<td>Use 1 pound of product per acre per application.</td>
<td>Ground – Apply in 10 to 60 gallons of water per acre. Air - Apply in 5 to 10 gallons of water per acre.</td>
<td>A single application may be made up to 3 days prior to placing bees in or around the field, or after removing bees from the field. Do not make more than one application per acre per year. The Restricted Entry Interval (REI) is 12 hours. Some data indicate that Leafcutter bees and Alkali bees may be more sensitive to acephate exposure than other tested species.</td>

RESTRICTIONS/PRECAUTIONS

1. Alfalfa seed from treated fields shall not be used for growing sprouts for humans or animal consumption.
2. For use in accordance with this SLN label, do not apply this product through any type of irrigation system.
3. Do not apply product in such a manner as to directly, or through drift, expose workers or other persons.
4. The area being treated must be vacated by unprotected persons.
5. This product may pose a hazard to endangered aquatic species. Refer to and follow the spray drift precautions on the U.S. EPA registered label for this product.
6. Rotation crops may be planted no sooner than 30 days after the last application.
7. This product and its degradate are highly toxic to bees exposed to direct treatment on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops or weeds while bees are foraging the treatment area.
8. Special Crop Use Restrictions- Crops Grown for Seed
   a. All alfalfa seed screenings shall be disposed of in such a way that they cannot be distributed or used for human food or animal feed. The seed conditioner shall keep records of screening disposal for three years from the date of disposal and shall furnish the records to the director immediately upon request. Conditioner disposal records shall consist of documentation of on-farm disposal, disposal at a controlled dumpsite, incinerator, composter or other equivalent disposal site and shall include the lot numbers, amount of material disposed of, the grower(s), and the date of disposal.
   b. No portion of the alfalfa seed plant, including but not limited to green chop, hay, pellets, meal, whole seed, cracked seed, roots, bulbs, leaves and seed screenings may be used or distributed for food or feed purposes.
   c. Alfalfa seed shall bear a tag or container label, which forbids use of the seed for human consumption or animal feed.
   d. Alfalfa seed may not be distributed for human consumption or animal feed.
10. Residual Toxicity (RT) Information:
    Residual toxicity is defined as the length of time over which field weathered foliar residues remain toxic to honey bees, or other species of terrestrial insects. This product has an RT value of greater than 3 days. To avoid residual action against bees, do not introduce leafcutter bees until a period of 72 hours has elapsed.

WSDA Container Disposal Guidance: Pesticide containers must be properly cleaned prior to disposal. The best time to clean empty pesticide containers is during mixing and loading, because residue can be difficult to remove after it dries. Triple rinse (or pressure rinse) the pesticide container, empty all pesticide rinse water into the spray tank, and apply to a labeled crop or site. Recycling cleaned containers is the best method of container disposal. Information regarding the recycling of empty and cleaned plastic pesticide containers in Washington is available on the WSDA Waste Pesticide Program web site at http://agr.wa.gov/PestFert/Pesticides/WastePesticide.aspx. Cleaned containers may also be disposed of in a sanitary landfill, if permitted by the county. Burning is not a legal method of container disposal in Washington.
