Bottom Gusset
Y-TEX®
XP 820® Insecticide Cattle Strip

- No withdrawal time required.
- Guaranteed against loss due to strip breakage.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Reformulation or repackaging of this product is prohibited. This labeling must be in the possession of the user at the time of pesticide application.

Precautions and Restrictions:
- Only protected handlers may be in the area during application.
- Do not use strips on lactating dairy cows.

Apply strips as directed below for Horn Flies and Gulf Coast Ticks:
- Horn Flies: 1 strip/animal (1 strip per ear) to aid in control for 2 to 3 months.
- Gulf Coast Ticks: 2 strips/animal (1 strip per ear) to aid in control for 2 to 3 months.

Apply strips as directed below for the listed pests:
- Sowbee Ear Ticks: 2 strips/animal (1 strip per ear) to aid in control for up to 2 to 3 months.
- American Dog Ticks: 2 strips/animal (1 strip per ear) to aid in control for up to 2 to 3 months.
- Cattle Fever Ticks (Glossiphonia species): 2 strips/animal (1 strip per ear) to aid in control for up to 2 to 3 months.
- Loma Star Ticks: 2 strips/animal (1 strip per ear) to aid in control for up to 2 to 3 months.
- Face Flies (Musca autumnalis): 2 strips/animal (1 strip on the side of each ear) to aid in control for up to 2 to 3 months.

For use on only 10 strips that are applied to the animal's coat has completely healed. Preferably use with 12 strips that were directed in the previous season or earlier. In cases where there is only one established site location, an XP 820 Insecticide Cattle Ear Tag can be applied to the other ear for optimum protection.

Application can never exceed 2 strips per animal; 1 strip per animal; or 1 strip and 1 tag per animal.

Apply as shown over the following of any existing 2 strips as indicated, using the XP 820 Insecticide Cattle Ear Tag to aid in control for up to 2 to 3 months. If ID tags are not present in both ears, an XP 820 Insecticide Cattle Ear Tag can be applied to the other ear for optimum protection.

Apply as directed on the XP 820 Insecticide Cattle Ear Tag box. Application can never exceed 2 strips per animal; 1 strip per animal; or 1 strip and 1 tag per animal.

Apply as shown when attaching to male/female combination 10 strips or one piece 10 strips by folding leg tag and placing leg through the "key hole" in strip and sliding the strip up and over the shelf of the leg tag system. It is not recommended to place the strips on the back of a one piece 10 strip.

Apply when flies or lice become a problem. As necessary, up to two treatments per year. All animals in the herd should be treated to avoid dilution of the treatment. To minimize development of resistant resistance in horn flies, remove used strips and/or tags at the end of the season and follow Y-TEX's recommended insecticide rotation program. Remove strips and/or tags before slaughter.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

PESTICIDE STORAGE: Store in cool, dark place away from sunlight in original container. Opened tags containing ear strips or tags should be isolated for storage.

PESTICIDE DISPOSAL: Securely wrap used strips and tags in a plastic bag or several layers of newspaper and discard in trash.

CONTAINER DISPOSAL: Offer for recycling (if available). Do not reuse bag. Discard bag in trash.

FIRST AID

This product contains amethicin, a microcyclic lactone, and piperonyl butoxide, a mixed-function oxidase inhibitor.

If swallowed:
- Call a poison control center or doctor immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- Do not induce vomiting unless told to by a poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

NOTICE TO USER

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-800-255-9204 for emergency medical treatment information.

KEEP OUT OF REACH OF CHILDREN
