Cleaning Procedure: Fecal matter/waste must be thoroughly cleaned from surfaces/objects before disinfection by application with CaviCide Bleach. Cleaning is to include vigorous wiping and/or scrubbing, until all visible soil is removed. Special attention is needed for high-touch surfaces. Surfaces that are soiled in patient rooms are to be cleaned in an appropriate manner, such as from right to left or right, on horizontal surfaces, and to bottom to top, on vertical surfaces, to minimize spreading of the sores. Restrooms are to be cleaned last. Do not use CaviCide Bleach on porous surfaces.

Disposal of Infectious Materials: Disposal used in the cleaning process that may contain feces/wastes are to be disposed of immediately in accordance with local regulations for infectious materials disposal.

This product is not to be used as a terminal sterilant/high level disinfectant.

The product is a multi-purpose cleaner/dischlantar for use on hard, non-porous surfaces.

CaviCide Bleach is a multi-purpose cleaner/disinfector for use on hard, non-porous surfaces.

Bacteria
Clostridium difficile spores, Staphylococcus aureus, Pseudomonas aeruginosa, Salmonella enterica
Burkholderia cepacia, Escherichia coli O157:H7
Klebsiella pneumoniae, Legionella pneumophila
Listeria monocytogenes, Serratia marcescens
Neisseria gonorrhoeae

Drug-Resistant Bacteria
Enterobacter cloacae, Multidrug Resistant Acinetobacter baumannii (MDRAB), Candida species, C. albicans, C. glabrata, C. tropicalis, Cryptococcus neoformans
Staphylococcus aureus (MRSA) • Penicillin Resistant Streptococcus pneumoniae (PRSP)
Staphylococcus aureus (VRSA) • Vancomycin Resistant Enterococcus faecium (VREF) • Escherichia coli ESBL
Myco-bacterium
Mycobacterium tuberculosis var. bovis (BCG) • Mycobacterium Tuberculosis
Candida albicans • Aspergillus brasiliensis
Trichophyton mentagrophytes (formerly Trichophyton mentagrophytes)

Non-enveloped Viruses*
Adenovirus • Hepatitis A • Feline Calicivirus Surrogate for Norovirus • Polyomavirus, Chat Strain • Rhinovirus
Enterovirus (EV-D68) • Rotavirus

Enveloped Viruses*
Herpes simplex virus (type 1) • Herpes simplex virus (type 2) • Human Coronavirus • Influenza A virus strain A/Hong Kong/68 (H3N2) • Influenza B virus strain B/Hong Kong/3/72 • Duck Hepatitis B virus (HBV) • Bovine Leukemia Virus (BLV) • Deltapapavirus C (virus) • HIV-1 (human Immunodeficiency Virus type 1) • Respiratory syncytial virus (RSV)

DESCRIPTION
CaviCide Bleach is recommended for use on hard non-porous surfaces of infant incubators (interior and exterior surfaces), operating room tables and lights, physical therapy (PT) and occupational therapy (OT) equipment, items that contact surfaces of ultrasonic machines, external surfaces of ultrasonic monitors, external surfaces of ultrasonic transducers, interior surfaces of IV bags and syringes, exterior surfaces of glucometers, IV poles, ambulance equipment and computer keyboards, external surfaces of N pumps. Always refer to manufacturer’s care instructions before using on equipment or devices.

CaviCide Bleach is recommended for use on hard non-porous surfaces in medical facilities, ambulatory surgery centers, operating rooms, short-term care facilities, neonatal intensive care units (NICU), skilled nursing facility, home healthcare, schools, dental office, ambulances, physicians’ offices.

DIRECT APPLICATION
For use as a cleaning and pre-decontamination immersion solution. Place instruments in a container with a sufficient amount of CaviCide Bleach Virus Hepatitis (HIV) and Hepatitis C (HCV) without contact with skin. Submergence, cover and immerse for 5 minutes. Remove and rinse instruments, following appropriate decontamination process. Discard solution after each use.

For use as a cleaning and pre-decontamination spray: Place instruments in a container. Spray CaviCide Bleach directly onto surface, to thoroughly drench all instrument surfaces and allow to remain visibly wet for 30 seconds. Remove and rinse instruments. Follow with appropriate disinfection process.

For use as a DISINFECTANT ON NON-STERILE SURFACES: Spray CaviCide Bleach directly onto surfaces, thoroughly wetting area to be disinfected. Allow surface to remain visibly wet for 3 minutes. Wipe surface using a cloth that allows to air dry. Glossy and heavy soil loads must be removed prior to disinfecting.

DIRECT APPLICATION: Directly pour CaviCide Bleach with a cloth/tribe/towel and wet surfaces completely. Let surface remain visibly wet for 3 minutes. Let air dry. Glossy and heavy soil loads must be removed prior to disinfecting.

For use as a DISINFECTANT ON HARD, NON-POOROUS SURFACES OF NON-CRITICAL MEDICAL DEVICES* • INSTRUMENTS & IMPLEMENTS:

Instruments must by thoroughly cleaned to remove excess organic debris, rinsed and dried. Thoroughly clean and rinse lumen of hollow devices. Spray CaviCide Bleach directly onto surface, thoroughly wetting area to be disinfected. Allow surface to remain visibly wet for 3 minutes. Remove and rinse instruments. Wipe dry prior to use.

*Non-critical medical devices are items that come in contact with intact skin.

Note: Critical and semi-critical devices must be followed by appropriate terminal sterilization/hygiene disinfection process.

To disinfect external surfaces of ultrasonic transducers: Pre-clean ultrasonic gel from external transducer to be disinfected by using a clean wash cloth. Spray CaviCide Bleach directly onto surface, allowing for complete drying. Allow surface to remain visibly wet for 3 minutes.
