For Agricultural Uses
EPA Reg. No. 66330-409-279    EPA Est. 279-NY-1

ACTIVE INGREDIENT:          By Wt.
Fluoxastrobin: [(1E)-(2 [(6 (2 Chlorophenoxy)
5 fluoro 4 pyrimidinyl)oxy]phenyl]
(5,6 dihydro 1,4,2 dioxazin 3 yl)
methanone-O-methyl oxime] .......................... 14.84%
Flutriafol: [(α-(2-fluorophenyl)-α
-(4-fluorophenyl)-1H-1,2,4-triazole
-1-ethanol] ..................................................... 19.30%
Other Ingredients.............................................. 65.86%
Total:                                     100.00%

This product contains 1.40 pounds fluoxastrobin per gallon (167 g/L) and 1.82 pounds flutriafol per gallon (218 g/L)

KEEP OUT OF REACH OF CHILDREN
CAUTION/PRECAUCIÓN

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label find someone to explain it to you in detail.)

See inside of booklet for additional Directions for Use and Precautionary Statements

| If in eyes | • Hold eye open and rinse slowly and gently with water for 15-20 minutes.  
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing.  
• Call a poison control center or doctor for treatment advice. |

HOTLINE NUMBER

FOR 24-HOUR EMERGENCY MEDICAL ASSISTANCE: Call PROSAR at 1-800-331-3148.
FOR 24-HOUR CHEMICAL EMERGENCY (spills, leaks, fire, exposure or accident) call CHEMTREC: 1-800-424-9300.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS
CAUTION. Harmful if swallowed. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.

PERSONAL PROTECTIVE EQUIPMENT (PPE)
Applicators and other handlers must wear long-sleeved shirt and long pants, shoes plus socks, and chemical resistant gloves made of any waterproof material, such as nitrile, butyl, neoprene and/or barrier laminate.

Follow manufacturer’s instructions for cleaning and maintaining PPE. If no such instructions exist for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS STATEMENT
When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [(40 CFR 170.240 (d) (4-6)), the handler PPE requirements may be reduced or modified as specified in the WPS.

User Safety Recommendations

Users should:
• Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
• Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS
This pesticide is toxic to mammals, fish and aquatic invertebrates. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas. The active ingredient in this product can be persistent for several months or longer. Do not apply directly to water or to areas...
where surface water is present or to intertidal areas below the mean high water mark, or other sensitive areas that may be exposed to spray drift. Do not contaminate water when disposing of equipment washwater or rinsate.

**Ground Water Advisory:** Flutriafol has properties and characteristics associated with chemicals detected in ground water. This chemical may leach into ground water if used in areas where soils are permeable, particularly where the water table is shallow.

**Surface Water Advisory:** This product may impact surface water quality due to runoff or discharge. This is especially true for poorly draining soils and areas with shallow ground water. This product is classified as having a high potential for reaching surface water via runoff for several months or more after application.

**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

**AGRICULTURAL USE REQUIREMENTS**

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions relating to all the standards on this label.

**PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:** coveralls, shoes plus socks, and chemical resistant gloves made of any waterproof material.

**PRODUCT INFORMATION**

Preemptor SC Fungicide is a broad-spectrum fungicide for the control of certain diseases in corn (field corn and field corn grown for seed), soybean and wheat. Preemptor SC Fungicide works by interfering with respiration and sterol synthesis in plant-pathogenic fungi, and is a potent inhibitor of sporangium germination and mycelial growth. The active ingredient, flutriafol, rapidly enters fungal cells via transmamellar movement. Preemptor SC Fungicide is rainfast 2 hours after application. Disease control will be reduced if rainfall occurs within 2 hours of application. The activity of Preemptor SC Fungicide makes it an excellent choice of a broad-spectrum fungicide function for disease management programs for corn, soybean and wheat. Other labeled fungicides can be used in tank mixture or alternated with Preemptor SC Fungicide to fulfill total disease management in corn (field corn and field corn grown for seed), soybean and wheat.

**CROP ROTATION**

Crops treated with Preemptor SC Fungicide may be rotated to corn, soybeans, peanuts or wheat at any time; sugar beets may be planted 30 days after treatment; and sweet corn and cotton may be planted 180 days after treatment. Rotation to any other crop not listed is prohibited.

**RESISTANCE MANAGEMENT**

The active ingredient Preemptor SC Fungicide (floxuradolin and flutriafol) belong to the strobilurin (Group 11 Fungicides) and the demethylation inhibitor (Group 3 Fungicides) fungicide classes, respectively. The dual action of Preemptor SC Fungicide results in a built in resistance management strategy that will minimize the resistance in any risk pathogens. Fungal pathogens are known to develop resistance to products with the same mode of action when used repeatedly. Because resistance development cannot be predicted, the use of this product should conform to resistance management strategies established for agricultural uses. Such strategies may include rotating and/or tank mixing with products having different modes of action, or limiting the total number of applications per year. FMC Corporation encourages responsible rotation and maintenance to ensure effective long-term control of the fungal diseases on this label.

In programs in which Preemptor SC Fungicide is used, the number of Group 11 fungicides (strobilurins) and Group 3 fungicides (demethylation inhibitors) applications should be no more than one half of the total number of fungicide applications per year for at risk pathogens. Follow specific directions for individual crops that limit the total number of applications.

**APPLICATION GUIDELINES**

**Broadcast Ground Sprayers**

Thorough coverage is necessary to provide good disease control. Applications using sufficient water volume to provide thorough and uniform coverage generally provide the most effective disease control. For ground application equipment 10 gallons/A minimum is required.

- Equip sprayers with nozzles that provide accurate and uniform application. Be certain that nozzles are the same size and uniformly spaced across the boom. Calibrate the sprayer before use. Use a pump with the capacity to maintain a minimum of 35 psi at nozzle(s) and provide sufficient agitation in the tank to keep the mixture in suspension (this requires recirculation of 10% of the tank volume per minute). Use jet agitators or a liquid sparge tube for vigorous agitation. Use screens to protect the pump and to prevent entry of vegetation, dirt or other debris from clogging. Snotches placed on the suction side of the pump should be 16-mesh or coarser. Do not place a screen in the recirculation line. Use 50-mesh screens at the nozzles. Check nozzle manufacturer’s recommendations. For information on calibration equipment and calibration, consult sprayer manufacturer’s and/or state recommendations. For specific local directions and spray schedules, consult the current state agricultural experiment station recommendations.

**Aerial Application**

- For aerial application, use aircraft spray equipment in a minimum of 2 gallons of spray solution per acre for corn, soybean and wheat. Avoid application under conditions when uniform coverage cannot be obtained or when excessive spray drift may occur. Do not apply directly to humans or animals. Aerial applications made to dry canopies may not provide sufficient coverage of lower leaves to provide proper disease control.

**Mixing Procedures**

Prepare the spray mixture than is needed for the immediate operation. Thoroughly clean spray equipment before using this product. Ensure agitation is necessary for proper dispersal of the product. Maintain maximum agitation throughout the spray operation. Do not let the spray mixture stand overnight in the spray tank. Flush the spray equipment thoroughly following each use and apply the rinsate to a previously treated area.

**Preemptor SC Fungicide Alone**

Add 1/2 of the required amount of water to the mix tank. With the agitator running before adding the remainder of the water. Begin application of the solution after the Preemptor SC Fungicide has completely and uniformly dispersed into the mix water. Maintain agitation until all of the mixture has been applied.

**Preemptor SC Fungicide+ Tank mix Partners**

Add 1/2 of the required amount of water to the mix tank. Start the agitation running before adding any tank mix partners. In general, tank mix partners should be added in this order: products packaged in water-soluble packaging (see note below), wettable powders, wettable granules, (dry flowables), liquid flowables (such as Preemptor SC Fungicide), liquid, emulsifiable concentrates. Always allow each tank mix partner to become fully and uniformly dispersed before adding the next product. Provide sufficient agitation while adding the remainder of the water. Maintain agitation until all of the mixture has been applied.

**RE: When using Preemptor SC Fungicide in tank mixtures, all products in water-soluble packaging should be added to the tank before any other tank mix partner. Allow the water-soluble packaging to completely disperse and the product(s) to completely disperse before adding any other tank mix partner to the tank.**

**Compatibility**

Preemptor SC Fungicide is physically compatible with most insecticide, fungicide, and fertilizer products. However, the physical compatibility of Preemptor SC Fungicide with tank mix partners should be tested before use. To determine the physical compatibility of Preemptor SC Fungicide with other products, use a jar test, as described below.

Using a quart jar, add the proportionate amounts of the products to 1 qt of water in the order described below. Mix well until all products are dissolved and the product(s) to completely disperse before adding any other tank mix partner to the tank. If using Preemptor SC Fungicide in a tank mixture, observe all directions for use, crop/sites, use rates, dilution ratios, precautions, and limitations, which appear on the tank mix product label. No label dosage rate may be exceeded, and the most restrictive label precautions and limitations must be followed. This product must not be mixed with any product that prohibits such mixing. Tank mixtures or application of other products referenced on this label are permitted only in those states in which the referenced products are registered.

**Crop Tolerance/Phytotoxicity**

Preemptor SC Fungicide may show some phytotoxicity on wheat when mixed with Huskie®, Huskie Complete, Axial® XL, or any bromoxynil based product. The crop safety of other tank mixes including additives and other pesticides on all crops has not been tested. Before applying any tank mixture not specifically recommended on this label, confirm the safety of the
tank mixture to the target crop. To test for crop safety, apply Preemptor SC Fungicide potential tank mixes to the target crop in a small area and in accordance with label instructions for the target crop.

CHEMIGATION
Do not apply this product through any type of irrigation system.

SPRAY DRIFT

Sensitive Areas
This pesticide must only be applied when the potential for drift to adjacent sensitive areas (e.g., residential areas, bodies of water, known habitats for threatened or endangered species, non-target crops) is minimal (e.g., when wind is blowing away from the sensitive areas). Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment-and-weather-related factors determines the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions.

The following drift management requirements must be followed to avoid off-target drift movement from aerial applications to agricultural field. These requirements do not apply to forestry applications, public health uses or to applications using dry formulation.

1. The distance of the outer most nozzles on the boom must not exceed ¾ the length of the wingspan or rotor.
2. Nozzles must always point backward parallel with the air stream and never be pointed downwards more than 45 degrees.
3. Comply with all state regulations. The applicator must be familiar with and take into account the information covered in the Aerial Drift Reduction Advisory Information.

AERIAL DRIFT REDUCTION ADVISORY
This section is advisory in nature and does not supersede the mandatory label requirements.

Information on Droplet Size
The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (see Wind, Temperature and Humidity, and Temperature Inversions below).

Controlling Droplet Size
• Volume - Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
• Pressure - Do not exceed the nozzle manufacturer’s recommended pressures. For many nozzle types lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
• Number of nozzles - Use the minimum number of nozzles that provide uniform coverage.
• Nozzle Orientation - Orienting nozzles so that the spray is released parallel to the airstream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential.
• Nozzle Type - Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the largest droplets and the lowest drift.

Boom Length
For some use patterns, reducing the effective boom length to less than ¾ of the wingspan or rotor length may further reduce drift without reducing swath width.

Application Height
Applications must not be made at a height greater than 10 feet above the top of the target plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

Swath Adjustment
When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator should compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase, with increasing drift potential (higher wind, smaller drops, etc.).

Wind
Drift potential is lowest between wind speeds of 2 - 10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application must be avoided below 2 mph due to variable wind direction and high inversion potential.

NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

Temperature and Humidity
When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

Temperature Inversions
Applications must not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

USE DIRECTIONS FOR SPECIFIC CROP
Preemptor SC Fungicide provides control or suppression of several important diseases listed for corn (field corn and field corn grown for seed), soybean and wheat.

RESTRICTIONS:
Do not apply more than 12 fl oz/A Preemptor SC Fungicide per year.
Do not apply more than 0.132 lb ai/A fluoxastrobin and 0.227 lb ai/A flutriafol per year.
Do not make more than two applications per year. Apply no later than growth stage R4 (early dough stage).
The minimum retreatment interval is 7days.
Do not use an adjuvant after the V8 stage and prior to the VT stage of corn. An adjuvant may be used at any other growth stage.
Restricted Entry Interval (REI) for detasselling is 5 days. The REI for all other activities is 12 hours.
Pre-Harvest Interval: Do not apply Preemptor SC Fungicide within 30 days of harvest (grain, seed, forage or stover).

**RESTRICTIONS:**
Do not apply more than 12 fl oz/A per year.
Do not apply more than 0.25 lb ai/A fluoxastrobin and 0.227 lb ai/A flutriafol per year.
Do not apply more than 2 applications per year.
The minimum retreatment interval is 14 days.
Do not make more than one application prior to harvest of wheat forage.
Do not apply past Feekes 10.5 (Zadoks 59).
Restricted Entry Interval (REI) is 12 hours.
Preharvest Interval: Do not apply within 40 days of harvest of grain or straw; within 15 days of harvest for hay; or within 7 days of harvest for forage.

**OTHER INFORMATION:**
Do not mix tank Preemptor SC Fungicide with Huskie, Huskie Complete, Axial XL, or any bromoxynil based product or crop injury could occur.
Follow the directions of the tank mix partner label with respect to adjutant use.

**CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY**

**NOTICE:** Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions for Use of this product must be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness, or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions beyond the control of FMC or Seller. To the extent consistent with applicable law, all such risks shall be assumed by Buyer and User, and, to the extent consistent with applicable law, Buyer and User agree to hold FMC and Seller harmless for any claims relating to such factors.

Seller warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated on the Directions for Use when used in accordance with the directions under normal conditions of use. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, FMC MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE, NOR ANY OTHER EXPRESS OR IMPLIED WARRANTIES WITH RESPECT TO THE SELECTION, PURCHASE, OR USE OF THIS PRODUCT. Any warranties, express or implied, having been made are inapplicable if this product has been used contrary to label instructions, or under abnormal conditions, or under conditions not reasonably foreseeable to (or beyond the control of) seller or FMC, and, to the extent permitted by applicable law, buyer assumes the risk of any such use.

To the extent consistent with applicable law, FMC or seller shall not be liable for any incidental, consequential or special damages resulting from the use or handling of this product. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF FMC AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF FMC OR SELLER, THE REPLACEMENT OF THE PRODUCT.
This Condition of Sale and Limitation of Warranty and Liability may not be amended by any oral or written agreement.
