Condition of Sale and Warranty

The extent consistent with applicable law: (A) BASF makes no other warranties express or implied, including warranties of fitness for particular purpose or merchantability, (B) importer’s exclusive remedy and BASF’s and seller’s exclusive liability, whether in contract, tort, negligence, strict liability, or otherwise, shall be limited to repayment of the purchase price of the product, and (C) BASF and the seller disclaim any liability for consequential, incidental, special or indirect damages resulting from the use or handling of this product. BASF and the Seller offer this product, and the Buyer accepts it, subject to these Conditions of Sale and Warranty which may be varied only by agreement in writing executed by a duly authorized representative of BASF.

CRACK & CREVICE® TREATMENT

This product can be applied as spots or as a line along cracks and crevices. Gel Bait should be applied directly into cracks and crevices where insects reside. To apply gel, insert provided applicator straw into actuator. Apply gel in 3 to 6 mm diameter bead (0.25 to 0.50 g). Approximately 10 spots per 100 ft² are recommended for use under conditions with low to moderate infestation. For more severe infestations, approximately 20 spots per 100 ft² are recommended. Apply many spots in areas of roach traffic and suspected harbor. Numerous small application spots are preferable to fewer larger application spots. DO NOT reapply food preparation surfaces. DO NOT apply gel to areas that have been recently sprayed with a repellent insecticide. DO NOT use insecticide products over gel placements as this may make gel repellent and reduce its effectiveness. DO NOT store treatments in locations where routine cleaning might remove bait or transfer bait to food by improper or inefficient application. DO NOT store treatments in locations where routine cleaning might remove bait or transfer bait to food by improper or inefficient application. DO NOT store treatments in locations where routine cleaning might remove bait or transfer bait to food by improper or inefficient application. DO NOT store treatments in locations where routine cleaning might remove bait or transfer bait to food by improper or inefficient application.

DO NOT apply bait to food areas of food handling establishments. This treatment is intended for cracks and crevices where insects reside. To apply gel, insert provided applicator straw into actuator. Apply gel in 3 to 6 mm diameter bead (0.25 to 0.50 g). Approximately 10 spots per 100 ft² are recommended for use under conditions with low to moderate infestation. For more severe infestations, approximately 20 spots per 100 ft² are recommended. Numerous small applications are preferable to fewer larger applications. Bait should not be used in open areas or on surfaces where contamination of food or food handling equipment may occur. Reapply gel if previous applications are no longer visible or reinfection occurs.
