**Spray Volume:**
**Ground application:**
Use a minimum spray volume of 20-25 gallons per acre. Always add a nonionic surfactant containing 75% or more surface active agent at 0.125% v/v (1 pint per 100 gallons), OR add a nonionic surfactant containing 50-74% surface-active agent at 0.25% v/v (2 pts/100 gallons) of the finished spray volume for ground applications.

**Aerial application:**
Use a minimum spray volume of 5-10 gallons per acre. Always add a nonionic surfactant at 0.25% v/v (2 pts/100 gallons) of the finished spray volume.

**Method of Application:** Broadcast

**Frequency and Timing of Applications:** One application is generally all that is needed. If a second application is needed apply at least 4 days prior to the...
planned harvest date.

Chemigation: For use under this SLN label, do not apply this product through any type of irrigation system.

See “RESTRICTIONS/PRECAUTIONS”

RESTRICTIONS/PRECAUTIONS:

- Do not enter or allow worker entry during the restricted-entry interval (REI) of 24 hours.
- When using this product in Eastern Washington, refer to WSDA rules regarding the use of desiccant herbicides. Refer to spray drift information contained in the “Directions for Use” section for proper application to avoid off-target movement. Do not apply when weather conditions favor drift from treated areas.
- Do not make more than 2 applications per crop per year. The maximum annual application rate is 5.33 pts/A (85.3 fl oz/A) per year.
- Do not harvest until at least 4 days after application.
- Do not apply by ground equipment within 25 ft. or by air within 75 ft. of lakes; reservoirs; rivers; permanent streams, marshes or natural ponds; estuaries; and commercial fish ponds.
- All alfalfa seed screenings must be disposed of in such a way that they cannot be distributed or used for human food or animal feed. The seed conditioner must keep records of screening disposal for 3 years from the date of disposal and shall furnish the records to the director immediately upon request. Conditioner disposal records must consist of documentation of on-farm disposal, disposal at a controlled dumpsite, incinerator, composter, or other equivalent disposal site and must include the lot numbers, amount of material disposed of, its grower(s), and the date of disposal.
- No portion of the alfalfa seed plant, including but not limited to green chop, hay, pellets, meal, whole seed, cracked seed, roots, bulbs, leaves and seed screenings may be used or distributed for food or feed purposes.
- Alfalfa seed must bear a tag or container label which forbids use of the seed for human consumption or animal feed.
- Alfalfa seed may not be distributed for human consumption or animal feed.

WSDA CONTAINER DISPOSAL GUIDANCE: Pesticide containers must be properly cleaned prior to disposal. The best time to clean empty pesticide containers is during mixing and loading, because residue can be difficult to remove after it dries. Triple rinse (or pressure rinse) the pesticide container, empty all pesticide rinse water into the spray tank, and apply to a labeled crop or site. Recycling cleaned containers is the best method of container disposal. Information regarding the recycling of empty and cleaned plastic pesticide containers in Washington is available on the WSDA Waste Pesticide Program web site at http://agr.wa.gov/PestFert/Pesticides/WastePesticide.aspx. Cleaned containers may also be disposed of in a sanitary landfill, if permitted by the country. Burning is not a legal method of container disposal in Washington.
