Verdure-X-Herbicide

TO PREVENT ACCIDENTAL POISONING, NEVER PUT INTO FOOD, DRINK, OR
OTHER CONTAINERS, AND USE STRICTLY IN ACCORDANCE WITH ENTIRE LABEL.

Active Ingredient:
Diquat dibromide [6,7-dihydropidyrido (1,2-a:2',1'-c) pyrazinediium dibromide] ...................... 37.3%
Other Ingredients........................................................................................................................... 62.7%
Total .............................................................................................................................................. 100.0%

Contains 2 lbs. diquat cation per gal. (3.73 lbs. diquat dibromide per gal.)

EPA Reg. No. 74530-61 EPA Est. No. XXX-XX-XXX

KEEP OUT OF REACH OF CHILDREN WARNING

Si usted no entiende la etiqueta, busque a alguien que se la explique a usted en detalle.
(If you do not understand the label, find someone to explain it to you in detail.)

Read entire booklet before using this product.

Observe all Precautionary Statements, and carefully follow Directions for Use, Storage and Disposal.

Net Contents: 2.5 gal (9.46L)

Manufactured by:
HELM AGRO Inc. 4042 Park Oaks Blvd. • Suite 330 • Tampa, Florida 33610
FIRST AID

If on skin
- Take off contaminated clothing
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for further treatment advice.

If inhaled
- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.
- Call a poison control center or doctor for further treatment advice.

If swallowed
- Call a poison control center or doctor immediately for treatment advice.
- Have person sip glass of water if able to swallow.
- Do not induce vomiting unless told to by a poison control center or doctor.
- Do not give anything by mouth to an unconscious person.
- Call a poison control center or doctor for further treatment advice.

In eyes
- Hold eye open and rinse slowly and gently with water for 15-20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

NOTE TO PHYSICIAN
To be effective, treatment for diquat poisoning must begin IMMEDIATELY.

Treatment consists of binding diquat in the gut with suspensions of activated charcoal or bentonite clay, administration of cathartics to enhance elimination and removal from the blood by charcoal hemoperfusion or continuous hemodialysis.

HOT LINE NUMBER
For medical emergencies involving this product, call CHEMTREC 1-800-424-9300.
For chemical emergency: Spill, leak, fire, exposure, or accident, call CHEMTREC 1-800-424-9300.
Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

WARNING
Harmful if swallowed or inhaled. Causes skin irritation. Causes moderate eye irritation. Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals. Do not get on skin or on clothing. Avoid breathing dust, vapor, or spray mist. Avoid contact with eyes. Wear coveralls over short-sleeved shirt and short pants, socks, chemical-resistant footwear and chemical gloves. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove and wash contaminated clothing before reuse.

Personal Protective Equipment (PPE)
Some of the materials that are chemical-resistant to this product are listed below. If you want more options, follow the instruction for Category A on an EPA chemical-resistance category selection chart.

Mixers, Loaders, Applicators and other handlers must wear:
- Coveralls over short-sleeved shirt and short pants.
- Chemical-resistant gloves made of any waterproof material such as polyethylene or polyvinyl chloride
- Chemical-resistant footwear plus socks
- Protective eyewear
- Chemical-resistant headgear for overhead exposure
- Chemical-resistant apron when cleaning equipment, mixing, or loading
- Face shield when mixing or loading

Exception:
After this product has been diluted to 0.50% VERDURE-X-HERBICIDE or less in water (i.e., the labeled rate for some spot applications), applicators for AQUATIC SURFACE APPLICATIONS must, at a minimum, wear (Note - Mixers and Loaders for this application method must still wear the personal protective equipment (PPE) as described in the above section):
- Long-sleeved shirt and long pants
- Waterproof gloves
- Protective eyewear

Exception:
At a minimum, applicators for AQUATIC SUBSURFACE APPLICATIONS must wear (Note - Mixers and Loaders for this application method must still wear the personal protective equipment (PPE) as described in the above section):
- Short-sleeved shirt and short pants
- Waterproof gloves
- Chemical-resistant footwear plus socks

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product’s concentrate. Do not reuse them. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.
Engineering Control Statements:
Mixers and loaders supporting aerial applications are required to use closed systems. The closed system must be used in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 170.240(d)(4)). When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 170.240(d)(4-6)), the handler PPE requirements may be reduced or modified as specified in the WPS. Mixers, loaders, and applicators using closed systems who meet these requirements may wear: long-sleeved shirt and long pants; protective eyewear; waterproof gloves; shoes plus socks; and a chemical resistant apron when mixing, loading, or cleaning equipment. If handling tasks are performed from inside an enclosed cab or aircraft with enclosed cockpits that meet these requirements may wear long-sleeved shirt, long pants, shoes, and socks for the labeling-specified PPE. All labeling-specified PPE must be immediately available for use in an emergency. All applicable requirements as specified in 40 CFR 170.240(d)(4-6) must be followed.

User Safety Recommendations
Users should:
• Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
• Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS (Terrestrial and Aquatic Uses)
This pesticide is toxic to aquatic invertebrates. For Terrestrial Uses, do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment wash waters or rinsate. For Aquatic Uses, do not apply directly to water except as specified on this label. Treatment of dense weed areas may result in oxygen loss from decomposition of dead weeds. This loss of oxygen may cause fish suffocation. Therefore, treat only 1/3 to 1/2 of the water body area at one time, especially if dense areas of weeds and/or algae exist and wait 14 days between treatments.

Necessary approval and/or Permits should be obtained prior to application if required. Consult the responsible State Agencies (i.e., Fish and Game Agencies or Department of Natural Resources) before making applications to public waters.

PHYSICAL AND CHEMICAL HAZARDS
This product is mildly corrosive to aluminum and produces hydrogen gas which may form a highly combustible gas mixture. Do not mix or store in containers, spray tanks, nurse tanks, or such systems made of aluminum or having aluminum fittings. This product is compatible with high density polyethylene and rubber lines steel containers.

Do not mix or allow coming in contact with oxidizing agent. Chemical reaction may occur.

DIRECTIONS FOR USE
It is a violation of federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

READ ENTIRE LABEL. USE STRICTLY IN ACCORDANCE WITH PRECAUTIONARY STATEMENTS AND DIRECTIONS, AND WITH APPLICABLE STATE AND FEDERAL REGULATIONS.

DO NOT APPLY THIS PRODUCT THROUGH ANY TYPE OF IRRIGATION SYSTEM.

AGRICULTURAL USE REQUIREMENTS
Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 24 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:
• Coveralls over short-sleeved shirt and short pants
• Chemical-Resistant footwear plus socks
• Chemical-Resistant headgear for overhead exposure
• Protective eyewear
• Chemical Resistant Gloves made of any waterproof material
PRODUCT INFORMATION

VERDURE-X-HERBICIDE is a non-volatile herbicide for use as a pre-harvest aid to desiccate certain crops in order to facilitate harvesting. VERDURE-X-HERBICIDE is also recommended for use as a general herbicide to control weeds in non-bearing crops and in various non-crop areas including: commercial greenhouses and nurseries; ornamental seed crops (flowers, bulbs, etc. - except in the state of California); landscape, industrial, recreational, commercial, residential, and public areas; turf renovation (all turf areas except commercial sod farms); dormant established turfgrass (bermudagrass, zoysiagrass – nonfood or feed crop); and aquatic areas.

VERDURE-X-HERBICIDE is recommended for general weed control in commercial greenhouses (beneath benches), field grown and container stock, and other similar areas. VERDURE-X-HERBICIDE may be applied preplant or postplant preemergence in field grown ornamental nursery plantings or postemergence as a directed spray. VERDURE-X-HERBICIDE may also be applied preemergence in ornamental seed crops (except in the state of California). Avoid contact with desirable foliage as injury may occur.

VERDURE-X-HERBICIDE is a contact-type herbicide and requires actively growing green plant tissue to function. Thorough coverage of all green plant tissue is essential for effective control. VERDURE-X-HERBICIDE is rapidly absorbed by green plant tissue and interacts with the photosynthetic process to produce compounds which destroy plant cells. Herbicidal activity is usually quite rapid with effects visible in a few days. Weed plants should be succulent and actively growing for best results. Avoid spray drift to crops, ornamentals, and other desirable plants during application, as injury may result.

AGRICULTURAL USE DIRECTIONS

APPLICATION

Since VERDURE-X-HERBICIDE is a contact-type herbicide, it is essential to obtain complete coverage of the target weed or crop to achieve effective results. Improper application technique and/or application to large, stressed, or mowed weeds will generally result in unacceptable control. Complete coverage is also essential for effective performance in harvest aid applications. See details below for additional information.

Nozzle Selection

The use of flat fan nozzles will result in the most effective application of VERDURE-X-HERBICIDE. The use of nozzles other than flat fans may result in reduced performance due to inadequate coverage.

Spray Volume

Follow specified minimum spray volumes listed for each use of VERDURE-X-HERBICIDE. These are minimum volumes only, and spray volumes should be increased as necessary to obtain complete coverage of the target weed or plant without runoff from the foliage. When spraying less than 20 gals. of spray carrier per acre, target weeds should not exceed 6 inches in height.

SPRAY ADJUVANTS

Always Add One of the Following:

Nonionic Surfactant (NIS)

Add a NIS containing 75% or greater surface active agent at 0.06 to 0.5% v/v (1/2 to 4 pts. per 100 gals.) of the finished spray volume.

Other Adjuvants

Adjuvants other than NIS may be used providing the product meets the following criteria:
1. Contains only EPA exempt ingredients.
2. Is compatible in mixture. Compatibility may be established through a jar test.
3. Is supported locally for use with VERDURE-X-HERBICIDE through proven field trials and through university and extension recommendations.

RATES

Follow specified rates listed with each use of VERDURE-X-HERBICIDE. Use the higher label rates when weeds are large or dense. Also, use higher labeled rates for harvest aid when crop vegetation is dense.

APPLICATION TIMING

VERDURE-X-HERBICIDE should be applied to emerged weeds when they are small. Weeds 1 inch to 6 inches in height are the easiest to control. When weeds have been grazed or mowed, thus removing much of the green foliage, allow the weeds to regrow to a height of 2 to 4 inches before spraying. For proper application timing of harvest aid applications, refer to each crop for recommendations.

RAINFASTNESS

Because VERDURE-X-HERBICIDE is rapidly absorbed by green plant tissue, rain occurring 30 minutes after application will have no effect on activity of VERDURE-X-HERBICIDE.

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses. Keep all unprotected persons out of operating areas or vicinity where there may be drift. Do not allow people or pets to touch treated plants until the sprays have dried. For terrestrial uses, do not allow entry of maintenance workers into treated areas, or allow contact with treated vegetation wet with spray, dew, or rain, without appropriate protective clothing until spray has dried. For aquatic uses, do not enter treated areas while treatments are in progress.
ENVIRONMENTAL CONDITIONS
VERDURE-X-HERBICIDE is active over a wide range of environmental conditions. Cool weather (below 55°F) will slow the activity of VERDURE-X-HERBICIDE, as will cloudy, overcast weather, but will not affect performance. In dry areas, dust stirred up by high winds or equipment tires can coat target surface and reduce VERDURE-X-HERBICIDE activity. Avoid applying VERDURE-X-HERBICIDE in extremely dusty conditions.

SPRAY DRIFT MANAGEMENT
AVOIDING SPRAY DRIFT AT THE APPLICATION SITE IS THE RESPONSIBILITY OF THE APPLICATOR AND THE GROWER.
WHERE STATES HAVE MORE STRINGENT REGULATIONS, THEY SHOULD BE OBSERVED.

Agricultural Aerial Applications
1. Follow label directions to reduce the potential for drift incidents.
2. Do not make aerial applications within or above a surface temperature inversion to avoid unreasonable adverse effects. Applicators may determine presence of an inversion by noting the presence of ground fog, light variable wind, or layering of smoke and dust.
3. Applicators must estimate the prevailing wind speed and direction in the vicinity of the application site prior to and during the application. Measuring wind speed and the anemometer, observing wind speed and direction using an aircraft smoke release system or wind sock or wind vane, or obtaining a report from a representative meteorological station are acceptable methods of estimating wind speed and direction.
4. Apply when prevailing wind speed is 3 to 10 miles/hour.
5. When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft up wind. Swath adjustment distance should increase, with increasing drift potential (higher wind, smaller drops, etc.).
6. When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.
7. Many factors, including droplet size and equipment type, determine drift potential at any given speed. Drift reduction technology or other mitigation methods should be employed to reduce drift potential.
8. The boom length must not exceed 75% of the fixed wing span and must be located at least 8 to 10 inches below the trailing edge of the fixed wing; the boom length must not exceed 75% of the rotary blade.
9. Release spray at the optimum height from the aircraft for minimizing drift and maximizing deposition in the crop canopy. This height should be no more than 10 feet above the crop canopy unless necessary to ensure flight safety.
10. The boom must be shut off before the aircraft begins to climb at the edge of a field.
11. Apply with nozzles that deliver a coarse spray quality to provide sufficient coverage and control. Coarse spray quality nozzles reduce drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions. Orient nozzles so that the spray is released parallel to the airstream and produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential. Nozzles must be oriented backward and parallel to the airstream and never pointed downward more than 45 degrees. Use the minimum number of nozzles that provide uniform coverage. Use higher flow rate nozzles to apply the highest practical spray volume and do not exceed nozzle manufacturers’ recommended pressures.
12. The pesticide should only be applied when the wind is blowing away from adjacent sensitive areas (e.g. residential areas, bodies of water, known habitat for threatened or endangered species, and non-target crops).

Ground Applications
1. Follow label directions to reduce the potential for drift incidents.
2. Do not make ground applications within a surface temperature inversion when applying near an area requiring protection to avoid unreasonable adverse effects. Applicators may determine presence of an inversion by noting the presence of ground fog, light variable wind, or layering of smoke and dust.
3. Applicators must estimate the prevailing wind speed and direction in the vicinity of the application site prior to and during the application. Measuring wind speed and the anemometer, observing wind speed and direction using an aircraft smoke release system or wind sock or wind vane, or obtaining a report from a representative meteorological station are acceptable methods of estimating wind speed and direction.
4. Apply at the nozzle height that produces uniform coverage of the target
5. Apply when prevailing wind speed is 3 to 10 miles/hour.
6. When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the sprayer up wind. Swath adjustment distance should increase, with increasing drift potential (higher wind, smaller drops, etc.).
7. When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.
8. Many factors, including droplet size and equipment type, determine drift potential at any given speed. Drift reduction technology or other mitigation methods should be employed to reduce drift potential.
9. Use nozzles which deliver a coarser spray quality (droplet size spectrum) at application according to nozzle manufacturer, ASABE, or USDA classification.
10. The pesticide should only be applied when the wind is blowing away from adjacent sensitive areas (e.g. residential areas, bodies of water, known habitat for threatened or endangered species, and non-target crops.)
SPECIFIC USE INSTRUCTIONS

The following tables contain information on use patterns, rates, minimum spray volumes, pre-harvest intervals (PHI), and other precautions, restrictions and comments specific to each crop. Read and follow directions carefully.

<table>
<thead>
<tr>
<th>Crop</th>

| **Alfalfa** (seed crop only)              | Pre-harvest desiccation broadcast   | 1.5 - 2 pts. (see precautions section for additional rate information) | Ground: 15 gals.  Air: 5 gals.      | 3          | • On thin stands of seed alfalfa use 1 pt. per acre.  
  • Desiccation is complete in 3-10 days.  
  • Do not graze or feed treated forage to livestock.  
  • Do not use seed from treated plants for food, feed, or oil purposes. |
| **Canola**                                | Pre-harvest desiccation broadcast   | 1.5 - 2 pts.                        | Ground: 15 gals.  Air: 5 gals.      | 7          | • A maximum of one application per season is allowed.  
  • Harvest no later than 10 days after application. |
| **Carrots, Coriander, Radish & Turnips Grown for Seed (ID & WA Only)** | Pre-harvest desiccation broadcast   | 1.5 - 2 pts.                        | Ground: 15 to 30 gals.  Air: 5 gals. |            | • Apply 3 to 10 days before harvest prior to swathing when the majority of seed is harvest-ripe.  
  • Make only one application per crop. Do not apply more than 2 pts. (0.5 lb ai/acre) per year.  
  • No portion of seed carrot, coriander, radish, or turnip including but not limited to seed screenings, green chop, hay, chaff, combine tailings, pellets, meal, whole seed and cracked seed, may be grazed, used, or distributed for food or feed purposes.  
  • Apply only to crops grown for seed production for preharvest desiccation. Do not use on Daikon variety of radishes. |
| **Spinach & Table Beets Grown for Seed Only (WA Only)** | Pre-harvest desiccation broadcast   | 1.5 - 2 pts.                        | Ground: 15 to 30 gals.  Air: 5 gals. |            | • Apply 3 to 10 days before harvest prior to swathing when the majority of seed is harvest-ripe.  
  • Make only one application per crop. Do not apply more than 2 pts. (0.5 lb ai/acre) per year.  
  • No portion of spinach or table beets including but not limited to seed screenings, green chop, hay, chaff, combine tailings, pellets, meal, whole seed and cracked seed, may be grazed, used, or distributed for food or feed purposes.  
  • Apply only to crops grown for seed production for preharvest desiccation. |
| **Sugar Beets Grown for Seed Only (OR Only)** | Pre-harvest desiccation broadcast   | 1.5 - 2 pts.                        | Ground: 15 to 30 gals.  Air: 5 gals. |            | • Apply 3 to 10 days before harvest prior to swathing when the majority of seed is harvest-ripe.  
  • Make only one application per crop. Do not apply more than 2 pts. (0.5 lb ai/acre) per year.  
  • No portion of sugar beets including but not limited to seed screenings, green chop, hay, chaff, combine tailings, pellets, meal, whole seed and cracked seed, may be grazed, used, or distributed for food or feed purposes.  
  • Apply only to crops grown for seed production for preharvest desiccation. |

### SPECIFIC USE INSTRUCTIONS

<table>
<thead>
<tr>
<th>Other Uses</th>
<th>Use Pattern</th>
<th>VERDURE-X-HERBICIDE Rate</th>
<th>Minimum Total Spray Volume per Acre</th>
<th>Recommendations, Precautions, and Restrictions</th>
</tr>
</thead>
</table>
| Non-Crop or Non-planted Areas on Farms Including: Fence Lines, Farmyards, Farm Buildings, Fuel Storage Areas, Barrier Strips, Equipment Areas, and Dry (non-flooded) Areas around ponds, lakes, and drainage ditches on farm, Rights-of-ways including Railroads, Highways, Roads, Dividers and Medians, Pipelines, Public Utility Lines, Pumping Stations, Transformer Stations and Substations; Around Electric Utilities, Commercial Buildings, Manufacturing Plants, Storage Yards, Rail Yards, Fence Lines and Parkways | Broadcast | 1 - 2 pts per acre | 15 gals | • Apply for full coverage and thorough weed contact.  
• Retreatment may be necessary for complete control of grasses and other established weeds.  
• Avoid spray contact with foliage of food crops or ornamental plants or other desirable vegetation.  
• Add the labeled rate of 75% or greater nonionic surfactant to the finished spray volume. |
| | Spot Treatment | 1 - 2 quarts plus the labeled rate of 75% or greater non-ionic surfactant per 100 gals. of water or 0.75 oz. (22 mL) plus the labeled rate of a 75% or greater non-ionic surfactant per 1 gal. of water | 15 gals | |

### COMMERCIAL GREENHOUSES AND NURSERIES

For general weed control in commercial greenhouses (beneath benches), field grown and container stock, and other similar areas, VERDURE-X-HERBICIDE may be applied preplant, or postplant preemergence in field grown ornamental nursery plantings or postemergence as a directed spray. VERDURE-X-HERBICIDE may also be applied preemergence in ornamental seed crops (except in the state of California). Avoid contact with desirable foliage as injury may occur. Do not use on food or feed crops.

</table>
| ORNAMENTAL SEED CROPS (FLOWERS, BULBS, ETC.) EXCEPT IN THE STATE OF CALIFORNIA | Preharvest desiccation and weed burndown - Broadcast | 1.5 - 2 pts. per acre | Ground: 15 gals.  
Air: 5 gals. | • Apply for full coverage and thorough weed contact.  
• Repeat as needed at no less than 5-day intervals up to three applications.  
• Add the labeled rate of 75% or greater nonionic surfactant per 100 gals. of spray mixture.  
• Do not use seed, screenings, or waste as feed or for consumption. |
DIRECTIONS FOR LANDSCAPE, INDUSTRIAL, RECREATIONAL, COMMERCIAL, RESIDENTIAL, AND PUBLIC AREAS

VERDURE-X-HERBICIDE is a nonselective herbicide and it will kill broadleaf and grassy weeds in industrial, recreational, golf course, commercial, residential, and public areas within 24-36 hours. Do not allow sprays to contact desirable plant foliage or injury may occur.

To be effective as a contact/desiccant herbicide, VERDURE-X-HERBICIDE must completely cover the target weeds. Best results are seen when VERDURE-X-HERBICIDE is applied to young, actively growing weeds. Do not apply to weeds that are growing under stress. Use the recommended application techniques for acceptable weed control.

For weeds that are difficult to control, such as perennials, or deeply-rooted weeds, control is often obtained by applications of VERDURE-X-HERBICIDE as a tank mix with other systemic-type herbicides. Read and follow the other product labels for specific application directions.

VERDURE-X-HERBICIDE, when applied as a tank mix with a preemergent herbicide labeled for the intended use site, will provide residual control. Before preparing large volume of a tank-mix of VERDURE-X-HERBICIDE with other herbicides, check that the tank-mix is physically compatible by mixing only a small amount of the tank mix. If the mixture balls up, forms flakes, sludges, jells, oily films or layers, or other precipitates form, do not use this combination: it is not compatible. Read and follow the other product labels for specific application directions.

It is not possible for Helm to test all possible tank mixtures of VERDURE-X-HERBICIDE with other pesticides for compatibility, efficacy, or other adverse effects. Helm recommends you consult your state experimental station, state university or extension agent before tank-mixing VERDURE-X-HERBICIDE with other herbicides.

Grounds maintenance weed control in public, commercial and residential landscapes, including landscape beds, lawns, golf courses and roadsides:

Apply VERDURE-X-HERBICIDE as a spot or broadcast spray to control weeds in listed sites or to control weeds around the edges and non-flooded portions of ponds, lakes and ditches.

Trim and Edge weed control along driveways, walkways, patios, cart paths, fence lines, and around trees, ornamental gardens, buildings, other structures, and beneath noncommercial greenhouse benches:

VERDURE-X-HERBICIDE can be used to eliminate undesired grass and broadleaf plant growth in narrow-banded areas along the areas listed. Since VERDURE-X-HERBICIDE does not translocate systemically, it can be used as an edging or pruning tool. VERDURE-X-HERBICIDE must be applied only to the select, narrow-banded areas of grass or undesirable weed growth found in desirable ornamental bedding plants, ground covers, etc. VERDURE-X-HERBICIDE will only control vegetation growing within the width of the spray application. Do not exceed the labeled rate of VERDURE-X-HERBICIDE or concrete-based materials will be stained.

Industrial weed control for right-of-ways, railroad beds/yards, highways, roads, dividers and medians, parking lots, pipelines, pumping stations, public utility lines, transformer stations and substations, electric utilities, storage yards, and other noncrop areas:

VERDURE-X-HERBICIDE can be used to eliminate undesired grass and broadleaf plant growth in narrow-banded areas along the areas listed. VERDURE-X-HERBICIDE covers, etc. VERDURE-X-HERBICIDE will only control vegetation growing within the width of the spray application. Do not exceed the labeled rate of VERDURE-X-HERBICIDE or concrete-based materials will be stained.

VERDURE-X-HERBICIDE can be used to eliminate undesired grass and broadleaf plant growth in narrow-banded areas along the areas listed. VERDURE-X-HERBICIDE covers, etc. VERDURE-X-HERBICIDE will only control vegetation growing within the width of the spray application. Do not exceed the labeled rate of VERDURE-X-HERBICIDE or concrete-based materials will be stained.

VERDURE-X-HERBICIDE can be used to eliminate undesired grass and broadleaf plant growth in narrow-banded areas along the areas listed. VERDURE-X-HERBICIDE covers, etc. VERDURE-X-HERBICIDE will only control vegetation growing within the width of the spray application. Do not exceed the labeled rate of VERDURE-X-HERBICIDE or concrete-based materials will be stained.

VERDURE-X-HERBICIDE can be used to eliminate undesired grass and broadleaf plant growth in narrow-banded areas along the areas listed. VERDURE-X-HERBICIDE covers, etc. VERDURE-X-HERBICIDE will only control vegetation growing within the width of the spray application. Do not exceed the labeled rate of VERDURE-X-HERBICIDE or concrete-based materials will be stained.

TURF RENOVATION (ALL TURF AREAS EXCEPT COMMERCIAL SOD FARMS)

VERDURE-X-HERBICIDE can be used to desiccate golf course turf and other turf areas prior to renovation. For suppression of regrowth and quick desiccation of treated turfgrass, use VERDURE-X-HERBICIDE as a tank mix with other systemic nonselective or systemic postemergence grassy weed herbicides. Before tank mixing with other products, read and follow the other product labels for specific application directions and restrictions.

Broadcast (Ground) Application: 1-2 pts. of VERDURE-X-HERBICIDE per acre plus a nonionic surfactant containing 75% or greater nonionic surfactant at the manufacturer's recommended rate per 100 gals. water. For small spray solution volumes, mix 0.75 fl. oz. (22 ml) VERDURE-X-HERBICIDE with the appropriate amount of the nonionic surfactant in 1 gallon of water.

Broadcast Applications: 1-2 pts. VERDURE-X-HERBICIDE per acre plus a nonionic surfactant containing 75% or greater nonionic surfactant at the manufacturer's recommended rate per 100 gals. of spray mixture. Use sufficient water to ensure good spray coverage although increased spray volumes (60 gals. or more are recommended) will be necessary for treating tall and/or dense target plants.

DORMANT ESTABLISHED TURFGRASS (BERMUDAGRASS, ZOYSIAGRASS), NONFOOD OR FEED CROP

For control of emerged annual broadleaf and grass weeds, including Little Barley*, Annual Bluegrass, Bromes including Rescuegrass, Sixweeks fescue, Henbit, Buttercup, and Carolina Geranium in established dormant bermudagrass lawns, parks, golf courses, etc. Apply 1-2 pts. VERDURE-X-HERBICIDE per acre in 20-100 gals. of spray mixture by ground as a broadcast application. Add the labeled rate of a 75% or greater nonionic surfactant per 100 gals. of spray mixture.

Bermudagrass must be dormant at application. Application to actively growing bermudagrass may cause delay or permanent injury. Users in the extreme Southern areas should be attentive to the extent of dormancy at the time of application.

* For control of Little Barley, apply VERDURE-X-HERBICIDE prior to the mid-boot stage.
AQUATIC USE DIRECTIONS (FOR AQUATIC USE IN NEW YORK - SEE SPECIFIC NEW YORK AQUATIC USE DIRECTIONS IN THIS LABEL)

VERDURE-X-HERBICIDE is used to control aquatic weeds in public waters such as ponds, lakes, reservoirs, marshes, bayous, drainage ditches, canals, streams, rivers, and other slow-moving or quiescent bodies of water. Do not apply to water that is moving or if outflow leads to public waters (i.e., apply only to still water ponds, lakes and drainage ditches).

Optimum control of submersed weeds is obtained by applying VERDURE-X-HERBICIDE when the weeds are actively growing (photosynthesizing), typically when water temperatures are about 50°F or more, (this occurs usually in the Spring or early Summer). Necessary approval and/or permits should be obtained prior to application if required. Consult the responsible State Agencies (i.e. Fish and Game Agencies or Department of Natural Resources).

Treatment of dense weed areas may result in oxygen loss from decomposition of dead weeds. This loss of oxygen may cause fish suffocation. Therefore, treat only 0.33 – 0.5 of the water body area at one time and wait 14 days between treatments.

For best results on submersed weeds, VERDURE-X-HERBICIDE should be applied to actively growing (photosynthesizing) weeds when water temperatures have reached or exceeded approximately 50°F, typically during the Spring or early Summer.

For application only to Stillwater (i.e farm ponds, farm lakes, and farm drainage ditches) where there is minimal or no outflow to public waters.

Treatment of dense weed areas may result in oxygen loss from decomposition of dead weeds. This loss of oxygen may cause fish suffocation. Therefore, treat only 0.33 – 0.5 of the water body area at one time and wait 14 days between treatments.

For best results on submersed weeds, VERDURE-X-HERBICIDE should be applied to actively growing (photosynthesizing) weeds when water temperatures have reached or exceeded approximately 50°F, typically during the Spring or early Summer.

For application only to Stillwater (i.e farm ponds, farm lakes, and farm drainage ditches) where there is minimal or no outflow to public waters.

and/or

For applications to public waters in ponds, lakes, reservoirs, marshes, bayou, drainage ditches, canals, streams, rivers, and other slow-moving or quiescent bodies of water for control of aquatic weeds. For use by:

- Federal or State Public Agencies (i.e., Water Management District personnel, municipal officials);
- Applicators and/or Licensees (certified for aquatic pest control) that are authorized by the State or Local government.

Treated water may be used according to the following table or until such time as an approved assay (example: PAM II Spectromatic Method) shows that the water does not contain more than the designated maximum contaminant level goal (MCLG) of 0.02 mg/l (ppm) of diquat dibromide (calculated as the cation):

</tr>
</tbody>
</table>

*Rates refer to total surface area. Add a nonionic surfactant (with at least 75% of the constituents active as a spray adjuvant) at the rate recommended by the manufacturer.

**For preparing agricultural sprays for food crops, turf or ornamentals (to prevent phytotoxicity), do not use water treated with VERDURE-X-HERBICIDE before the specified time period. When the contents of more than one spray tank is necessary to complete a single aquatic application, no water holding restrictions apply between the consecutive spray tanks.

When the contents of more than one spray tank is necessary to complete a single aquatic application, no water holding restrictions apply between the consecutive spray tanks.

No applications are to be made in areas where commercial processing of fish, resulting in the production of Fish protein concentrate or fish meal, is practiced. Before application, coordination and approval of local and/or State authorities must be obtained.

Control of Floating and Marginal Weeds

VERDURE-X-HERBICIDE controls the listed floating and marginal weeds. Applications may be made by airboat, airplane, backpack, spray handgun, helicopter, or similar application equipment. For all application methods, ensure that weeds receive thorough spray coverage.

Floating and Marginal Weeds Controlled

- Water lettuce, *Pistia stratiotes*
- Water hyacinth, *Eichhornia crassipes*
- Duckweed, *Lemna spp.*
- *Salvinia* spp. (including *S. molesta*
- Pennywort (*Hydrocotyle* spp.)
- Frog’s Bit, *Limnium spongia*
- Cattails, *Typha* spp.
VERDURE-X-HERBICIDE does not control Richardson’s pondweed, P. richardsonii.

†† Suppression only. Spirogyra and/or Pithophora can be controlled using a tank mix of VERDURE-X-HERBICIDE with an approved algaecide.

For salvinia, waterlettuce and waterhyacinth, use the labeled rate of VERDURE-X-HERBICIDE in 76 to 200 gals. of water plus the labeled rate of a 75% or greater non-ionic surfactant per acre for full coverage and thorough weed contact. Repeat treatments may be necessary to control regrowth. For best results, apply before flowering (cattail),

For duckweed control, apply VERDURE-X-HERBICIDE at 1-2 gallons/acre. Apply as an overall spray in 50 to 150 gals. of water plus the labeled rate of a 75% or greater non-ionic surfactant per acre. Retreatment may be necessary for plants missed in previous applications and regrowth.

For pennywort and cattail control, apply in 50 to 150 gals. of water plus the labeled rate of a 75% or greater non-ionic surfactant per acre for surface sprays and for aerial application for waterlettuce and waterhyacinth control, apply the labeled rate of VERDURE-X-HERBICIDE in 10 to 24 gals. of water plus the labeled rate of a 75% or greater non-ionic surfactant per acre.

Control of Submerged Weeds

VERDURE-X-HERBICIDE controls the listed submerged weeds from application by surface, subsurface, and bottom placement applications. Enhanced weed control may be obtained in situations where severe weed or algae infestations are found; use an approved algaecide either as a pretreatment to an VERDURE-X-HERBICIDE application, or as a tank mix with VERDURE-X-HERBICIDE.

Submersed Weeds Controlled or Suppressed

Bladderwort, Utricularia spp.

Hydrida, Hydrilla verticillata

Watermilfoils (including Eurasian), Myriophyllum spp.

Pondweeds, Potamogeton spp.

Coontail, Ceratophyllum demersum

Elodea, Elodea spp.

Brazilian Elodea, Egeria densa

Naiad, Najas spp.

Algae, Spirogyra spp. and Pithophora spp.

†† Suppression only. Spirogyra and/or Pithophora can be controlled using a tank mix of VERDURE-X-HERBICIDE with an approved algaecide.

† For salvinia, waterlettuce and waterhyacinth, use the labeled rate of VERDURE-X-HERBICIDE in 76 to 200 gals. of water plus the labeled rate of a 75% or greater non-ionic surfactant per acre for full coverage and thorough weed contact. Repeat treatments may be necessary to control regrowth. For best results, apply before flowering (cattail),

For severe weed or algae infestations, the use of an approved algaecide either as a pretreatment to the VERDURE-X-HERBICIDE application or in a tank mix, may result in enhanced weed control.

For suppression of certain filamentous algae species including Spirogyra and Pithophora, apply according to the submersed use directions.

For severe weed or algae infestations, use the 2.0 gallon per surface acre rate. For best results, re-treat as necessary on 14-21 day intervals. The table below shows how many gallons of VERDURE-X-HERBICIDE to apply per surface acre based on water depth.

<table>
<thead>
<tr>
<th>Gallons of VERDURE-X-HERBICIDE per Surface Acre</th>
<th>Average Water Depth</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1 Foot</td>
</tr>
<tr>
<td>1 gallon/acre rate</td>
<td>0.25 gal.</td>
</tr>
<tr>
<td>2 gallon/acre rate</td>
<td>0.50 gal.</td>
</tr>
</tbody>
</table>

**Note:** For water depths of 2 feet or less including shorelines, do not exceed 1 gallon per surface acre. Lowest rates should be used in shallow areas where the water depth is considerably less than the coverage depth of the entire treatment area, for example, shallow shoreline area. At water temperatures below 50°-60°F efficacy and immediacy of results may be reduced.

**Subsurface Applications:** Where the submersed weed growth, especially Hydrilla, has reached the water surface, apply either in a water carrier or an invert emulsion carrier injecting diluted VERDURE-X-HERBICIDE near the bottom with weighted hoses may improve control. The addition of a copper based algaecide may improve control. If algae are present along with the submersed weeds, a pretreatment with a copper based algaecide may improve overall control.

**Bottom Placement:** Where submersed weeds such as Hydrilla, Bladderwort, or Coontail have reached the water surface and/or where the water is slowly moving through the weed growth, the use of an invert emulsion carrier injecting diluted VERDURE-X-HERBICIDE near the bottom with weighted hoses may improve control. The addition of a copper based algaecide may improve control. If algae are present along with the submersed weeds, a pretreatment with a copper based algaecide may improve overall control.
Surface Application for Submerged Aquatic Weeds: Apply the recommended rate of VERDURE-X-HERBICIDE as a spray in sufficient carrier to fully cover the target area. Applications should be made to ensure complete coverage of the weed areas. In mixed weed populations, use the high rate of application as indicated by weeds present. For dense submerged weeds or water over 2 feet deep, a surface spray is not recommended (VERDURE-X-HERBICIDE should be applied subsurface in these situations.)

In mixed weed populations, use the high rate of application as indicated by weeds present.

Application Rates for Submersed Weeds at Water Depths Greater than 4 feet (For Use in AL, CA, FL, ID & SC Only)

VERDURE-X-HERBICIDE is labeled for use at rates up to 2 gal/surface acre. These rates are based on a maximum water depth of 4 feet. If water depth exceeds 4 feet, higher rates per surface acre may be required for submerged weeds to obtain control.

<table>

AQUATIC USE DIRECTIONS FOR USE IN NEW YORK

The aquatic use directions below labeling are the only aquatic uses allowed in New York State.

For application only to ponds, lakes, and drainage ditches where there is little or no outflow of water and which are totally under the control of the product’s user. Do not use the treated water for animal consumption, spraying, irrigation, or domestic purposes for 14 days after treatment. Do not treat water where depth is 3 feet or less. Where water is 3 feet or more deep use the following rates based on weeds present. Dilute all applications by mixing with water prior to treatment at a dilution of 1 part product per 200 parts, or more, water. Apply only by spray to surface of lake with a boom sprayer.

**WEED SPECIES**  **USE RATE – GALS/SURFACE ACRE**  **APPLICATION**

**Submerged Weeds (Infesting Still Ponds, Lakes, Ditches or Portions Thereof):**

| Bladderwort (Utricularia spp.) | 1-2 | In mixed weed population use the high rate of application as indicated by weeds present |
| Coontail (Ceratophyllum demersum) | 2 | |
| Elodea (Elodea spp.) | 2 | |
| Naiad (Najas spp.) | 2 | |
| Pondweeds, (Potamogeton spp.)* | 1 | *
| *Except P. robbinsii; also Richardson Pondweed (P. richardsonii) in Minnesota. | |
| Watermilfoil (Myriophyllum spicatum) | 2 | |
| | 1 | |

**Floating Weeds:**

| Pennywort (Hydrocotyle umbellata) | 0.5 – 0.75 | 200 gals of water plus 1 pt. of a 75% spreader (non-ionic) should be applied as an overall spray for the control of the weeds. The high rates of VERDURE-X-HERBICIDE should be used for late season application. |
| Salvinia (Salvinia rotundifolia) | 0.5 – 0.75 | |
| Water Hyacinth (Eichhornia crassipes) | 0.5 – 0.75 | |
| Duckweed (Lemna spp and Spirodela spp) | 1 | For control, apply VERDURE-X-HERBICIDE as an overall spray in 200 gals. of water plus 1 pt. of a 75% spreader (non-ionic) per acre. Care should be taken to thoroughly cover all plants on water and limit application to damp marginal areas greater than 3 feet in depth. Re-infestation of Duckweed occurs readily from untreated areas. Retreatment with VERDURE-X-HERBICIDE may be necessary to obtain season long control. |
Formula for Parts per Million (ppm) Recommendations

Gals. to use = ppm recommended x acreage of water x average depth of water x 1.4. For example – 0.5 ppm recommendations; two acre pond; 4 feet average depth; 0.5 x 2 x 4 x 1.4 = 5.6 gals. required.

Restrictions: (1) Do not use for control of waterlettuce in N.Y. (2) Do not use Diquat for Algae control in N.Y. (3) Do not combine copper with Diquat in N.Y. (4) Do not apply by air in N.Y. (5) Do not apply under conditions involving possible drift to food, forage or other plantings that might be damaged or the crops thereof rendered unfit for sale, use or consumption.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage, disposal, or cleaning the equipment.

PESTICIDE STORAGE: Keep pesticide in original container. Do not put concentrate or dilute into food or drink containers. Do not contaminate feed, foodstuffs, or drinking water. Do not store or transport near feed or food. Store at temperatures above 32°F. Open dumping is prohibited. For help with any spill, leak or fire involving this material, call CHEMTREC at 1-800-424-9300.

PESTICIDE DISPOSAL: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER HANDLING [Less than 5 gallons]

Non-refillable Container: Do not reuse or refill this container. Offer for recycling, if available. Triple rinse container (or equivalent) after emptying as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

CONTAINER HANDLING [Bulk/Mini-Bulk]

Refillable Container: Refill this container with pesticide only. Do not reuse the container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the person refilling. To clean container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container 10 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinsate into application equipment or rinsate collection system. Repeat this rinsing procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures allowed by state and local authorities.

CONTAINER IS NOT SAFE FOR FOOD, FEED, OR DRINKING WATER.

CONDITIONS OF SALE
AND LIMITATION OF WARRANTY AND LIABILITY

NOTICE: Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

Follow Directions for Use of this product carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of the product, which are beyond the control of Helm Agro US, Inc. or Seller. To the extent of applicable law, all such risks shall be assumed by Buyer and User, and Buyer and User agree to hold Helm and Seller harmless for any claims relating to such factors.

Helm warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. This warranty does not extend to the use of this product contrary to label instructions, or under abnormal conditions or under conditions not reasonably foreseeable to or beyond the control of Seller or Helm, and Buyer and User assume the risk of any such use. **HELM MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE NOR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS STATED ABOVE.**

To the extent consistent with applicable law, in no event shall Helm or Seller be liable for any incidental, consequential or special damages resulting from the use or handling of this product. **TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF HELM AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF HELM OR SELLER, THE REPLACEMENT OF THE PRODUCT.**

Helm and Seller offer this product, and Buyer and User accept it, subject to the foregoing conditions of sale and limitations of warranty and of liability, which may not be modified except by written agreement signed by a duly authorized representative of Helm.
