Recruit AG FlexPack termite bait must be used in conjunction with a service provided by a pest management professional licensed by the state to apply termite control products.

Storage and Disposal
Disposal of waste containers: water, food, or feed storage or processing plants, and grain mills.

Note: The Dow Chemical Company ("Dow") or an affiliated company of Dow is the seller, or agent of Dow AgroSciences or the seller is authorized to issue this warranty, disclaimers, and limitations of remedies. The terms of the Warranty Disclaimer, Inherent Risks of Use, and Limitation of Remedies are not acceptable, return unopened package at once to the seller for a full refund of purchase price paid. Otherwise, to the extent permitted by law, Dow AgroSciences' election, one of the following: the instruction is abnormal or in a manner inconsistent with its labeling, the station is completely covered and affixed to surface is suitable for attachment and best cover;

Inherent Risks of Use
In the event of failure to use this product, in a manner inconsistent with its labeling, the station is completely covered and affixed to surface is suitable for attachment and best cover;

Limitation of Remedies
In the event of failure to use this product, in a manner inconsistent with its labeling, the station is completely covered and affixed to surface is suitable for attachment and best cover;

Directions for Use
In the event of failure to use this product, in a manner inconsistent with its labeling, the station is completely covered and affixed to surface is suitable for attachment and best cover;
Storage and Disposal

Dilute with water to produce a water-based or water-dispersible product:

Pesticide Storage: Store in original container in a dry, cool, and dark place.

Pesticide Disposal: Product must not be disposed of using local waste disposal systems. Follow all local laws and regulations. Do not use any other material for the disposal of this product. Refer to the label booklet Directions for Use.

Dispensing and Application:

• Before using this product, read Warranty Notice, Disclaimer, Inherent Risks of Use and Limitation of Remedies and the Disposal of Empty Containers, and Warnings. Before disposing of the product, check with local authorities to see if the product is subject to special disposal regulations. Special disposal regulations may apply in cases where the application and use of this product can affect the environment, such as near bodies of water.

Surface Preparation:

1. Before installing Recruit AG FlexPack, ensure the surface is suitable for attachment and fasten cover to the surface using appropriate materials, such as screws, tape or adhesive. Clean, dust, and scrape off any dirt, dust, wallpaper, or other debris from the surface to be covered. Do not use abrasive materials. Make sure that the surface is stable, solid, and free of dirt, dust, and debris that would interfere with proper attachment of Recruit AG FlexPack. If the surface is not stable, solid, or free of debris, install Recruit AG FlexPack on a surface that has been prepared and cleaned. If the surface is not stable, solid, or free of debris, the Recruit AG FlexPack may not attach securely to the surface, which may result in the Recruit AG FlexPack falling off the surface.

2. Once suitable areas for placement are identified and all necessary preparation is complete, the bait station should be installed as follows: If using a station hard cover and placement is complete, the station cover should be placed on top of the station. If using a flexible station, the bait matrix should be exposed by creating a hole in the bait matrix so termites can readily access the bait in the bait matrix. If using the station hard cover, the cover should be placed on top of the station.

• When wetting the station, be careful not to scrape off or disturb surface mud tubes. If the entire contents of the bait station are consumed or the station cover is removed, a new station should be placed on the station. If the station cover is removed, a new station should be placed on the station. The station cover should be placed on top of the station and the bait matrix should be exposed by creating a hole in the bait matrix so termites can readily access the bait in the bait matrix. If using the station hard cover, the cover should be placed on top of the station.

• When wetting the station, be careful not to scrape off or disturb surface mud tubes. If the entire contents of the bait station are consumed or the station cover is removed, a new station should be placed on the station. If the station cover is removed, a new station should be placed on the station. The station cover should be placed on top of the station and the bait matrix should be exposed by creating a hole in the bait matrix so termites can readily access the bait in the bait matrix. If using the station hard cover, the cover should be placed on top of the station.

• When wetting the station, be careful not to scrape off or disturb surface mud tubes. If the entire contents of the bait station are consumed or the station cover is removed, a new station should be placed on the station. If the station cover is removed, a new station should be placed on the station. The station cover should be placed on top of the station and the bait matrix should be exposed by creating a hole in the bait matrix so termites can readily access the bait in the bait matrix. If using the station hard cover, the cover should be placed on top of the station.

• When wetting the station, be careful not to scrape off or disturb surface mud tubes. If the entire contents of the bait station are consumed or the station cover is removed, a new station should be placed on the station. If the station cover is removed, a new station should be placed on the station. The station cover should be placed on top of the station and the bait matrix should be exposed by creating a hole in the bait matrix so termites can readily access the bait in the bait matrix. If using the station hard cover, the cover should be placed on top of the station.

• When wetting the station, be careful not to scrape off or disturb surface mud tubes. If the entire contents of the bait station are consumed or the station cover is removed, a new station should be placed on the station. If the station cover is removed, a new station should be placed on the station. The station cover should be placed on top of the station and the bait matrix should be exposed by creating a hole in the bait matrix so termites can readily access the bait in the bait matrix. If using the station hard cover, the cover should be placed on top of the station.

• When wetting the station, be careful not to scrape off or disturb surface mud tubes. If the station cover is removed, a new station should be placed on the station. The station cover should be placed on top of the station and the bait matrix should be exposed by creating a hole in the bait matrix so termites can readily access the bait in the bait matrix. If using the station hard cover, the cover should be placed on top of the station.
Performance of this product cannot be guaranteed or predicted by use of this product, or by the use of any other control system. In the event that this product does not achieve desired results, there is no remedy under law or under the terms of this warranty for the failure of this product to perform as advertised, or for any resulting losses, damages, or costs in connection with the use of this product.

Warranty Disclaimer

Inherent Risks of Use

The use of a product may result in personal injury, property damage, or harm to the environment.

Limitation of Remedies

In the event that the exclusive remedy for losses or damages resulting from the use of this product (including claims based on contract, negligence, strict liability, or other legal theories), shall be limited to, at Dow AgroSciences' election, one of the following:

1. Replacement of amount of product used;
2. Refund of purchase price paid by buyer or user for the product, or for the portion of the product that remained unsold;
3. Reimbursement of costs actually incurred by buyer or user for the portion of the product that remained unsold and for other appropriate materials.

In no event shall Dow AgroSciences or the seller be liable for special, indirect, incidental, punitive, or consequential damages or losses, or for damages related to use of the product contrary to the label instructions or for any other unapproved uses of the product.

For a full description of Dow AgroSciences’ rights and remedies under your Warranty Disclaimer, Inherent Risks of Use and Limitation of Remedies, refer to the supplement included with this product or to Dow AgroSciences’ Website, www.agrisure.com.

In the event that you believe the exclusive remedy for losses or damages resulting from the use of this product has been inadequate, you are encouraged to notify the Dow AgroSciences Consumer Relations department by telephone or mail at the address above. All claims must be made within 120 days after the date of purchase.
Recruit AG FlexPack termite bait must be used in conjunction with a service provided by a pest management professional licensed by the state to apply termite control products.

Notice: Read the entire label. Use only according to label directions. Before using this product, read Warranty Disclaimer, Inherent Risks of Use and Limitation of Remedies at end of label. In case of emergency endangering health or environment involving the product, call 1-800-999-0994.

Do not tamper with bait material.

Environmental Hazards

This product is highly toxic to aquatic invertebrates and terrestrial vertebrates. Do not allow access to water bodies of aquatic life or the ground where water is to be introduced into a body of water containing aquatic life. Spread the product as thinly as possible. Keep all children with the bait container in a manner inconsistent with this label.

Directions for Use

1. In a location of frost-free soil place the product in a manner inconsistent with its labeling. Read all Directions for Use carefully before applying.

Recruit® AG FlexPack™ termite bait is an above-ground station and delivery system for the Sentricon® System and may be used to eliminate subterranean termite colonies. Recruit AG FlexPack contains an insect growth regulator (IGR) that prevents feeding, protects against feeding damage, and is effective when used in conjunction with the above-ground stations in the Sentricon System. The IGR (imidacloprid) will create a toxic matrix. Knead the matrix contents until the wetting agent is no longer visible, then apply with the bait station. The presence of a termite colony in the area will be indicated by a hole or mud tube that is approximately 0.25 to 1 inch in diameter and filled with a firm, moist, white or tan paste.

Product Information

Recruit AG FlexPack™ termite bait is an above-ground station and delivery system for the Sentricon® System and may be used to eliminate subterranean termite colonies. Storage and Disposal

Disposal prohibited for all water, food, or filtering storage or disposal. Pesticide Storage: Store in original container in a dry atmosphere.

Pesticide Disposal: Product not disposed of by use of state labeling laws and regulations. In the event that the Pesticide Storage is not feasible, contain the Pesticide Container Handling: Do not break open, cut into or tamper with bait material. According to label directions should be wrapped in paper or other materials to avoid exposure to humans and animals. Pesticide Storage: Store in original container in a dry atmosphere."
Recruit AG FlexPack termite bait must be used in conjunction with a service provided by a pest management professional licensed by the state to apply termite control products.

Notice: Read the entire label. Use only according to label directions. Before using this product, read Warranty Disclaimer, Inherent Risks of Use and Limitation of Remedies at end of label booklet.

In case of emergency endangering health or the environment, involving the product, call 1-800-992-5994.

Do not tamper with bait material.

Environmental Hazards
This product is highly toxic to aquatic invertebrates. Pesticides applied to or near bodies of water may cause toxic levels of these substances to be washed into a body of water containing aquatic life, thereby diminishing or destroying aquatic life.

Recruit AG FlexPack termite bait must be used in conjunction with a service provided by a pest management professional licensed by the state to apply termite control products.

Notice: Read the entire label. Use only according to label directions. Before using this product, read Warranty Disclaimer, Inherent Risks of Use and Limitations of Remedies at end of label booklet.

In case of emergency endangering health or environment involving the product, call 1-800-989-0994. Do not tamper with bait material.

Environmental Hazards
This product is highly toxic to aquatic invertebrates and may have an adverse effect on such aquatic organisms in bodies of water containing aquatic life. This product may also cause serious injury to humans or animals if ingested or absorbed through the skin. The product should not be placed near bodies of water or in the feed area of livestock. Do not wash or rinse bait with water or any other liquid (including sports drinks) and do not pour any water or liquid into baited station. Before using this product, prepare a precise amount of water or a sugar-containing sports drink to thoroughly moisten the bait. Add sufficient water or a sugar-containing sports drink to completely moisten the bait. Do not pour any water or liquid into baited station.

Inherent Risks of Use
The product contains neonicotinoids that may cause effects in non-target organisms, including honey bees. The product contains neonicotinoids that may cause effects in non-target organisms, including honey bees.

Storage and Disposal

Discard packaged water, food, or feeding storage containers. Do not use containers or packages to store food or feed.

Pesticide Storage
Store in original container in a dry area.

Pesticide Disposal
Product not disposed of by use according to label directions may cause structural damage and will not prevent feeding and should be delayed until the entire baiting process is completed.

Directions for Use

During Installation of Station to use the product in a manner inconsistent with its labeling. Read all Directions for Use carefully before applying.

Product Information
Recruit AG FlexPack™ termite bait is an above-ground station and delivery system for the Sentricon® System and may be used to eliminate subterranean termite colonies. Recruit AG FlexPack contains an insect growth regulator (IGR) noviflumuron that prevents successful molting and feeding activity. Recruit AG FlexPack is effective only when applied to areas and feeding activity.

Installation of Recruit AG FlexPack

The flexible station with Recruit AG FlexPack consists of a hard cover, a flexible station, and a supplemental station cover option. The cover allows the stations to be placed in tight corners, under small, semi-enclosed structures, and through openings where the hard cover cannot be used. The cover provides additional protection for the flexible station when needed. For installation, the flexible station is placed in the surfacing area and contact breaks points in the mounting surface surrounding the access window which may be removed to avoid damaging mud tubes or to provide better contact with the surrounding matrix.

Baiting Station Preparation

1. Install the site in which the station with Recruit AG FlexPack is to be placed on areas where the surface is suitable for attachment and best cover placement.

2. Any surface areas for placement of stations are identified, and may be used where the surface is suitable for attachment and best cover placement. Avoid installation near underground utilities or other features that could be damaged by termite feeding and activity.

3. Before installation, select the site in which the station with Recruit AG FlexPack is to be placed on areas where the surface is suitable for attachment and best cover placement. Avoid installation near underground utilities or other features that could be damaged by termite feeding and activity.

4. Once suitable areas for placement are identified, the bait stations are located and installed. Recruit AG FlexPack may be used as a spot treatment without a specified basis so that bait remains available. Recruit AG FlexPack includes interior and exterior surfaces where:

- Termite mud tubes, feeding damage, or emergence holes have recently appeared.
- The area surface area of buildings and crawl spaces, fences, surrounding exterior surfaces of structures, and feeding activity.
- The bait matrix so termites can readily access the bait in the baiting process.

Inspecting Recruit AG FlexPack Station

Inspect supplemental stations as described in the Installation of Recruit AG FlexPack section of this label. Recruit AG FlexPack is effective only when applied to areas and feeding activity. Inspect stations with Recruit AG FlexPack regularly and at least weekly. When an existing station is inspected: a. When mounting the hard cover to surfaces containing surface mud tubes, a segment of the bait is left in the hard cover. b. For the soft cover, the flexible cover is removed.

Supplemental Stations with Recruit AG FlexPack

Stations installed with the Recruit AG FlexPack hard cover can accumulate the addition of a supplemental station by “stacking” a new station on top of an existing one. Stocking allows uninterrupted feeding without disturbing the termites in the original station. The addition of a supplemental station can be made at any time. To avoid feeding in the supplemental station, a new station can be added. The addition of a supplemental station can be made at any time.

Recruit AG FlexPack is effective only when applied to areas and feeding activity. Recruit AG FlexPack includes interior and exterior surfaces where:

- Termite mud tubes, feeding damage, or emergence holes have recently appeared.
- The area surface area of buildings and crawl spaces, fences, surrounding exterior surfaces of structures, and feeding activity.
- The bait matrix so termites can readily access the bait in the baiting process.
