor (PCA).

PLANT TOLERANCE

The large number of existing ornamental varieties and cultivars cuped with the containing introduction of new varieties makes it impossible to list FULLCIRON in every location and under every condition where sold or in all of the combinations created by these differences. These differences include the soil or media type, pH, moisture or fertility, environmental conditions such as temperature, lighting or light intensity, and horticultural practices and the manner of use and application of FULLCIRON.

Make sure FULLCIRON is compatible with the variety or cultivar under your specific conditions by testing it on a limited scale and observe for phytotoxicity for two weeks before making large scale applications.
MIXING INSTRUCTIONS
Mix only enough spray mixture that is needed for the application. Careful spray equipment is used to mix the product. Add in the following order:
1. 1/2 to 3/1 required amount of water
2. Required amount of product
3. Remainder of water
Mix until complete dispersion prior to application. Rinse spray equipment with clean water after each use.

*Determine the rate/100 gallons from rate table below. Follow the proper rate across the row to determine how much to add for maximum results less than 100 gallons.

COMPATIBILITY
FULCRUM can be used with most insecticides, fungicides and spray adjuvants. When tank mixed with FULCRUM, follow all precautions and restrictions on the label of the other product. When products are being used in a tank mixture for the first time, treat a small number of plants for 2 to 4 weeks and check for injury. If no injury is observed, proceed with planned applications.

LOW VOLUME SYSTEMS
FULCRUM has been shown to be effective for foliar applications when applied through Electrostatic Spraying Systems, PointFog®Systems or other low volume systems. To calibrate the amount of product to be applied, use the appropriate rate of product for the square footage to be treated with spray as listed. The amount of water is dependent on the amount needed for a variety of factors. Do not use low volume systems to control soil-inhabiting insects such as scale, soft scale, and mealy bugs.

SHRUBS, ORNAMENTALS, FLOWERING PLANTS, FOLIAGE PLANTS, GROUND COVERS, ORNAMENTAL TREES, NON-BEARING FRUIT, NUT TREES, AND VINES.

NOTE: Do not apply to Salsola (Salsola spp.), Chokecherry (Prunus spinosa var. spinosa), Boston Fern (Nephrolepis exaltata), Schefflera (Schefflera spp.), Geranium (Geranium spp.), and Coral Bells (Heuchera sanguinea) due to observed injury.

CONDITION OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

NOTICE: Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using FULCRUM. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions for Use of FULCRUM must be followed carefully. It is impossible to eliminate all risks inherently associated with the use of FULCRUM. Nevertheless or other unintended consequences may result because of such factors as manner of use or application, weather, presence of other materials or other influencing factors in the use of the product, which are beyond the control of OHP, Inc. or Seller. To the extent consistent with applicable law, all such risks shall be assumed by Buyer and User, and Buyer and User agree to hold OHP, Inc. and Seller harmless for any claims resulting from such factors.

OHP, Inc. warrants that FULCRUM conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. This warranty does not extend to the use of FULCRUM contrary to label instructions, or under abnormal conditions or under conditions not reasonably foreseeable or beyond the control of Seller or OHP, Inc., and Buyer and User assume the risk of any such use. To the extent consistent with applicable law, OHP, Inc. MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER EXPRESS OR IMPLIED WARRANTY (EXCEPT AS STATED ABOVE). To the extent consistent with applicable law, neither OHP, Inc. or Seller shall be liable for any incidental, consequential or special damages resulting from the use or handling of FULCRUM. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF OHP, Inc. AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF FULCRUM, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF OHP, Inc. OR SELLER, THE REPLACEMENT OF THE PRODUCT. OHP, Inc. and Seller offer FULCRUM, and Buyer and User accept it, subject to the foregoing Conditions of Sale and Limitation of Warranty and Liability, which may not be modified except by written agreement signed by a duly authorized representative of OHP, Inc.

FULCRUM is a registered trademark of OHP, Inc.
**FULCRUM®**

**Brand Growth regulator**

**FOR CONTROL OF INSECTS ON SHRUBS, ORNAMENTALS, FLOWERING PLANTS, FOLIAGE PLANTS, GROUND COVERS, ORNAMENTAL TREES, AND NON-BEARING FRUIT, NUT TREES AND VINES.**

**ACTIVE INGREDIENT: By Wt.**

Pyrophyllite: 2 [(Methyl-2-4-phenylpyrrolyl) pyridine] 11.23%

**OTHER INGREDIENTS: 88.77%**

**TOTAL: 100.00%**

Contains 0.86 pound al per gallon.

Contains aromatic petroleum distillates.

**EPA Reg. No.: 59807-14**

**EPA Est. No.: 53863-TX-002**

**KEEP OUT OF REACH OF CHILDREN**

**CAUTION**

See attached booklet for First Aid, Precautionary Statements, and Directions for Use.

Produced for:

OHP, Inc.

PO Box 51230

Maitland, PA 19451

Net Contents:

1 Quart

(32 fl oz.)

(946 mL)

**FIRST AID**

**IF ON SKIN OR CLOTHING:** Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-30 minutes. Call a poison control center or doctor for treatment advice.

**IF IN EYES:** Hold eye open and rinse slowly and gently with plenty of water for 15-30 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing. Call a poison control center or doctor for treatment advice.

**IF SWALLOWED:** Call a poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give anything by mouth to an unconscious person.

**IF INHALED:** Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.

**HOT LINE NUMBER**

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-800-358-4647 for emergency medical treatment information.

**Note to Physicians:** If ingested, probably mucosal damage may contraindicate the use of gastric lavage. Do not induce vomiting as it can result in aspiration of the product, which can cause pneumonitis.

**PRECAUTIONARY STATEMENTS**

**HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

**CAUTION**

Causes skin and eye irritation. Do not get on skin, in eyes or on clothing. Harmful if ingested, swallowed or inhaled through skin. Avoid contact with skin, eyes or clothing. Avoid breathing vapor or spary mist. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash clothing before reuse.

**DIRECTIONS FOR USE**

It is a violation of Federal Law to use FULCRUM in a manner inconsistent with its labeling. Do not apply FULCRUM in a way that will contact workers or other persons, either directly or through drift. Only protect leaders may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

**STORAGE AND DISPOSAL**

Do not contaminate water, food, or feed by storage or disposal.

**PESTICIDE STORAGE:** Store in original container in a dry, temperature-controlled, secure place.

**PESTICIDE DISPOSAL:** Materials resulting from the use of FULCRUM may be deposited on an approved waste disposal facility.

**CONTAINER DISPOSAL:** Non-refillable container. Do not reuse or refill this container. Offer for recycling. If refilled, triple drain container or equivalent primary container before purifying. Triple drain in accordance. Empties remaining contents into application equipment or a free tank and cover for 10 seconds after the flow begins to stop. Add the container 1/4 full with water and recaps. Shake for 10 seconds. Pour residual into application equipment or a free tank or store in usable for later use or disposal. Drain for 10 seconds after the flow begins to stop. Repeat this procedure two more times.

See booklet accompanying this container for complete labeling including Environmental Hazards, Directions for Use, and Condition of Sale of Limited Warranty and Liability.
