**Time application for when adult weevils leave their overwintering sites and move into grass areas.**

**Apply as late in the day as possible to moist soil (irrigate before application if necessary), and water in with up to 0.5 inches of water immediately after application to ensure they fall through any thatch.**

**Apply granules in the summer when beetles are seen. Water granules in immediately after application to ensure they fall through any thatch.**

**Remove trash, debris, or firewood that scorpions may use as resting sites prior to treatment.**

**Do not give anything by mouth to an unconscious person.**

**Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.**

**Call poison control center or doctor immediately for treatment advice.**

**PESTS TREATS UP TO 25,000 SQ FT**

**TRUSTED BRAND FOR OVER 50 YEARS**

**Setting Broadcast Spreaders Rate (lbs/1,000 ft2)**

**DIRECTIONS FOR USE**

**Fruit & Vegetable Garden Application:**

- Best results are obtained if the treated area is thoroughly watered immediately after application.
- Applications to Control Existing Infestations:
  - Repeat application is necessary only if there are signs of renewed insect activity.
  - The next 24 hours will help to ensure that wind or rain does not blow or wash pesticide off the treatment area.
  - Sweeping any product that lands on a roof or other hard surface will help to prevent movement by wind or water.

**Residential Lawn Application:**

- Do not make applications during rain.
- Best results are obtained if the treated area is thoroughly watered immediately after application.
- Repeat application is necessary only if there are signs of renewed insect activity.
- The next 24 hours will help to ensure that wind or rain does not blow or wash pesticide off the treatment area.
- Sweeping any product that lands on a roof or other hard surface will help to prevent movement by wind or water.

**LAWN, PERIMETER, and GARDEN APPLICATIONS**

- Do not make applications during rain.
- Best results are obtained if the treated area is thoroughly watered immediately after application.
- Repeat application is necessary only if there are signs of renewed insect activity.
- The next 24 hours will help to ensure that wind or rain does not blow or wash pesticide off the treatment area.
- Sweeping any product that lands on a roof or other hard surface will help to prevent movement by wind or water.
