INSECTICIDAL PASTE

KILL AND REPELS FACE FLIES, HORN FLIES, STABLE FLIES, HOUSE FLIES, BLACK FLIES AND BOT FLIES ON HORSES AND FOALS.

ACTIVE INGREDIENTS:
* Permethrin ........................................................... 7.6%
** Piperonyl butoxide ............................................ 14.0%
*** N-Octyl bicycloheptene Dicarboximide ........... 21.0%

OTHER INGREDIENTS ............................................... 57.4%

TOTAL .................................................................. 100.0%

*Cis/Trans ratio: Min. 35% (=/-) cis and max. 65% (+/-) trans.
**Consists of butylcarbityl (6-propylpiperonyl) ether and other related compounds.
***MGK 264

EPA Reg. No. 47000-185 EPA Est. No. 47000-IA-01

KEEP OUT OF REACH OF CHILDREN CAUTION

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
DIRECTIONS FOR USE
CAUTION: Harmful if swallowed or absorbed through the skin. Avoid contact with skin, eyes or clothing. Do not contaminate food or livestock feed. Wash thoroughly with soap and water after handling.

ENVIRONMENTAL HAZARDS
This product is toxic to fish, birds and aquatic animals. Do not contaminate any body of water with this product by disposing of equipment or disposal of wastes.

PHYSICAL OR CHEMICAL HAZARDS
Do not use near food, feed or water sources.

APPLICATION RESTRICTIONS:
Do not use this product on horses intended for human food. Do not apply to a wet animal since the product will not adhere to moist surfaces. War Paint, once applied to the fur of the horse, cannot be reapplied. Therefore, it should not be used within one to two weeks of an event or show in which the horse’s coat would have an adverse effect on the horse’s appearance. As with any product certain individual horses may be sensitive to one or more of the ingredients in War Paint. If local irritation should occur, discontinue use. If irritation persists, discontinue use and consult a veterinarian.

PRODUCT INFORMATION
It requires very small amounts of War Paint to kill and repel flies. Small amounts of War Paint are placed on the horse only where flies tend to congregate. War Paint, when applied to the horse, attaches to the hair of the horse and slowly releases the insecticide over a period of weeks. Full body fly control does not usually occur until 2 to 3 days after application. The reason for this is that it takes time for the insecticide to be released onto the horse’s hair. Because War Paint is not only an insecticide, but also an effective repellent, you will notice that in the case of face fly activity, the repellent activity of the product will be apparent within hours if not immediately after application. After a period of one to two weeks, as the insecticide is released over the horse’s hair, you will find that War Paint becomes poisonous and will fall off the horse’s hair leaving no adverse effects on the horse’s appearance.

Full Body Fly Control
Adult Horses: For the treatment of pastured horses, it is recommended that a full body fly control application be applied as a single treatment. This should provide adequate fly control for approximately one week on pastured horses. Apply one (1) gram per square yard under each eye, two (2) grams on withers and two (2) grams on vats below the withers to 12 – gram area for a single treatment. DO NOT REPEAT TREATMENT FOR SEVEN (7) DAYS.

APPLICATION TECHNIQUES
FACE FLIES: Turn the applicator wheel 1/8 of a turn to place one (1) gram of War Paint on top of the applicator. Then while holding the applicator lengthwise, apply the under eye slide on the lower eyelid from corner to corner. Do not apply directly into the eyes. Make a 1 inch wide stripe along the entire lower lid from corner to corner. For maximum face fly control, it is very important to place the product around the inner corner of the eye where the top and bottom lids meet. To help the area where tearing occurs due to fly irritation and where face flies congregate to feed. Repeat the application to the other eye. A 1 – inch stripe under each eye will apply one (1) gram of War Paint to the face.

HORN FLEAS, BLACK FLEAS AND HOUSE FLEAS: Turn the applicator wheel 1/8 of a turn to place two (2) grams of War Paint on the top of the applicator. Then apply it in a 1 by 4 inch stripe under the horse’s mane on the withers. Place the product far enough up the withers so the product will not be under the saddle or blanket on the horse’s back.

STABLE FLEAS AND BOT FLEES: Apply at 1 by 4 inch. When on each leg. Turn the applicator wheel 1/8 of a turn to place 2 grams of War Paint on the top of the applicator. Then apply this material to the front of the horse’s leg for inches below the knee or hock. Touch the applicator to the spot to be treated and move the applicator in the narrow direction up the horse’s leg. Smooth out the material using the top of the applicator for 1 inch wide by 4 inch long stripe on each leg.

Bot Flies: To kill and repel bot flies during the egg laying season, War Paint should be applied over the bot eggs already on the horse. A four inch by one inch wide stripe should be painted over the area where the bot eggs are attached.

This should be done instead of applying War Paint at the front of the legs, since this application will also control stable flies that usually lay their eggs on the sides of the horse’s legs.

FOALS:
The same technique for applying War Paint can be used on foals, except that 1/8 of the adult amount should be used – 6 grams total. Since the foal’s eyes are smaller than adult horses, a one inch wide stripe under each eye of a foal will apply one (1) gram of War Paint under each eye. When applying to the foal’s wrinkles and legs, make the application stripe only 1 inch wide by 2 inches long instead of the 4 inch long stripe used on adult horses. This will insure that a fly will receive on half of the adult horse dose. Examine a full body application with 3 grams of War Paint on the leg at the site of the application.

CRACKY CONTROL:
For horses that are to be ridden and handled frequently, lesser amounts of War Paint should be applied more frequently. A better choice. Lesser amounts of War Paint applied disconcertly and prudently to the horse can provide more effective local fly control for several days to a week. If this technique is used remember not to apply more than 12 grams of War Paint to a horse in any 7 day period. See application technique and illustrations.

STORAGE AND DISPOSAL
Do not contaminate surface or ground water by disposal or disposal.

PESTICIDE STORAGE:
Store in a cool, dry and secure area. Store in original sealed container away from food or feed.

CONTAINER HANDLING:
Do not puncture or incinerate. Place in trash or offer for recycling if available. If puffed, call your local solid waste agency or 1-800-CLEANUP for disposal instructions.
