DIRECTIONS FOR USE
This product raises total alkalinity in swimming pool water. If the total alkalinity is too low, pH will fluctuate excessively.

FOR THE BEST RESULTS: Keep the total alkalinity at 80-120 parts per million (ppm).
1. Use a reliable test kit to measure the total alkalinity concentration of your pool water.
2. If the alkalinity is below 80 parts per million (ppm), add this product. Place in the deep end of the pool.
3. Use charts shown to determine the correct amount of this product to use.

IF TOTAL ALKALINITY IS TOO HIGH: pH will not adjust easily. This may cause cloudy water or scale to develop. To lower total alkalinity, add pH DECREASER. Follow label directions on that product.
