**ACTIVE INGREDIENT:**

- Sodium dichloroisocyanurate: 48.21%

**OTHER INGREDIENTS:**

- Sodium hypochlorite: 51.79%

**TOTAL:** 100.00%

---

**KEEP OUT OF REACH OF CHILDREN DANGER**

See side panels for additional precautionary statements.

**PRECAUTIONARY STATEMENTS**

- **Hazard Class:** Harmful to aquatic life with long-term effects.
- **Category:** Small quantities of residues may be harmful to aquatic life. II. **Exposure routes:** Skin, eyes, ingestion.
- **Inhalation:** Harmful. Avoid breathing dust or fumes. Use personal protective equipment when handling in large quantities. Inhalation: Get fresh air. If breathing is difficult, call a doctor.
- **Skin:** Use appropriate protective clothing. Avoid contact with skin. Skin irritation: Wash thoroughly with soap and water. If irritation continues, seek medical advice immediately.
- **Eye:** Avoid contact with eyes. Irritated eyes: Wash thoroughly with water. If irritation continues, seek medical advice immediately.
- **Ingestion:** Do not induce vomiting. If swallowed, call a doctor immediately.

**FIRST AID:**

- **IF IN EYES:** Hold eye open and rinse slowly with water for 15-20 minutes. Remove contact lenses, if present, after the last 5 minutes. Then continue rinsing. Call a poison control center or doctor for treatment advice.
- **IF SWALLOWED:** Call a poison control center or doctor for treatment advice. If on skin: Rinse skin thoroughly with water for at least 15 minutes. Avoid breathing dust or fumes. If on CLOTHES: Remove all contaminated clothing. Wear appropriate protective clothing. Wear gloves and protective eyewear.
- **IF INHALED:** Get fresh air. If breathing is difficult, call a doctor.

---

**DIRECTIONS FOR USE**

Apply the product in a manner consistent with its labeling. Read the entire label and use strictly in accordance with precautionary statements and directions.

**BruTab 6S** is designed to act as a healthcare disinfectant for large area disinfection, especially in hospitals and institutions, when used at a level of 1:1000 in available chlorine disinfectant solution.

**NOTICE TO USER:** This product is not to be used as a terminal high-level disinfectant on any surface or instrument that has been exposed to blood or other body fluids. BruTab 6S is used as a surface disinfectant on a variety of surfaces, including but not limited to, hard, non-porous, inanimate surfaces. BruTab 6S is designed to be used as a cleaning and disinfection agent for use in hospitals and institutions. BruTab 6S is not recommended for use on blood or body fluids. The product must be used in accordance with the directions for use provided in the product label.

**APPLICATIONS:**

- **Hospitals,** nursing homes, long-term care facilities, and dental offices and clinics, operating rooms, isolation wards, and medical research facilities.
- **Day care centers and nurseries,** veterinary clinics, animal shelters, kennels, breeding and grooming establishments, pet control quarters, zoos, pet shops, and other animal care facilities.

**BruTab 6S is a disinfectant that is effective against bloodborne pathogens, non-porous, inanimate, non-porous, inanimate surfaces. This cleaning process may be accomplished with any cleaning solution, including BruTab 6S.**

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read the entire label and use strictly in accordance with precautions and directions.

BruTab 6S is a hospital Use Disinfectant, General Healthcare disinfectant (479ppm available chlorine disinfectant solution effective against gram positive and gram negative bacteria (Staphylococcus aureus, Pseudomonas aeruginosa and salmonella enterica) and Cold and flu viruses (respiratory syncytial virus, influenza H1N1).

BruTab 6S is also effective as a general purpose household disinfectant when contaminated with C. Diff spores when used at a level of 1988ppm available chlorine disinfectant solution.

Notice to User: This product is not to be used as a terminal sterilant/high level disinfectant on any surface or any part of the human body, either in or on contact with the blood stream or normally sterile areas of the body, or (2) contacts intact mucous membranes but which does not ordinarily penetrate the blood barrier or otherwise enter normally sterile areas of the body. This product is not to be used on visibly clean or decontaminated critical or semi-critical medical devices prior to sterilization or high level disinfection.

GENERAL DISINFECTION

BruTab 6S is a general disinfectant at 479ppm available chlorine disinfectant solution effective against staphylococcus aureus, salmonella enterica, pseudomonas aeruginosa and cold and flu (respiratory syncytial virus, influenza H1N1). Prepare a 479ppm solution (refer to Dilution Chart). Clean surface then apply solution with mop, cloth, sponge, brush, wipe, foaming agent, or coarse trigger sprayer. Allow surface to remain wet for 10 minutes. Allow to air dry. Prepare a fresh solution daily when using open containers (spray bottles). Prepare a fresh solution daily when using open containers (buckets) or if solution becomes diluted. All treated equipment that will contact food, feed, or drinking water must be rinsed with potable water before reuse.

DISINFECTANT/VIRUCIDAL DIRECTIONS:

Prepare a 959ppm solution (refer to Dilution Chart). Apply use solution to visible cleaned, hard, non-porous, inanimate surfaces with brush, spray device, sponge, cloth, or mop to wet and allow to dry thoroughly. Allow to remain wet for 10 minutes, then remove product by wiping with brush, sponge, or cloth. For vapor applications use a coarse spray device. Spray 6-8 inches from surface, and rub with brush, sponge, wipe, or cloth. Do not breathe spray steam, fog or mist. Before using this product, food and water sources must be removed from the room or carefully protected. Prepare a fresh solution weekly when using closed containers (spray bottles). Prepare a fresh solution daily when using open containers (buckets) or if solution becomes diluted. All treated equipment that will contact food, feed, or drinking water must be rinsed with potable water before reuse.

Kills H1N1, Hepatitis B, and Hepatitis B viruses on VISIBLY CLEANED ENVIRONMENTAL SURFACES/OBJECTS PRIOR TO EXPOSURE. SITES OF BLOOD/BODY FLUIDS in health care settings or other settings in which there is an expected likelihood of soiling of inanimate surfaces/objects with body or body fluids, and in which the surfaces/objects likely to be soiled by blood or body fluids may be contaminated with potential for transmission of human immunodeficiency virus Type 1 (HIV-1) (associated with AIDS), Hepatitis A virus, and Hepatitis B virus.

SPECIAL INSTRUCTIONS FOR CLEANING AND DECONTAMINATION AGAINST HIV-1 OF SURFACES/OBJECTS SOILED WITH BLOOD/BODY FLUIDS:

PERSONAL PROTECTION: Specific barrier protection items to be used when handling items soiled with blood or body fluids are disposable latex, nitrile, or vinyl gloves, masks, and eye coverings. CLEANING PROCEDURE: Blood and body other fluids must be thoroughly cleaned from surfaces and objects before application of BruTab 6S. This cleaning process must be accompanied with a disinfecting solution including BruTab 6S. DISPOSAL OF INFECTIOUS MATERIALS: Blood and other body fluids should be autoclaved and disposed of according to federal, state, and local regulations for infectious waste disposal. CONTACT TIME: Leave surfaces wet for 10 minutes.

ANIMAL PATHOGENS:

When used at 959ppm solution, applied as outlined under Disinfectant/Virucidal Directions, BruTab 6S is effective against the following animal pathogens: Feclis Calicivirus, Norovirus, Canine Distemper virus, Infectious Canine hepatitis, Poxvirus/Taftian disease, Avian Influenza, Porcine parovirus, Rotting & Stunting virus (tenosynovitis). Anabinobius pleuropneumoniae, Bordetella bronchiseptica (huminis), Brachyspira (Treponema/Neoplarina) hygrotonis (swine dysentery), Cuminum disease, Streptococcus uberis, Streptococcus dysgalactiae, and Clostridium penetrings USDA with a 10 minute contact time. For Trasmissible gastroenteritis (TGE), Swine Vascular disease, African swine fever. Hog cholera/Classical swine fever and Aflatox (fowl pox), a 30 minute contact time is required. Reapply product as necessary to ensure surface remains free of visible soiling.

SPECIAL INSTRUCTIONS FOR CLEANING AND DECONTAMINATION IN ANIMAL HOUSING FACILITIES:

1. Remove all animals and feed from premises, vehicles, and enclosures.
2. Remove all litter and manure from floors, walls and surfaces of barns, pens, stalls, chutes, and other facilities and fixtures occupied or traversed by animals.
3. Empty all troughs, rakes, and other feeding and watering appliances.
4. Thoroughly clean all surfaces with detergent and rinse with water.
5. Saturate all surfaces with 959 ppm available chlorine disinfecting solution for a period of 10 minutes.
6. Rinse all hatches, ropes, and other types of equipment used in handling and restraining animals, as well as forks, shovels, and scrapers used for cleaning litter and manure.
7. Ventilate buildings, cars, boats, and other closed spaces. Do not house livestock or other farm equipment until treatment has been absorbed, set, or dried.
8. Thoroughly scrub all treated feed racks, mangers, troughs, automatic feeders, fountains, and washers with soap or detergent, and rinse with potable water before reuse.

DISINFECTING FOR SURFACES CONTAMINATED WITH CLOSTRIDIUM DIFFICILE  
Special Label Instructions for Cleaning Prior to Disinfection against Clostridium difficile spores.  
Personal Protection: Wear appropriate barrier protection such as gloves, gowns, masks or eye covering.  
Cleaning Procedure: Fecal matter/waste must be thoroughly cleaned from surfaces/objects before disinfection by application with a clean cloth, mop, or sponge saturated with the disinfectant product. Cleaning is to include vigorous wiping and scrubbing, until all visible soil is removed. Special attention is needed for high-touch surfaces. Surfaces in patient rooms are to be cleaned in an appropriate manner, such as from right to left or left to right, on horizontal surfaces, and top to bottom, on vertical surfaces, to minimize spreading of the spores. Restrooms are to be cleaned last. Do not reuse soiled cloths.  
Infectious Materials Disposal: Materials used in the cleaning process that may contain feces/wastes are to be disposed of immediately in accordance with local regulations for infectious materials disposal.  
Prepare a 1988ppm solution; (refer to Dilution Chart). Cleanse surface then apply solution with mop, cloth, sponge, brush, wipe, foaming equipment, or coarse trigger sprayer. Allow surface to remain wet for 10 minutes. Allow to air dry. Prepare a fresh solution weekly when using closed containers (spray bottles). Prepare a fresh solution daily when using open containers (buckets) if solution becomes diluted. Allow treated equipment that will contact food, feed, or drinking water must be rinsed with potable water before re-use.  
To Pre-clean Instruments Prior to Terminal Sterilization/High Level Disinfection  
Prepare a 1988ppm solution. As a pre-cleaning spray. Place instruments into a suitable container, spray BruTab 65 onto instruments to thoroughly wet all surfaces. Let stand for up to 10 minutes. Rinse instruments.  
As a pre-cleaning immersion solution - Fill appropriate size container with a sufficient amount of BruTab 65 to completely submerge instruments, Place instruments into the container with BruTab 65 solution, and allow to remain for up to 10 minutes. Remove and rinse and follow with an appropriate cleaning and disinfesting process, Change solution daily.  
As a manual instrument cleaner - Thoroughly pre-rinse dirty instruments under running water to remove visible gross debris. Immerse pre-rinsed instruments into an appropriate size container filled with BruTab 65. Scrub instruments using a stiff bristle brush until visibly clean. Submerge instruments while scrubbing. Rinse instruments thoroughly. Change solution daily. Follow with an appropriate disinfection process. Cleaning of critical and semi-critical devices must be followed by an appropriate terminal sterilization/high level disinfection process.  
To Disinfect Non-Critical Pre-Cleaned Instruments - Instruments must be thoroughly pre-cleaned to remove excess organic debris rinsed and rough dried. Clean and rinse lumens of hollow instruments before filling with BruTab 65 or by immersion. Immersion method using a soaking tray immerses instruments into BruTab 65 and let stand for one or one minute. Change solution for each use. Spray method - Spray all surfaces of instruments with BruTab 65 until thoroughly wet. Let stand for one or one minute. Change solution for each use.  
SANITIZER FOR FOOD AND BEVERAGE PROCESSING AND FOOD HANDLING OPERATIONS  
Prepare a 100ppm solution; refer to dilution chart for the number of tablets to use. Prepare fresh solution only when using closed containers (spray bottles). Prepare a fresh solution daily when using open containers (buckets) if solution becomes diluted. All treated equipment that will contact food, feed, or drinking water must be rinsed with potable water before re-use.  
This product is recommended for sanitizing all types of hard, non-porous equipment and utensils used in food processing and canning plants, bottling plants, breweries, fish processing plants, meat and poultry processing plants, milk handling and processing plants, stores, restaurant and institutional dining establishments. Use a 100 ppm available chlorine solution (refer to Dilution Chart) to sanitize previously cleaned processing and packaging equipment. Allow at least one minute contact time before draining. Allow adequate draining before contact with beverages.  
SANITIZING HARD, NON-POROUS SURFACES, DISHES, GLASSES, FOOD PROCESSING EQUIPMENT AND UTENSILS, DAIRY AND BREWERY EQUIPMENT AND UTENSILS  
Prepare a 100ppm solution; refer to dilution chart for the number of tablets to use. Prepare a fresh solution weekly when using closed containers (spray bottles). Prepare a fresh solution daily when using open containers (buckets) if solution becomes diluted. All treated equipment that will contact food, feed, or drinking water must be rinsed with water before re-use.  
This product is an effective sanitizing agent. Treatment with this product throughout food and beverage processing and food handling operations can help ensure the quality and safety of the final product, HANDWASHING OF ITEMS  
1. Remove all gross food particles and soil by a preflush or prescraping and, when necessary, presoak treatment. Wash surfaces or objects with a good detergent or compatible cleaner, followed by a potable water rinse before application of the sanitizing solution.  
2. Prepare a 100 ppm available chlorine sanitizing solution (refer to Dilution Chart).  
3. Place equipment, utensils, dishes, glasses, etc. in the solution or apply the use solution to surfaces using a cloth, sponge, or coarse sprayer.  
4. Allow to stand at least one minute, drain the excess solution from the surface, and allow to air dry.  
5. Fresh sanitizing solution must be prepared at least daily or more often if the solution becomes diluted or soiled.  
MACHINE WASHING OF ITEMS  
1. Remove all gross food particles and soil by a preflush or prescraping and, when necessary, presoak treatment. Wash surfaces or objects with a good detergent or compatible cleaner, followed by a potable water rinse before application of the sanitizing solution.  
2. Prepare a 100 ppm available chlorine solution (refer to Dilution Chart).  
3. Add the solution to the feed tank of immersion or spray type machines that can provide at least one minute contact time for sanitizing dishes, glasses, food processing equipment, or utensils. Allow to drain and air dry before use.  
4. Promptly use the sanitizing solution. Prepared solutions cannot be reused for sanitizing but may be used for other purposes, such as cleaning.  
SHOE AND BOOT BATH SANITIZER  
To prevent cross contamination into treated animal areas and the packaging and storage areas of food plants. Shoe and boot bathing contains one inch of freshly made 100 ppm available chlorine (refer to Dilution Chart) should be placed at all entrances to buildings, hatcheries, and at all entrances to the production and packaging rooms. Scrape waterproof shoes and boots and place into solution for at least one minute prior to entering area. Change the sanitizing solution in the bath at least daily or sooner if solution appears diluted or dirty.  
MILK HANDLING AND PROCESSING EQUIPMENT  
This product can be used on dairy farms and in plants processing milk, cream, ice cream, and cheese. Rinse milking machines, utensils, and all equipment with cold water to remove excess milk. Clean and rinse prior to sanitizing. To sanitize, spray or rinse all visibly cleaned surfaces with 100 ppm available chlorine solution (refer to Dilution Chart). Allow adequate draining before contact with dairy products.  
It is important to clean out large deposits of milk or other organic matter before sanitizing. A sharp decline in the available chlorine content of the sanitizer following circulation through milk processing equipment is usually regarded as evidence of inadequate cleaning of the equipment and should be promptly investigated.  
SANITIZING APPLICATION METHODS  
Prepare a 100ppm solution; refer to dilution chart for the number of tablets to use. Prepare a fresh solution weekly when using closed containers (spray bottles). Prepare a fresh solution daily when using open containers (buckets) if solution becomes diluted. All treated equipment that will contact food, feed, or drinking water must be rinsed with potable water before re-use. Freshly prepare all sanitizing solutions. Test solutions during use to ensure the concentration does not drop below the recommended level. Keep in properly labeled containers to protect against contamination. Discard unused solutions.  
SPRAY METHOD OF SANITIZING EQUIPMENT  
The spray (or fog) method is generally used to sanitize large, non-porous surfaces that have already been freed of physical soil. It is appropriate for batch pasteurizers, holding tanks, weigh tanks, tank trucks and cars, vats, wine cellars, and floors. Clean all surfaces after use. Prepare a solution containing 100 ppm available chlorine (refer to Dilution Chart). Use pressure spraying or fogging equipment designed to resist chlorine-containing solutions (e.g. rubber-coated, plastic or stainless steel). When using any type of spraying equipment, always empty and thoroughly rinse the spraying equipment with potable water immediately after treatment. Apply spray or fog heavily to all surfaces the product will touch. Thorougly spray (or fog) all treated surfaces, corners and turns in between. Allow at least one minute contact time before draining. Allow excess solution to drain and air dry then place in service. Vacate area for at least two hours.  
GENERAL RINSE METHOD  
Prepare a solution containing 100 ppm available chlorine (refer to Dilution Chart) sanitize plant floors, walls and ceilings, and also control odors in refrigerated areas and drain containers. Generously flush or wash surfaces with the solution. After one minute contact time allow solution to drain and then air dry.  
STORAGE AND DISPOSAL  
Do not contaminate water, food, or feed by storage and disposal.  
PESTICIDE STORAGE: Store in a cool, dry, well-ventilated area at a temperature below 40°F/10°C. Avoid moisture getting into container.  
PESTICIDE DISPOSAL: Pesticides may be acutely hazardous. Waste resulting from the use of this product must be disposed of on-site, or at an approved waste disposal facility.  
CONTAINER HANDLING: Non-refillable container. Do not reuse or refill this container. Offer for recycling if available or puncture and dispose of in a sanitary landfill.
