EXILE™ Insecticide / Fungicide / Miticide

For control of listed insect and mite pests and powdery mildew on indoor (greenhouse and artificially illuminated controlled atmosphere environments) and outdoor grown marijuana in compliance with all relevant Washington State laws.

EPA Reg. No. 91865-2
EPA SLN No. WA-170008

This label for General Hydroponics Exile Insecticide / Fungicide / Miticide expires and must not be distributed or used in accordance with this SLN registration after December 31, 2022

- It is a violation of federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Follow all applicable directions, restrictions, Worker Protection Standard requirements and precautions on the EPA-registered label.

DIRECTIONS FOR USE

Refer to product label affixed to General Hydroponics Exile Insecticide / Fungicide / Miticide container for General Use Precautions, Mixing, and Application instructions.

Controls listed insect and mite pests and powdery mildew on indoor (greenhouse and artificially illuminated controlled atmosphere environments) and outdoor grown marijuana.

Pests Controlled
This product may be used as a foliar spray to control or suppress soft bodied pests: aphids, spider mites, thrips, and whiteflies. General Hydroponics Exile Insecticide / Fungicide / Miticide is most effective on aphids, spider mites, and whiteflies. Effects on other pests are limited to early growth stages and eggs. This product provides curative control of powdery mildew.

MIXING AND APPLICATION

RATES:

Stand Alone Rate: General Hydroponics Exile Insecticide / Fungicide / Miticide rates as low as 0.25% v/v or as high as 4% v/v may be used. Use of the 4% v/v rate is limited to severe infestations to reduce pest pressure prior to rotating to a product with less rapid activity such as Azamax Botanical Insecticide / Miticide / Nematicide. The 2% v/v rate is the most frequently used stand-alone rate.

Rates are provided as a % volume/volume (v/v) solution. A 2% solution is prepared by adding 2 gallons of Exile to 98 gallons of spray water.

The activity of this product is directly related to the solution concentration and to contact with the pest, not the amount of product applied per acre.
Tank Mix Rate: To achieve enhanced and residual pest control, use a 1 to 2% v/v solution of this product in combination with a specified product.

MIXING:
Always determine the compatibility of water, pesticides and other tank additives with this product prior to addition to the spray tank. Determine compatibility by conducting a jar test using proportional quantities of each material.

Use freshly mixed spray made with soft water. If water has high mineral content (hardness >300 ppm or 17.5 grains/gallon), check for compatibility as described above. If needed, add an approved compatibility agent to the tank prior to the addition of this product. Do not lower the pH of the final spray mixture below 8.0.

A defoaming agent may be needed for use in sprayers equipped with an agitator.

This product is compatible with other labeled pesticides, including Bt based insecticides. However, when tank mixing General Hydroponics Exile Insecticide / Fungicide / Miticide with other products, a compatibility test (jar test) using relative proportions of the tank mix ingredients should be conducted prior to mixing ingredients in the spray tank. When tank mixing, read and carefully follow all applicable use directions, precautions, and limitations on the respective product labels. In interpreting all labels for the tank mix, the most restrictive situations must apply. All tank mix products must be allowed for use on marijuana in Washington.

Unless otherwise noted, do not tank mix this product with adjuvants such as penetrators, spreader stickers or activators, gibberellic acid, calcium nitrate, or diatomaceous earth, foliar nutrients, alkaline based chelating agents (such as EDTA), and pesticides containing sulfur or metallic ions (such as manganese, magnesium, iron, zinc, etc.) as they may be physically incompatible and/or phytotoxic.

Do not mix General Hydroponics Exile Insecticide / Fungicide / Miticide with sulfur. Do not use within 3 days of a sulfur application.

When using this product in a tank mix, read and follow all product labels. The order of mixing is:
1) Compatibility agent (if needed)
2) Wettable and soluble powders
3) Flowable liquids
4) Emulsifiable oils and concentrates
5) General Hydroponics Exile Insecticide / Fungicide / Miticide

Application of spray mixtures should conform to use precautions and directions for all products included in the tank mix. Combinations should be kept agitated and sprayed promptly after mixing.
TIMING OF APPLICATION
Initiate applications as soon as pest is observed, or as needed to avoid economic injury. Repeat applications at one-week intervals, or as needed, to control infesting or increasing pest populations.

Do not make repeat applications at less than 7-day intervals, or make more than 3 sequential applications at 7- to 14-day intervals unless your experience has shown the use pattern to be non-injurious to the type and the development stage of plant(s) to be treated under local growing conditions.

APPLICATION GUIDELINES
This product may be applied with most types of ground spray equipment.

This product must come into contact with the targeted soft-bodied pests or powdery mildew to be effective. Complete coverage of pests is essential for maximum control. Direct sprays to contact the pests. In general, adequate coverage requires a minimum of 50 gallons of total spray volume per acre.

Apply General Hydroponics Exile Insecticide / Fungicide / Miticide solutions to wet (minimize run-off) to decrease the potential for injury on foliage and flowers of sensitive plants.

Apply promptly after mixing with other pesticides to avoid or reduce alkaline hydrolysis of certain pesticides.

Avoid applications when wind conditions impair thorough coverage.

Avoid applications on new transplants and unrooted cuttings.

Restrictions/Precautions:
- Restricted Entry Interval (REI): Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.
- Pre-Harvest Interval (PHI): General Hydroponics Exile Insecticide / Fungicide / Miticide can be applied up to and including the day of harvest.
- Maximum use rate: Do not apply more than 1.3 fl oz (39.3 ml) per 1,000 sq. ft. per application.
- Do not apply through any type of hydroponic system. Do not use with pulse or thermal fogger applicators. Do not apply through any type of irrigation system.
- This product should only be applied using equipment that was specifically designed and manufactured for applying pesticides.
- This product may be hazardous to aquatic invertebrates. General Hydroponics Exile Insecticide / Fungicide / Miticide should not be used in accordance with this SLN label where impact on listed threatened or endangered species is likely. You may refer to the WSDA Natural Resources Assessment Section web site at agr.wa.gov/PestFert/NatResources/EndangSpecies.aspx, or contact the Washington Department of Fish & Wildlife, National Marine Fisheries Service (NOAA Fisheries) or US Fish & Wildlife Service for information regarding aquatic species listed as threatened or endangered. Consult the federal label for additional restrictions and precautions to protect aquatic organisms.

WSDA Container Disposal Guidance
Pesticide containers must be properly cleaned prior to disposal. The best time to clean empty pesticide containers is during mixing and loading, because residue can be difficult to remove after it dries. Triple rinse (or pressure rinse) the pesticide container, empty all pesticide rinse water into the spray tank, and apply to a labeled crop or site. Recycling cleaned containers is the best method of container disposal. Information regarding the recycling of empty and cleaned plastic pesticide containers in Washington is available on the WSDA Waste Pesticide Program web site at agr.wa.gov/PestFert/Pesticides/WastePesticide.aspx. Cleaned containers may also be disposed of in a sanitary landfill, if permitted by the county. Burning is not a legal method of container disposal in Washington.
NOTICE ON CONDITIONS OF SALE

The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this product. Plant injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, method of use or application, and other factors, all of which are beyond the control of General Hydroponics. To the extent consistent with applicable law, all such risks shall be assumed by the user or buyer.
