For use in aquatic sites including: ponds, lakes, reservoirs, rivers, streams, irrigation and drainage canals, laters and ditches, flooded rice fields, aquaculture, water features, water production and wastewater systems, livestock watering basins, potable water systems.

AquaTec Acrylic

store at 59°F (15°C)

Ingredients:

1.009.20 Hazards to Humans and Domestic Animals

Before buying or using this product, read Terms and Conditions of Use, Warranty, and PPE separately from other laundry. Discard clothing and other absorbent materials in the trash, not in the sewage system. Discard wipes; they are not for disposal in the sewage system.

Remove contaminated clothing, and wash affected skin areas with soap and water.

Store in a cool, dry place. Do not store in direct sunlight. Do not expose to temperatures exceeding 120°F for extended periods, as this may cause product degradation.

Precautions:

1.009.20 Use in Potable Water, Canals, Ditches, and Irrigation and Drainage Systems

For Use in Potable Water: Use as a treatment to control algae in potable water systems, including water supplies from lakes, rivers, streams, and ground water. Although most effective when applied to algae that has grown at concentrations of 0.01 to 0.4 ppm, this product also provides a residual effect for algae regrowth for up to 3 months.

For planktonic (suspended) algae and free-floating filamentous algae mats, use a concentration of 0.2 ppm of active ingredient in a 1 surface acre treatment area. For treatment of 100% coverage, add 0.2 pounds of this product per surface acre of water being treated. Use at least 0.375 pints of this product per 1,000 gallons of water being treated.

To optimize exposure and control, use a high-pressure spray application to break up and downwind edge of the application area by adjusting the path of the aircraft height consistent with efficacy and flight safety. Do not release spray at a height lower than 75% of the wingspan or 90% of the rotor blade diameter. Release spray at the lowest point in the targeted treated area.

Shig Application Method for Controlling Cyanobacteria

Determine the surface area (1 acre = 43,560 ft²) and average depth of treated area. Refer to chart below to determine the amount of product applicable.

1.009.20 Phosphorus, (suspended) algae and filamentous algae mats, use a concentration of 0.2 ppm of active ingredient in a 1 surface acre treatment area. For treatment of 100% coverage, add 0.2 pounds of this product per surface acre of water being treated. Use at least 0.375 pints of this product per 1,000 gallons of water being treated.

Do not release spray at a height lower than 75% of the wingspan or 90% of the rotor blade diameter. Release spray at the lowest point in the targeted treated area.

Shig Application Method for Controlling Cyanobacteria

Application Rate Calculations

The amount of product to be applied is determined by the concentration of 0.2 ppm of active ingredient in a 1 surface acre treatment area. For treatment of 100% coverage, add 0.2 pounds of this product per surface acre of water being treated. Use at least 0.375 pints of this product per 1,000 gallons of water being treated.

Sediment and Breeding Area Application

Due to the potential for surfacing, it is recommended that the product be applied only when there is little or no hazard for spray drift. If re-growth begins to appear or if seasonal control is desired, re-apply the product using the application rate shown above. Under the conditions stated above, the recommended application rates provide sufficient control of the target infestation (Starry Stonewort) for 3 months, depending on climate, water conditions, and water chemistry.

In case of large-scale spillage regarding this product, call INFOTRAC at 1-800-535-5053. If on skin

FIRST AID

If on skin

FIRST AID

First Aid for Ingestion

Do not enter or allow worker entry into treated areas during the restricted entry period, even if the treated area appears to be safe. Use appropriate personal protective equipment (PPE) and methods of application as designated on the product label.

1.009.20 Wastewater and Surface Water Treatments

Water flows through the following areas prior to discharge into surface waters:<br>Surface water: stream, lake, or pond<br>Surface water: river, stream, or creek<br>Surface water: reservoir, lake, or pond<br>Surface water: lake, pond, or reservoir

To determine the amount of product to be applied, calculate the volume of water to be treated.

Temperature Inversions can influence pesticide drift. The applicator must evaluate all factors and make appropriate adjustments when applying this product.

(e.g., ground, aerial, airblast) can influence pesticide drift. The applicator must evaluate all factors and make appropriate adjustments when applying this product.

For applications in waters destined for use as drinking water, those waters must receive soap and water after handling and before eating, drinking, chewing gum, using tobacco, or applying cosmetics or sunscreen. Ensure spray or granules do not drift onto non-target areas.

DO NOT

It is a violation of Federal Law to use this product in a manner inconsistent with its Terms and Conditions of Use, Warranty, and PPE separately from other laundry. Discard clothing and other absorbent materials in the trash, not in the sewage system. Discard wipes; they are not for disposal in the sewage system.

Nonrefillable Container (rigid, any size):

For long-term storage or for modes of application where product is to be applied from containers containing a restricted amount of product, this product is classified as a restricted-use pesticide. The user must comply with the terms and conditions of use, warranty, and PPE separately from other laundry. Discard clothing and other absorbent materials in the trash, not in the sewage system. Discard wipes; they are not for disposal in the sewage system.

Nonsolvent of aromatic (non-aromatic).

Do not use or mix this container. Contents may not be removed. Use for the duration of treatment only. Do not use or mix this container as a solvent.

For Use in Potable Water, Canals, Ditches, and Irrigation and Drainage Systems

Do not mix with pesticides except as directed on the product label. Read carefully each rainfall, and other meteorological factors, for the product. Use in areas where water treatment or filtration has not been performed.

Pesticides must be stored in a cool, dry place. Do not store pesticides in direct sunlight. Do not store pesticides in direct sunlight. Do not expose to temperatures exceeding 120°F for extended periods, as this may cause product degradation.
