Restrictions Use Pesticide

Due to acute inhalation toxicity of phosphine gas

For outdoor use on and around buildings and structures, supervised, and only by those uses covered by

Phosphine is extremely toxic if inhaled. Inhalation of even small amounts can cause death. Once inhaled, symptoms may not be apparent until several hours after exposure.

Phosphine is highly soluble in water and is found in the environment in the form of phosphine gas and its associated chemical, phosphine oxide. Phosphine gas is odorless, tasteless, and colorless, making it difficult to detect.

To avoid phosphine poisoning, it is important to take precautions when using products containing phosphine. These precautions include:

- Always read and follow the directions on the product label.
- Keep products away from children and pets.
- Avoid inhaling phosphine gas, especially in poorly ventilated areas.
- Use phosphine products only as directed.

Storage and Disposal

Do not store or use the product in the same areas used to store these commodities.

Storage Instructions

Keep the product in its original container in a cool, dry, well-ventilated area away from heat, light, and sources of ignition. Do not leave the product unattended in the presence of children or pets. Store the product in a location that is inaccessible to unauthorized users.

Storage should be in a secure location, accessible only to trained personnel.

Transportation

Prepare the product container for transportation in accordance with the International Code of Practice for the Safe Transport of Chemicals (ICP). The product container must be properly labeled and secured to prevent damage during transportation.

For specific transportation instructions, contact your local transportation company or the shipping agency.

Emergency Response

If a product spill occurs, follow the emergency response procedures provided in the Product Label.

Notify local emergency responders immediately, and provide them with the following information:

- Product name and label number
- Quantity and type of product
- Spill location and extent
- Any chemicals or materials involved in the spill

Emergency responders should follow standard operating procedures for handling chemical spills and should wear appropriate personal protective equipment.

For additional information, contact the manufacturer or the local emergency response agency.

For specific emergency response procedures, contact your local emergency response agency or the nearest EPA Regional Office for guidance.

For specific instructions, contact your state Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.
