other manufacturing plants. In such systems, it is employed as a replacement for or supplement to the Office of the EPA.

For guidance contact your State Water Board or Regional Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Non-Refillable Greater Than 5 Gallons

INDUSTRIAL AIR WASHING SYSTEMS: BC-177 is used to control bacteria in industrial air washing systems that maintain effective mist eliminators. Contaminants are scrubbed into the water by the mist eliminators to a final rinse fluid concentration of 3.33 to 5.56 fluid ounces per 1,000 gallons of water. Repeat initial dosage until control is evident. Make subsequent slug additions of 2.25 to 5.56 fluid ounces of BC-177 per 1,000 gallons of water each 5 to 7 days, or as needed. The subsequent slug dosage depends upon the relative amount of bleedoff and severity of the bacterial problem. Make slug additions in the sum of water cooling towers.

HOT LINE NUMBER

- Do not fish or feed fish in the treated area.
- Do not discharge the algaecide into lakes, streams, ponds, estuaries, oceans or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
- Do not discharge effluent containing the algaecide into septic tanks, sewage treatment plants, or any other wastewater or receiving waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge.
