Zidua® SC Herbicide

For weed control in corn, cotton, soybean, and wheat

Active Ingredient:
pyroxasulfone: 3-[[5-(difluoromethoxy)-1-methyl-3-(trifluoromethyl)-1H-pyrazol-4-yl]methyl]sulfonyl]-4,5-dihydro-5,5-dimethylisoxazole ................................. 41.46%

Other Ingredients: .................................................................................................................. 58.54%
Total: ....................................................................................................................................... 100.00%

Contains 4.17 pounds of pyroxasulfone per gallon formulated as a water-based suspension concentrate

EPA Reg. No. 7969-374

KEEP OUT OF REACH OF CHILDREN
CAUTION/PRECAUCION

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

See inside for complete First Aid, Precautionary Statements, Directions For Use, Conditions of Sale and Warranty, and state-specific crop and/or use site restrictions.

In case of an emergency endangering life or property involving this product, call day or night 1-800-832-HELP (4357).

Shake container well before use.

Net Contents: 2.5 gallons

BASF Corporation
26 Davis Drive
Research Triangle Park, NC 27709

Product of India.

□ dp proofed ______
FIRST AID

If swallowed

- Call a poison control center or doctor immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- DO NOT induce vomiting unless told to do so by the poison control center or doctor.
- DO NOT give anything to an unconscious person.

If on skin

- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15 to 20 minutes.
- Call a poison control center or doctor for treatment advice.

If in eyes

- Hold eyes open and rinse slowly and gently with water for 15 to 20 minutes.
- Remove contact lenses, if present, after first 5 minutes; then continue rinsing eyes.
- Call a poison control center or doctor for treatment advice.

If inhaled

- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance; then give artificial respiration, preferably by mouth to mouth if possible.
- Call a poison control center or doctor for further treatment advice.

HOTLINE NUMBER

Have the product container or label with you when calling a poison control center or doctor or going for treatment. You may also contact BASF Corporation for emergency medical treatment information at 1-800-832-HELP (4357).

Precautionary Statements

Hazard to Humans and Domestic Animals

CAUTION. Harmful if swallowed. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet.

Personal Protective Equipment (PPE)

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Chemical-resistant gloves made of any waterproof material such as barrier laminate, butyl rubber ≥ 14 mils, nitrile rubber ≥ 14 mils, neoprene rubber ≥ 14 mils, natural rubber ≥ 14 mils, polyethylene, polyvinyl chloride ≥ 14 mils, or viton ≥ 14 mils
- Shoes plus socks

For aerial application, mixers and loaders must also wear a PF5 respirator. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions exist for washables, use detergent and hot water. Keep and wash PPE separately from other laundry. Remove and wash contaminated clothing before reuse. Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product’s concentrate. DO NOT reuse them.

Engineering Controls

When handlers use closed systems or enclosed cabs that meet the requirements listed in the Worker Protection Standards (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

USER SAFETY RECOMMENDATIONS

Users should:

- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

Environmental Hazards

DO NOT apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. DO NOT contaminate water when disposing of equipment washwater or rinsate.

DO NOT discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans, or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. DO NOT discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance, contact your State Water Board or Regional Office of the EPA. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas.

Groundwater Advisory

This chemical has properties and characteristics associated with chemicals detected in groundwater. This chemical may leach into groundwater if used in areas where soils are permeable, particularly where the water table is shallow.

Surface Water Advisory

DO NOT apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas. DO NOT contaminate water when disposing of equipment washwater or rinsate. This product may impact surface water quality due to runoff or rainwater. This is especially true for poorly draining soils and soils with shallow groundwater. This product is classified as having a high potential for reaching surface water via runoff for several months or more after application. A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce potential loading of pyroxasulfone and its degradation product, [5-(difluoromethoxy)-1-methyl-3-(trifluoromethyl)-1H-pyrazol-4-yl]methanesulfonic acid (M1), from runoff water and sediment. Runoff of this product will be reduced by avoiding application when rainfall is forecast to occur within 48 hours.

Point-source Contamination. To prevent point-source contamination, DO NOT mix or load this or any other pesticide within 50 feet of wells (including abandoned wells and drainage wells, sinkholes, perennial or intermittent streams and rivers, and natural or impounded lakes and reservoirs). This setback does not apply to properly capped or plugged abandoned wells and does not apply to impervious pad or dike mixing/loading areas as described below.
MIXING, loading, rinsing, or washing operations performed within 50 feet of a well are allowed only when conducted on an impervious pad constructed to withstand the weight of the heaviest load that may be on or move across the pad. The pad must be self-contained to prevent surface water flow over or from the pad. The pad capacity must be maintained at 110% of that of the largest pesticide container or application equipment used on the pad and have sufficient capacity to contain all product spills, equipment or container leaks, equipment washwater, and rainwater that may fall on the pad. The containment capacity does not apply to vehicles delivering pesticide shipments to the mixing/loading site. States may have in effect additional requirements regarding wellhead setbacks and operational containment. Care must be taken when using this product to prevent back-siphoning into wells, spills, or improper disposal of excess pesticide, spray mixes, or rinsates. Check valves or anti-siphoning devices must be used on all mixing equipment.

**Endangered Species Protection Requirements**

This product may have effects on federally listed threatened or endangered plant species or their critical habitat. When using this product, you must follow the measures contained in the Endangered Species Protection Bulletin for the county or parish in which you are applying the pesticide. To determine whether your county or parish has a Bulletin, and to obtain that Bulletin, consult http://www.epa.gov/espp/, or call 1-800-447-3813 no more than 6 months before using this product. Applicators must use Bulletins that are in effect in the month in which the pesticide will be applied. New Bulletins will generally be available from the above sources 6 months before their effective dates.

**Directions For Use**

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

Read the entire label. Use strictly in accordance with precautionary statements and directions and with applicable state and federal regulations.

DO NOT apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.

Failure to follow directions and precautions on this label may result in crop injury, poor weed control, and/or illegal residues.

**AGRICULTURAL USE REQUIREMENTS**

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, greenhouses, and handlers of agricultural insecticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval (REI) of 12 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water, is:

- **Coveralls**
- Chemical-resistant gloves made of any waterproof material such as barrier laminate, butyl rubber ≥ 14 mils, nitrile rubber ≥ 14 mils, neoprene rubber ≥ 14 mils, natural rubber ≥ 14 mils, polyethylene, polyvinyl chloride ≥ 14 mils, or viton ≥ 14 mils
- **Shoes plus socks**

**STORAGE AND DISPOSAL**

DO NOT contaminate water, food or feed by storage or disposal. Open dumping is prohibited.

**Pesticide Storage**

DO NOT use or store near heat or open flame. Store in original container in well-ventilated area separately from fertilizer, feed, or foodstuffs. Avoid cross-contamination with other pesticides.

**Pesticide Disposal**

Wastes resulting from the use of this product may be disposed of on-site or at an approved waste disposal facility. Improper disposal of excess pesticide, spray mix, or rinsate is a violation of federal law. If these wastes cannot be disposed of according to label instructions, contact the state agency responsible for pesticide regulation or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

**Container Handling**

**Nonrefillable Container. DO NOT reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying; then offer for recycling, if appropriate, or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures approved by state and local authorities.**

**Triple rinse containers small enough to shake (capacity ≤ 5 gallons) as follows:** Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank, or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

**Pressure rinse as follows:** Empty the remaining contents into application equipment or mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank, or collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

**In Case of Emergency**

In case of large-scale spill of this product, call:

- CHEMTREC       1-800-424-9300
- BASF Corporation 1-800-832-HELP (4357)

In case of medical emergency regarding this product, call:

- Your local doctor for immediate treatment
- Your local poison center (hospital)
- BASF Corporation 1-800-832-HELP (4357)

**Steps to take if material is released or spilled:**

- Dike and contain the spill with inert material (sand, earth, etc.) and transfer liquid and solid diking material to separate containers for disposal.
- Remove contaminated clothing and wash affected skin areas with soap and water.
- Wash clothing before reuse.
- Keep the spill out of all sewers and open bodies of water.

**Product Information**

Zidua® SC herbicide is a selective rate-dependent preemergence herbicide for controlling annual grass weeds, sedges, and annual broadleaf weeds (including biotypes resistant to ACCCase inhibitors, ALS inhibitors, and glyphosate) that infest corn, cotton, fallow, and soybean listed in Table 1 and wheat listed in Table 2. Refer to Crop-specific Information section for recommendations on herbicide tank mixes or sequential programs.
Periods of dry weather following application of Zidua® SC herbicide may reduce herbicidal effectiveness. Zidua SC must be activated by at least 1/2 inch of rainfall or irrigation before weed germination and emergence. When Zidua SC is not activated and weeds emerge, a labeled postemergence herbicide or shallow cultivation may be needed to control weed escapes.

\(^1\) Weeds such as annual bluegrass and Italian ryegrass have the ability to adapt to several different herbicide sites of action. Even though Zidua SC will control these species, some weed escapes are possible. Multiple herbicides with multiple different effective sites of action **MUST** be used in tank mixtures **or** sequentially to limit these weed escapes to prevent or delay the onset of herbicide-resistant weed biotypes.

\(^2\) For control of these weeds, a tank mix partner or a sequentially applied herbicide partner is needed.
Mode of Action

Zidua® SC herbicide acts to inhibit very long-chain fatty acid synthesis as a Group 15 (WSSA)/Group K₃ (HRAC) herbicide. It is a root-and-shoot growth inhibitor that controls susceptible germinating seedlings before or soon after they emerge from the soil.

Resistance Management

Zidua SC is a Group 15/Group K₃ herbicide. Any weed population may contain or develop plants naturally resistant to Zidua SC and other Group 15 herbicides. Weed species with resistance to Group 15 may eventually dominate the weed population if Group 15 herbicides are used repeatedly in the same field or in successive years as the primary method of control for targeted species. This may result in partial or total loss of control of those species by Zidua SC or other Group 15 herbicides.

To delay herbicide resistance consider:
- Avoiding the consecutive use of Zidua SC or other target-site-of-action Group 15 herbicides that have a similar target site of action on the same weed species
- Using tank mixes or premixes with herbicides from different target-site-of-action groups as long as the involved products are all registered for the same use, have different sites of action, and are both effective at the tank mix or prepack rate on the weed(s) of concern
- Basing herbicide use on a comprehensive IPM (Integrated Pest Management) program including cultural and mechanical methods
- Monitoring treated weed populations for loss of field efficacy, and control of escapes with effective alternative herbicides or mechanical methods
- Contacting your local extension specialist, certified crop advisors, and/or manufacturer for herbicide resistance management and/or integrated weed management recommendations for specific crops and resistant weed biotypes

Crop Tolerance

Crops are tolerant to Zidua SC when applied according to label directions and under normal environmental conditions. Application to crops under stress because of inadequate or excess of moisture for normal crop development, cool and hot temperatures, sodic soils, poorly drained soils, hail damage, flooding, pesticide injury, mechanical injury, or widely fluctuating temperatures may result in crop injury.

Application Instructions

Application rates of Zidua SC may vary depending on soil texture. Refer to Table 3 for soil texture groups used in this label unless a specific soil texture is mentioned. When use rates are in ranges, apply the low rate for soils with coarse texture or low organic matter; apply the high rates for fine soil textures, high organic matter, heavy soil surface plant residue, or heavy weed pressure.

Zidua SC may be used on peat soils and muck soils, and mineral soils with 10% or more organic matter, but weed control may be inconsistent and/or reduced. Use maximum labeled use rate allowed in the specific crop.

Refer to the Crop-specific Information section for specific application rates, timings, and the restrictions and limitations by crop and use pattern.

Application Timing

Zidua SC may be applied preplant surface, preplant incorporated, preemergence, early postemergence, postemergence-directed (layby), or in the fall. For each application timing, refer to Crop-specific Information for specific application instructions by crop.

Preplant Surface Application. Apply Zidua SC alone or in tank mixes up to 45 days before planting. If weeds are present at the time of application, use additional weed control methods such as tank mixes with an appropriate postemergence herbicide(s) to control emerged weeds.

Preplant Incorporated (PPI) Application. Incorporate Zidua SC into the upper (1 to 2 inches) soil surface up to 14 days before planting. Deeper incorporation may increase the potential for crop injury and also may result in reduced weed control. Use appropriate equipment for uniform shallow incorporation, such as a field cultivator, harrow, rolling cultivator, or finishing disc.

Preemergence Surface Application. After planting and before crop emergence, apply a uniform broadcast treatment to the soil surface. If weeds are present, apply Zidua SC in tank mixture with an appropriate postemergence herbicide, such as a glyphosate-containing product.

Early Postemergence Application. Zidua SC must be applied and activated before weed seedling emergence or in a tank mixture that controls emerged weeds.

Postemergence-directed (Layby) Application. Zidua SC must be applied as a directed spray between crop rows and activated before weed seedling emergence or in a tank mixture that controls emerged weeds.

Fall/Winter Application for controlling weeds germinating in the fall, or winter weeds. Zidua SC may be broadcast surface applied in the fall or winter after crop harvest. DO NOT apply to frozen or snow-covered soil. Tillage operations may be conducted before or after applying Zidua SC. If tillage is used following an application, tillage should be shallow (no more than 2-inches deep) to uniformly incorporate the herbicide into the upper soil surface.

Application Methods and Equipment

Zidua SC may be applied by aerial or ground application. DO NOT apply through any type of irrigation system.

Thorough spray coverage is required for optimum weed control and can be improved with proper nozzle and spray volume selection. Use and configure application equipment to provide an adequate spray volume, an accurate and uniform distribution of spray droplets over the treated area, and to avoid spray drift to nontarget areas. Adjust equipment to maintain continuous agitation during spraying with good mechanical or bypass agitation. Avoid overlaps that will increase rates above the use rates specified in this label.

Zidua SC may be applied using water or sprayable fluid nitrogen fertilizer solutions as the spray carrier. DO NOT apply this product without dilution in a spray carrier. Additionally, Zidua SC may be impregnated on and applied with dry bulk fertilizer.

Aerial Application Requirements

Spray Carrier Volume. Use 3 or more gallons of water per acre. The actual minimum spray volume per acre is determined by the spray equipment used. Use adequate spray volume to provide accurate and uniform distribution of spray particles over the treated area and to avoid spray drift.

The following measures must be followed to reduce the potential of spray drift to nontarget areas from aerial applications:

1. The distance of the outermost nozzles on the boom must not exceed 3/4 the length of the wingspan or 90% of rotor blade diameter.
2. Use low-drift nozzles such as straight-stream nozzles (D-4 or larger). DO NOT use nozzles producing a mist droplet spray.
3. Nozzles must always point backward parallel with the airstream and never be pointed downward more than 45 degrees.

4. Without compromising aircraft safety, application should be made at a height of 10 feet or less above the crop canopy or tallest plants. Applicators must follow the most restrictive use cautions to avoid drift hazards, including those found in this labeling as well as applicable state and local regulations and ordinances.

5. DO NOT apply during periods of temperature inversions or stable atmospheric conditions.

6. Avoid potential adverse effects to nontarget areas by maintaining a 30-feet buffer between the application area and the closest downwind edge of sensitive terrestrial habitats (such as grasslands, forested areas, shelter belts, woodlots, hedgerows, riparian areas, shrub lands, and crop lands).

 Ground Application Requirements

Spray Carrier Volume. Use 5 or more gallons of water per treated acre or 15 or more gallons of sprayable fluid nitrogen fertilizer per treated acre for weed control application.

The following measures must be followed to reduce the potential of spray drift to nontarget areas from ground application:

1. Apply this product using nozzles which deliver medium-to-ultra-coarse spray droplets as defined by ASABE standard S-572.1 and as shown in nozzle manufacturer’s catalogs. Flood-jet or Air Induction-type nozzles are recommended for residual soil surface application. Nozzles that deliver coarse spray droplets may be used to reduce spray drift provided spray volume per acre (GPA) is increased to maintain coverage of target (i.e. soil surface). DO NOT use nozzles that produce fine (e.g. cone) spray droplets.

2. Apply this product only when the potential for drift to adjacent nontarget areas is minimal (e.g. when the wind is 10 MPH or less and is blowing away from sensitive areas). DO NOT apply during periods of temperature inversions or stable atmospheric conditions.

3. Avoid potential adverse effects to nontarget areas by maintaining a 10-feet buffer between the application area and the closest downwind edge of sensitive terrestrial habitats (such as grasslands, forested areas, shelter belts, woodlots, hedgerows, riparian areas, shrub lands, and crop lands).

Ground Boom Application Height. Application should not be made at a height greater than 4 feet above the top of the largest plants. Making application at the lowest possible height reduces exposure of droplets to evaporation and wind.

Ground Application (Dry Bulk Fertilizer)

Zidua® SC herbicide may be impregnated or coated onto dry bulk granular fertilizer carriers for residual soil surface (fall, preplant surface, preplant incorporated) applications. Impregnation or coating may be conducted by in-plant bulk or on-board systems. Perform the mixing operation in well-ventilated areas.

All individual state regulations relating to dry bulk granular fertilizer blending, registration, labeling, and application are the responsibility of the individual and/or company selling the herbicide/fertilizer mixture.

Zidua SC may be impregnated on many commonly used dry fertilizers. DO NOT impregnate on ammonium nitrate, fertilizers containing ammonium nitrate, potassium nitrate, sodium nitrate, or powdered limestone.

Generally, fertilizer application rates of at least 200 lbs to 700 lbs per acre of herbicide and fertilizer blend will provide adequate distribution or coverage of Zidua SC across the soil surface. Application of impregnated fertilizer must be made uniformly to the soil to prevent possible crop injury and offer satisfactory weed control. Impregnated fertilizer spread at half rate and overlapped to obtain a full rate will offer a more uniform distribution. A shallow (less than 2 inches) incorporation is desirable for improved weed control. Deeper incorporation will dilute the herbicide layer near the soil surface and may result in unsatisfactory weed control.

Use the following formula to calculate the herbicide rate when using dry bulk fertilizer applications:

\[
\text{[ozs of Zidua SC per acre} \times 2000] \div \text{1 ton of fertilizer} = \text{ozs of Zidua SC for pounds fertilizer per acre}
\]

To impregnate Zidua SC on bulk fertilizer, use a closed rotary-drum mixer or other commonly used dry bulk fertilizer blender equipped with suitable spray equipment. Mix Zidua SC with sufficient water to form a sprayable slurry mixture. Spray nozzles must be directed to provide uniform fertilizer coverage while avoiding spray contact with mixing equipment. Nonuniform impregnation can cause crop injury or unsatisfactory performance. Spray herbicide mixture onto fertilizer after blending has started. Addition of a suitable drying agent may be necessary if the fertilizer and herbicide blend is too wet for uniform application due to high humidity, high urea concentration, or low fertilizer use rate. Slowly add the drying agent to the blend until a flowable mixture is obtained. Drying agents are not recommended for use with on-board impregnation systems.

Under some conditions, fertilizer impregnated with Zidua SC may clog air tubes or deflector plates on pneumatic application systems. Mineral oil may be added to Zidua SC before blending with fertilizer to reduce plugging. DO NOT use drying agents when mineral oil is used. To avoid separation of Zidua SC and mineral oil mixes in cold temperatures, keep mixture heated or agitated before blending with fertilizer. Mineral oil may be used with in-plant blending stations or with on-board injection systems.

Uniformly apply the treated fertilizer with accurately calibrated and proper equipment immediately after impregnation to avoid lump formation and spreading difficulties.

Accurate calibration of fertilizer application equipment and uniform fertilizer distribution is essential for satisfactory weed control.

Cleaning Spray Equipment

Clean application equipment thoroughly using a strong detergent or commercial sprayer cleaner according to the manufacturer’s directions. Triple rinse the equipment before and after applying Zidua SC.

Spray Drift Management

The interaction of many equipment-related and weather-related factors determines the potential for spray drift. The applicator and the grower are responsible for considering all factors involved in minimizing drift potential.

Droplet Size

The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Use nozzle types and nozzle arrangements that provide maximum coverage and minimize the potential for off-target movement of spray particles. Droplet size for both air and ground applications must be in the “medium” size category as defined in the August 1999 ASAE SS72 publication entitled “Spray Nozzle Classification by Drop Spectra”. Refer to that publication for additional information. Regardless of droplet size, if applications are made improperly or under unfavorable environmental conditions off-target movement will occur. See Wind: Temperature and Humidity and Temperature Inversion sections in this label.

Controlling Droplet Size

Volume. Use high flow rate nozzles that produce medium droplets to apply the highest practical spray volume.

Pressure. Use the lower spray pressures recommended for the nozzle, and DO NOT exceed the nozzle manufacturer’s recommended pressures. Higher pressure reduces droplet size and does not improve canopy penetration. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
**Number of Nozzles.** Use the minimum number of nozzles that provide uniform coverage.

**Nozzle Orientation.** Orienting nozzles so the spray is released backwards parallel to the airstream will produce larger droplets than other orientations. Significant deflection from the horizontal will reduce droplet size and increase drift potential.

**Nozzle Type.** Use a nozzle type designed for the intended application. **DO NOT** use air inducting or flood-type nozzles.

**Swath Adjustment**
When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the upwind and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase with increasing drift potential (higher wind, smaller droplets, etc.).

**Wind**
Drift potential is lowest between wind speeds of 2 to 8 mph. However, many factors, including droplet size and equipment type, determine drift potential at any given speed. Application must be avoided if wind speed is below 2 mph due to variable wind direction and high inversion potential.

**NOTE:** Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

**Temperature and Humidity**
When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation, but they should remain within the medium droplet size category. Droplet evaporation is most severe when conditions are both hot and dry.

**Temperature Inversion**
If inversion conditions are suspected, consult with local weather services before making an application. Applications must not occur during temperature inversions, because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light, variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light-to-no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud. This cloud can move in unpredictable directions due to the light, variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light-to-no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

**Sensitive Areas**
This pesticide must only be applied when the potential for drift to adjacent sensitive areas (e.g. residential areas, bodies of water, known habitat for threatened or endangered species, nontarget crops) is minimal (e.g. when wind is blowing away from the sensitive areas).

---

**Additives**

**Zidua® SC herbicide** has been formulated to provide optimal preemergence weed control. However, several tank mixes with **Zidua SC** may require an adjuvant to improve burndown of emerged weeds. Therefore, an adjuvant may be used with **Zidua SC** tank mixes that are applied fall, preplant, preemergence, or early postemergence. Follow the adjuvant recommendation for the tank mix partner of **Zidua SC**.

---

**Tank Mixing Information**

**Zidua SC** can be mixed with one or more registered herbicide products according to the specific tank mixing instructions in this label and respective product labels. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Always follow the most restrictive label use directions. Refer to **Crop-specific Information** section for tank mixing details for each crop.

Physical incompatibility, reduced weed control, or crop injury may result from mixing **Zidua SC** with other pesticides, additives, or fertilizers.

**Compatibility Test for Tank Mix Products**
Before mixing components, always perform a compatibility jar test.
1. For 20 gallons per acre spray volume, use 3.3 cups (800 mL) of water. For other spray volumes, adjust rates accordingly. Only use water from the intended source at the source temperature.
2. Add components in the sequence indicated in the mixing order using 2 teaspoons for each pound or 1 teaspoon for each pint of label rate per acre.
3. Always cap the jar and invert 10 cycles between component additions.
4. When the components have all been added to the jar, let the solution stand for 15 minutes.
5. Evaluate the solution for uniformity and stability. The spray solution should not have free oil on the surface, or fine particles that precipitate to the bottom, or thick (clabbered) texture. If the spray solution is not compatible, repeat the compatibility test with the addition of a suitable compatibility agent. If the solution is then compatible, use the compatibility agent as directed on its label. If the solution is still incompatible, **DO NOT** mix the ingredients in the same tank.

**Mixing Order**
Shake **Zidua SC** container well before use.
Maintain agitation throughout mixing and application until spraying is completed.
1. **Water** - Fill tank 1/2 to 3/4 full with clean water and start agitation.
2. **Inductor** - If an inductor is used, rinse it thoroughly after each component has been added.
3. **Products in PVA bags** - Place any product contained in water-soluble PVA bags into the mixing tank. Wait until all water-soluble PVA bags have fully dissolved and the product is evenly mixed in the spray tank before continuing.
4. **Water-soluble additives** (including dry and liquid fertilizers such as ammonium sulfate or urea ammonium nitrate)
5. **Water-dispersible products** (such as dry flowables, wettable powders, suspension concentrates, or suspensions) - Add **Zidua SC** at this point in the mixing process.
6. **Water-soluble products**
7. **Emulsifiable concentrates** (including methylated seed oil adjuvants)
8. **Remaining quantity of water**

If the spray mixture is allowed to settle for any period of time, thorough agitation is essential to resuspend the mixture before spraying is resumed. Continue agitation while spraying.

**Use Restrictions**

- **Maximum seasonal use rate** - Refer to **Crop-specific Information** section for maximum cropping seasonal application use rates of **Zidua SC** in each crop and use pattern. A cropping season is defined as the period following harvest of the preceding crop through the harvest of the planned or current crop.
- **Refer to **Crop-specific Information** for additional crop use restrictions.
- **Application** - **DO NOT** apply through any type of irrigation system.
- **DO NOT contaminate irrigation ditches or water used for domestic purposes.
- **Irrigation** - **DO NOT** use flood irrigation to apply, activate, or incorporate **Zidua SC**.
- **Zidua SC** is not for sale, distribution, or use in Nassau and Suffolk counties in New York State.
Use Precautions

- **Emergency replanting intervals** - If a labeled crop treated with Zidua® SC herbicide is lost to crop failure (because of environmental factors such as drought, frost, hail, etc.), the crop may be replanted immediately. However, **DO NOT** repeat application of Zidua SC after crop failure. A sequential application can be made as long as the maximum cumulative rate for the crop and soil per season is not exceeded.

- **Crop rotation intervals** - Use Table 4 to determine the proper interval between Zidua SC application and the planting of rotational crops. Determine the crop rotation interval for tank mix products, and use the most restrictive interval of all products applied.

1 Refer to Table 3 for definition of soil-texture groups.

### Application Rate

**Zidua SC** can be applied as part of a one-pass or planned sequential (two-pass) weed control program. A one-pass weed control program should be used where no cultivation or postemergence herbicide application is anticipated. One-pass application rates for Zidua SC when applied alone, in tank mix, or sequentially are provided in Table 5 for corn.

### Crop management

**Application Timing**

**Zidua SC** may be applied in a single application or in sequential applications.

**Fall/Winter Application for controlling weeds germinating in the fall, or winter annual weeds**

**Zidua SC** may be broadcast surface applied in the fall or winter to control winter annual weeds and other weeds germinating in the fall. Use on coarse, medium, or fine soils at rates listed for preplant surface timing. A sequential preemergence or postemergence application can be made, but **DO NOT** exceed the maximum cumulative rate allowed by soil type per season. See the main **Application Timing** section of this label for restrictions and recommendations.

**Preplant Surface Application (15 to 45 days before planting)**

Application rates in Table 5 should be used when making preplant surface applications, using the highest application rate for a given soil texture. Preplant surface applications are not recommended on coarse soils, in areas where average annual rainfall (or rainfall plus irrigation) typically exceeds 40 inches, or for popcorn or sweet corn. Cultivation or a labeled postemergence herbicide application may still be required under certain conditions for complete weed control.
Preplant Surface or Preplant Incorporated Application (up to 14 days before planting)
Apply Zidua® SC herbicide at the use rates specified in Table 5 or Table 6 as a broadcast spray to the soil surface or incorporated up to 14 days before planting on all soil types.

Preemergence Surface Application
Apply Zidua SC at use rates specified in Table 5 or Table 6 as a broadcast spray to the soil surface after planting and before crop emergence.

Early Postemergence Application
Apply Zidua SC at use rates specified in Table 5 as a broadcast spray to corn at spiking up to the V4 stage (visible fourth leaf collar).

Sequential Application
If a sequential application program of Zidua SC is used (e.g. fall application followed by spring application, or sequential applications in the spring), the maximum combined rate of Zidua SC that may be applied in a cropping season is 4.50 fl ozs/A on coarse soils or 8.25 fl ozs/A on all medium-to-fine soils.

Crop-specific Restrictions and Limitations
• On coarse soil - DO NOT apply more than a maximum cumulative amount of 4.50 fl ozs/A of Zidua SC (0.147 lb ai/A of pyroxasulfone) per year.
• On all soils other than coarse - DO NOT apply more than a maximum cumulative amount of 8.25 fl ozs/A of Zidua SC (0.277 lb ai/A of pyroxasulfone) per year.
• Seeding depth - Corn seed must be planted a minimum 1-inch deep.
• DO NOT harvest sweet corn ears for human consumption less than 37 days after application of Zidua SC.

Tank Mixes
Zidua SC may be tank mixed or applied sequentially with one or more of, but not limited to, the following herbicide products for a broader spectrum of control and/or control of emerged weeds. Refer to the tank mix product labels to confirm that the respective tank mix products are registered for use on specific corn types; not all corn products are registered for use on field corn, popcorn, and sweet corn.
• Outlook® herbicide
• Prowl® H₂O herbicide
• Sharpen® powered by Kixor® herbicide
• Status® herbicide
• Verdict® powered by Kixor® herbicide
  • atrazine
  • glyphosate

1 Includes postemergence tank mixes on glyphosate-tolerant corn hybrids
Always follow the most restrictive label use directions when mixing herbicide products.

Application Information

Application Timing
Zidua SC may be applied in a single application.

Postemergence-directed (Layby) Application
Apply Zidua SC at use rates specified in Table 7 as a broadcast-directed spray between cotton rows from 5-leaf stage to beginning bloom stage. Zidua SC will provide residual control of weeds germinating after application. Zidua SC will not control emerged weeds. Weeds emerged at the time of application must be controlled by another means, such as cultivation or a tank mix or sequential application of herbicide labeled for postemergence control of the target weeds in cotton. The use of hooded or shielded sprayers is recommended when applying Zidua SC as postemergence-directed (layby) spray. Avoid contacting cotton leaves with Zidua SC spray solution or injury may occur.

Application Rate
Apply Zidua SC alone, in tank mix, or sequentially in cotton at the residual rates in Table 7.

Table 7. Residual Rates of Zidua® SC herbicide

<table>
<thead>
<tr>
<th>Application Timing</th>
<th>Use Rate by Soil Texture¹ (fl ozs/A)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Postemergence-directed (Layby)</td>
<td>Coarse</td>
</tr>
<tr>
<td>DO NOT USE</td>
<td>1.25 to 2.50</td>
</tr>
</tbody>
</table>

¹ Refer to Table 3 for definition of soil-texture groups.

Crop-specific Restrictions and Limitations
• DO NOT apply Zidua SC as a preplant, preemergence, or postemergence over-the-top treatment in cotton.
• DO NOT apply more than 3.50 fl ozs/A of Zidua SC in a single application.
• There is no required (preharvest) interval between a postemergence-directed (layby) application of Zidua SC and the harvest of cotton.
• Cotton gin byproducts may be fed to livestock.
• The use of Zidua SC may result in temporary growth suppression in cotton if extreme conditions of high rainfall and extended periods of water-saturated soil occur during cotton germination or early seedling development.

Tank Mixes
Zidua SC may be tank mixed or applied sequentially with one or more of, but not limited to, the following herbicide products:
• Prowl H₂O
• glufosinate¹
• glyphosate²
1 Includes postemergence-directed (layby) tank mixes on glufosinate-tolerant cotton varieties
2 Includes postemergence-directed (layby) tank mixes on glyphosate-tolerant cotton varieties
Always follow the most restrictive label use directions when mixing herbicide products. Follow the adjuvant recommendation for the tank mix partner of Zidua SC.

Crop Tolerance
Cotton is tolerant to Zidua SC when applied postemergence-directed (layby). However, some visual cotton response is possible when Zidua SC is applied under stressful conditions such as inadequate or excessive moisture, cool or hot temperatures, compacted soils, injury from other pesticides, disease or other pest damage, mechanical injury, nutrient imbalances, or other conditions known to cause plant stress.

Cotton
Zidua SC can be applied postemergence-directed (layby) to cotton for residual preemergence control of listed weeds (Table 1). Before applying to cotton, verify with your local seed company (supplier) the selectivity of Zidua SC on your variety to avoid potential injury.

Fallow
Zidua SC may be used as a residual treatment to control listed weeds at any time of the year during the fallow period following crop harvest and before the following crop is planted.
Application Rate and Timing

Apply Zidua® SC herbicide as a broadcast spray at 1.75 to 6.50 fl ozs/A. Best product performance is obtained when weeds are not emerged before application.

Sequential applications may be made with a minimum of 30 days between applications, but DO NOT exceed the maximum seasonal cumulative amount of 8.25 ozs/A of Zidua SC per year.

Specific rotational crop planting intervals must be observed between an application of Zidua SC and planting of the following crops (see Table 4 for rotational crop planting intervals).

Soybean

Zidua SC may be applied preplant surface, preplant incorporated, preemergence, early postemergence, or in the fall to soybean for residual preemergence control of listed weeds (Table 1). Before applying to soybean, verify with your local seed company (supplier) the selectivity of Zidua SC on your variety to avoid potential injury.

Application Rate

Apply Zidua SC alone, in tank mix, or sequentially in soybean at the residual rates in Table 8.

Table 8. Residual Rates of Zidua® SC herbicide in Soybean

</tbody>
</table>

1 Refer to Table 3 for definition of soil-texture groups.

Application Timing

Zidua SC may be applied in a single application or in sequential applications.

Fall/Winter Application for controlling weeds germinating in the fall, or winter annual weeds

Zidua SC may be broadcast surface applied in the fall or winter to control winter annual weeds and other weeds germinating in the fall. Use on coarse, medium, or fine soils at rates listed for the preplant surface timing. Sequential preemergence and/or postemergence applications can be made, but DO NOT exceed the maximum cumulative rate allowed by soil type per season. See the main Application Timing section of this label for restrictions and recommendations.

Early Preplant Surface Application (15 to 45 days before planting)

Use the higher application rates listed in Table 8 for preplant surface applications when applied earlier (15 to 45 days) before planting. A lower rate within the list range could be used if a later sequential application is planned. Preplant surface applications are not recommended on coarse soils or in areas where average annual rainfall (or rainfall plus irrigation) typically exceeds 40 inches. Cultivation or a labeled postemergence herbicide application may still be required under certain conditions for complete weed control.

Preplant Surface or Preplant Incorporated Application (up to 14 days before planting)

Apply Zidua SC at the use rates specified in Table 8 as a broadcast spray to the soil surface or incorporated up to 14 days before planting on all soil types.

Preemergence Surface Application

Apply Zidua SC at use rates specified in Table 8 as a broadcast spray to the soil surface after planting and before crop emergence.

Early Postemergence Application

Apply Zidua SC at use rates specified in Table 8 as a broadcast spray to soybean at first-trifoliate leaf stage to third-trifoliate leaf stage. Zidua SC will provide residual control of weeds germinating after application. Weeds that are already emerged at the time of application must be controlled with cultivation, tank mix, or sequential application of another herbicide labeled for postemergence control of the target weeds in the crop. Zidua SC applications to emerged soybeans may result in temporary leaf burn and stunting, but any crop injury is typically transient and a reduction in soybean yield is unexpected. Tank mixes of Zidua SC with other crop protection products or adjuvants may significantly enhance this effect. Depending upon growing conditions, recovery from this injury begins immediately but may take several weeks for the injury to dissipate entirely.

DO NOT apply Zidua SC to soybean from emergence (at-cracking) through unifoliate stage or injury may occur.

Sequential Application

If a sequential application program of Zidua SC is used (e.g. fall application followed by spring application, or sequential applications in the spring), the maximum combined rate of Zidua SC that may be applied in a cropping season is 3.50 fl ozs/A on coarse soils or 5.75 fl ozs/A on medium-to-fine soils.

Crop-specific Restrictions and Limitations

• On coarse soil - DO NOT apply more than a maximum cumulative amount of 3.50 fl ozs/A of Zidua SC (0.114 lb ai/A of pyroxasulfone) per year.
• On all soils other than coarse - DO NOT apply more than a maximum cumulative amount of 5.75 fl ozs/A of Zidua SC (0.187 lb ai/A of pyroxasulfone) per year.
• Seeding depth - Soybean seed must be planted a minimum 1-inch deep.
• There is no required (preharvest) interval between a preplant, preemergence, or early postemergence application of Zidua SC and the harvest of soybean grain.
• The use of Zidua SC may result in temporary growth suppression in soybean if extreme conditions of high rainfall and extended periods of water-saturated soil occur during soybean germination or early seedling development.

Tank Mixes

Zidua SC may be tank mixed or applied sequentially with one or more of, but not limited to, the following herbicide products:
• Extreme® herbicide
• Optill® PRO powered by Kixor® herbicide
• Outlook® herbicide
• Prowl® H2O herbicide
• Pursuit® herbicide
• Raptor® herbicide
• Sharpen® powered by Kixor® herbicide
• Verdict® powered by Kixor® herbicide
• glyphosate1

1 Includes postemergence tank mixes on glyphosate-tolerant soybean varieties

Always follow the most restrictive label use directions when mixing herbicide products. Follow the adjuvant recommendation for the tank mix partner of Zidua SC.
Wheat

Crop Tolerance

Wheat is tolerant to Zidua® SC herbicide when applied delayed preemergence or early postemergence. However, some visual wheat response is possible when Zidua SC is applied to wheat under stressful conditions such as inadequate or excessive moisture, cool or hot temperatures, compacted soils, injury from other pesticides, disease or other pest damage, mechanical injury, nutrient imbalances, or other conditions known to cause plant stress.

Wheat response is most often visible as stunting and/or discoloration of leaf tissue (e.g. chlorosis), but in its most severe form can result in stand loss and yield reduction. The greatest potential for wheat response occurs when Zidua SC concentrates in the crop row. Unacceptable wheat response may be caused by uneven application, soil clods or disturbances, an open/cracked seed furrow that allows herbicide to directly contact the seed, or a deep seed furrow that allows herbicide concentration after a rain/irrigation event during wheat germination.

Certain wheat varieties can be more sensitive to Zidua SC. Before applying to wheat, verify tolerance with your local seed company (supplier), university extension specialist (e.g. wheat breeder, weed scientist, county agent, etc.), or BASF representative.

Weed Control

Zidua SC is a selective rate-dependent residual herbicide for control or suppression of annual grass and broadleaf weeds including biotypes resistant to ACCase inhibitors, ALS inhibitors, and glyphosate.

When applied as directed in wheat, Zidua SC will provide residual control or suppression of the weeds listed in Table 2 and will also provide suppression of other weeds listed in Table 1. For broad-spectrum weed control, a tank mix partner or a sequentially applied herbicide partner is needed. Refer to Tank Mixes following in Wheat section of this label for additional information.

Application Information

Zidua SC can be applied delayed preemergence or early postemergence in fall-seeded or spring-seeded wheat for residual weed control.

Apply Zidua SC only to a uniform seedbed that is firm and free of clods, cracks, excess trash (previous crop residue), and weed growth. The seedbed MUST be prepared to ensure good seed row closure and soil coverage of the seed. Open furrows or poor furrow closure can result in crop injury. Use high quality seed. Plant seed at least 3/4-inch deep to avoid crop injury.

The use of Zidua SC in wheat may result in temporary or sustained growth suppression and chlorosis if high rainfall or irrigation leads to extended periods of water-saturated soil during early seedling development. To reduce crop response, avoid applying Zidua SC if a long period of rain is expected before wheat emergence.

Herbicidal activity of Zidua SC may be reduced if trash from the previous crop covers more than 25% of the soil surface. Manage trash levels with combine straw shredder/spreaders, earlier burndown of emerged weeds, or light tillage.

Prolonged periods of dry weather following application of Zidua SC may reduce herbicidal effectiveness. When Zidua SC is not activated and weeds emerge, a labeled and effective postemergence herbicide in wheat may be needed to control weed escapes.

Zidua SC will not control germinated or emerged weeds, and should be applied with a tank mix partner or sequential application with a labeled burn-down or postemergence wheat herbicide(s) for control of emerged weeds.

Application Rate

Apply Zidua SC alone, in tank mix, or sequentially in wheat at the residual rates in Table 9.

Table 9. Residual Rates of Zidua® SC herbicide in Wheat

<table>
<thead>
<tr>
<th>Application Timing</th>
<th>Use Rate by Soil Texture1 (fl ozs/A)</th>

<td>1.25 to 1.75</td>
</tr>
<tr>
<td>Early postemergence</td>
<td>1.75 to 4.00</td>
</tr>
</tbody>
</table>

1 Refer to Table 3 for definition of soil-texture groups.

Application Timing

Zidua SC may be applied in a single application or in sequential applications relative to the growth stage of wheat.

Delayed Preemergence Surface Application

Apply Zidua SC at the use rates specified in Table 9 as a broadcast spray to the soil surface following wheat planting when 80% of germinated wheat seeds have a shoot at least 1/2-inch long until wheat spiking.

Early Postemergence Application

Apply Zidua SC at the use rates specified in Table 9 as a broadcast spray to wheat at spiking up to the 4th-tiller growth stage. Zidua SC will only suppress or control labeled weeds that germinate after the early postemergence application and rainfall/irrigation activation. Apply Zidua SC as early as possible after wheat emergence to prevent weed emergence.

Sequential Application

Zidua SC may be applied as a sequential or split application program where delayed preemergence application is followed by an early postemergence application or where multiple early postemergence applications are made. DO NOT apply more than a maximum cumulative amount of 4.00 fl ozs/A (0.130 lb ai/A of pyroxasulfone) per year.

Crop-specific Restrictions and Limitations

• DO NOT apply more than a maximum cumulative amount of 4.00 fl ozs/A of Zidua SC (0.130 lb ai/A of pyroxasulfone) per year.
• DO NOT apply Zidua SC to durum wheat.
• Wheat forage and hay can be fed or grazed 7 or more days after application.
• DO NOT seed wheat deeper than 1.5 inches before a delayed preemergence application.
• DO NOT apply Zidua SC to flooded fields or saturated soils.
• DO NOT irrigate fields after a delayed preemergence application until wheat spiking.
• DO NOT apply delayed preemergence to broadcast-seeded wheat.
• DO NOT apply Zidua SC preplant surface, preplant incorporated, or pre-emergence in wheat.

Tank Mixes

Delayed Preemergence. Zidua SC may tank mixed with one or more of, but not limited to, the following herbicide products for a broader spectrum of control and/or control of emerged weeds:

• Sharpen® powered by Kixor® herbicide
• glyphosate

NOTE: Applying Sharpen or glyphosate to emerged wheat will severely injure or kill the crop. DO NOT tank mix with Sharpen, glyphosate, or any other burndown herbicides if wheat has emerged (i.e. spiking or later).

Early Postemergence. Zidua SC may be tank mixed with one or more of, but not limited to, the following herbicide products for a broader spectrum of control and/or control of emerged weeds:

• ACCase inhibitors, ALS inhibitors, and glyphosate.
• DO NOT apply more than a maximum cumulative amount of 4.00 fl ozs/A of pyroxasulfone per year.
• DO NOT apply Zidua SC to durum wheat.
• Wheat forage and hay can be fed or grazed 7 or more days after application.
• DO NOT seed wheat deeper than 1.5 inches before a delayed preemergence application.
• DO NOT apply Zidua SC to flooded fields or saturated soils.
• DO NOT irrigate fields after a delayed preemergence application until wheat spiking.
• DO NOT apply delayed preemergence to broadcast-seeded wheat.
• DO NOT apply Zidua SC preplant surface, preplant incorporated, or pre-emergence in wheat.

Tank Mixes

Delayed Preemergence. Zidua SC may tank mixed with one or more of, but not limited to, the following herbicide products for a broader spectrum of control and/or control of emerged weeds:

• ACCase inhibitors, ALS inhibitors, and glyphosate.
• DO NOT apply more than a maximum cumulative amount of 4.00 fl ozs/A of pyroxasulfone per year.
• DO NOT apply Zidua SC to durum wheat.
• Wheat forage and hay can be fed or grazed 7 or more days after application.
• DO NOT seed wheat deeper than 1.5 inches before a delayed preemergence application.
• DO NOT apply Zidua SC to flooded fields or saturated soils.
• DO NOT irrigate fields after a delayed preemergence application until wheat spiking.
• DO NOT apply delayed preemergence to broadcast-seeded wheat.
• DO NOT apply Zidua SC preplant surface, preplant incorporated, or pre-emergence in wheat.

Tank Mixes
• **Beyond®** herbicide
  (for **Clearfield®** or **Clearfield® Plus** wheat only)
• **Clarity®** herbicide
• **Prowl® H₂O** herbicide
• metribuzin (winter wheat only)
• **Axial® XL** herbicide

Always follow the most restrictive label use directions when mixing herbicide products. Follow the adjuvant recommendation for the tank mix partner of **Zidua® SC** herbicide.
Conditions of Sale and Warranty

The Directions For Use of this product reflect the opinion of experts based on field use and tests. The directions are believed to be reliable and must be followed carefully. However, it is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or use of the product in a manner inconsistent with its labeling, all of which are beyond the control of BASF CORPORATION (“BASF”) or the Seller. To the extent consistent with applicable law, all such risks shall be assumed by the Buyer.

BASF warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes referred to in the Directions For Use, subject to the inherent risks, referred to above.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BASF MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS OR MERCHANTABILITY OR ANY OTHER EXPRESS OR IMPLIED WARRANTY.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BUYER’S EXCLUSIVE REMEDY AND BASF’S EXCLUSIVE LIABILITY, WHETHER IN CONTRACT, TORT, NEGLIGENCE, STRICT LIABILITY, OR OTHERWISE, SHALL BE LIMITED TO REPAYMENT OF THE PURCHASE PRICE OF THE PRODUCT.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BASF AND THE SELLER DISCLAIM ANY LIABILITY FOR CONSEQUENTIAL, EXEMPLARY, SPECIAL OR INDIRECT DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT.

BASF and the Seller offer this product, and the Buyer and User accept it, subject to the foregoing Conditions of Sale and Warranty which may be varied only by agreement in writing signed by a duly authorized representative of BASF.
Zidua® SC
Herbicide

For weed control in corn, cotton, soybean, and wheat

Active Ingredient:
pyroxasulfone: 3-[[5-(difluoromethoxy)-1-
methyl-3-[(trifluoromethyl)-1H-pyrazol-4-yl]
methyl]sulfonyl]-4,5-dihydro-5,5-dimethylisoxazole . . . 41.46%
Other Ingredients: ........................................ 58.54%
Total: ........................................ 100.00%

Contains 4.17 pounds of pyroxasulfone per gallon formulated as a water-based suspension concentrate

EPA Reg. No. 7969-374        EPA Est. No. 241-PR-002

KEEP OUT OF REACH OF CHILDREN
CAUTION/PRECAUTION

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

See attached booklet for complete First Aid, Precautionary Statements, Directions For Use, Conditions Of Sale and Warranty, and state-specific crop and/or use site restrictions.

In case of an emergency endangering life or property involving this product, call day or night 1-800-832-HELP (4357).

Shake container well before use.

FIRST AID: If swallowed: Call a poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. DO NOT induce vomiting unless told to do so by the poison control center or doctor. DO NOT give anything to an unconscious person. If on skin: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15 to 20 minutes. Call a poison control center or doctor for treatment advice. If in eyes: Hold eyes open and rinse slowly and gently with water for 15 to 20 minutes. Remove contact lenses, if present, after first 5 minutes; then continue rinsing eyes. Call a poison control center or doctor for treatment advice. If inhaled: Move person to fresh air. If person is not breathing, call 911 or an ambulance; then give artificial respiration, preferably by mouth to mouth if possible. Call a poison control center or doctor for further treatment advice.

HOTLINE NUMBER: Have the product container or label with you when calling a poison control center or doctor or going for treatment. You may also contact BASF Corporation for emergency medical treatment information at 1-800-832-HELP (4357).

Precautionary Statements

Hazard to Humans and Domestic Animals

CAUTION. Harmful if swallowed. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet.

Environmental Hazards

DO NOT apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. DO NOT contaminate water when disposing of equipment washwater or rinsate.

DO NOT discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans, or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. DO NOT discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance, contact your State Water Board or Regional Office of the EPA.

Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas. See attached booklet for complete Environmental Hazards, Groundwater and Surface Water Advisories, and Endangered Species Requirements.

STORAGE AND DISPOSAL

DO NOT contaminate water, food or feed by storage or disposal. Open dumping is prohibited.

Pesticide Storage

DO NOT use or store near heat or open flame. Store in original container in well-ventilated area separately from fertilizer, feed, or foodstuffs. Avoid cross-contamination with other pesticides.

Pesticide Disposal

Wastes resulting from the use of this product may be disposed of on-site or at an approved waste disposal facility. Improper disposal of excess pesticide, spray mix, or rinsate is a violation of federal law. If these wastes cannot be disposed of according to label instructions, contact the state agency responsible for pesticide regulation or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container Handling

Nonrefillable Container. DO NOT reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying; then offer for recycling, if available, or reconditioning, if appropriate, or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures approved by state and local authorities.

See attached booklet for complete container handling directions including triple rinsing and pressure rinsing instructions.
