TO REDUCE INFECTION BY VIRUS (PVY) IN POTATOES GROWN FOR SEED:

LifeGard™ WG may be tank-mixed or applied in rotation with labeled fungicides as part of a disease management program.

Make the first application 60-65 days after planting. Repeat application at 14 day intervals as long as aphid vectors are present and conditions are favorable to infection.

LifeGard™ WG may also be applied in the following manner:

1. The system must contain a functional check valve, vacuum relief valve, and low pressure alarm. The pump (i.e., diaphragm pump) must be designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

2. The pesticide injection pipeline must contain a functional, automatic, quick-closing valve to prevent the flow of fluid back toward the injection pump.

3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

4. If no prebloom applications have been made, then combine LifeGard™ WG applicator with sufficient agitation to maintain a uniform suspension in the spray or mixing tank.

5. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide injection pump when the water pump motor stops or, in cases where there is no water pump, when the water pressure decreases to the point where pesticide injection is adversely affected.

6. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops or, in cases where there is no water pump, when the water pressure decreases to the point where pesticide injection is adversely affected.

7. The dilution of the product in water following the label mixing directions. It may be pre-diluted before mixing if a homogenous suspension is not achieved.

8. Systems must use a metering pump, such as a positive displacement injection pump (i.e., diaphragm pump) at a rate of 1 to 5 gallons per hour per cycle.

9. It is the responsibility of the grower to maintain a proper supply of clean water to the system to provide for the mixing ratio desired.

10. If a water pump is not present, then the pesticide injection pipeline must be clamped off before the starting of the water pump motor.

11. Do not connect an irrigation system (including greenhouse systems) used for pesticidal application or with hand-held calibrated irrigation equipment (such as a hand-held wand with an integral metering device) to a public water system.

To Reduce Occurrence and Severity of Plant Disease on Listed Crops Grown Outdoors Or In Greenhouses, Shadehouses Or Other Covered Environments

CHEMIGATION INSTRUCTIONS

General information:

Apply this product only through overhead sprinkler irrigation systems, including impact or microsprinklers, overhead boom, or solid set, including micro-tine systems, or with hand-held calibrated irrigation equipment (such as a hand-held wand with injector). Do not apply this product through any other type of irrigation system.

Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.

If you have questions about calibration, contact State Extension Service specialists, equipment manufacturers or other experts.

Do not connect an irrigation system (including greenhouse systems) used for pesticidal application to a public water system unless the pesticide-label specified safety devices for public water systems are in place.

To the extent consistent with applicable law, buyer for use. Timing and method of application, weather, watering practices, nature of soil, the disease problem, condition of the crop, incompatibility with other chemicals not specifically recommended and other influencing factors in the use of this product are beyond the control of the seller. To the extent consistent with applicable law, buyer assumes all risk of use, storage, handling or use of the material not in accordance with directions given herein. NO OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS FOR MERCHANTABILITY IS MADE.

**If thalated**: Move person to fresh air. If person is not breathing, call 911 or if available, then artificial respiration, preferably mouth-to-mouth if possible. Call a physician immediately.

If in eyes: Hold eye open and rinse slowly with water for at least 15 minutes. Remove contact lenses if present and continue rinsing eye. Call a physician immediately.

If on clothing: Remove contaminated clothing and wash skin thoroughly with soap and water. Call a physician immediately.

**HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

Hazardous if inhaled. Causes moderate eye irritation. Avoid breathing dust or fumes. Do not ingest. Do not inhale dust or fumes. Do not inhale dust or fumes. Do not inhale dust or fumes.

**PRECAUTIONARY MEASURES**

**FIRST AID**

**Personal protection and label use**

- Wear a chemical-resistant glove or rubber glove when handling the product.
- Avoid direct skin contact, especially across exposed skin.
- Avoid breathing dust or fumes. Do not inhale dust or fumes.

**FIRST AID**

- **For all**: If exposure occurs, remove contaminated clothing and wash skin thoroughly with soap and water. Call a physician immediately.

**HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

Hazardous if inhaled. Causes moderate eye irritation. Avoid breathing dust or fumes. Do not ingest. Do not inhale dust or fumes. Do not inhale dust or fumes. Do not inhale dust or fumes.

**PRECAUTIONARY MEASURES**
