SOFT BAIT

FASTRAC®
SOFT BAIT**

**Norway rats, Roof rats and House mice usually consume a lethal dose in a single night's feeding, but it may take two or more days from the time of bait consumption for these rodents to die.

KILLS RATS, MICE, AND MEADOW VOLES*
KILLS ANTICOAGULANT RESISTANT NORWAY RATS, ROOF RATS AND HOUSE MICE

KEEP OUT OF REACH OF CHILDREN
CAUTION

See back panels for First Aid, additional Precautionary Statements, and Directions for Use.

ACTIVE INGREDIENT:
Bromethalin (CAS #63333-35-7) . . . . . . . . . . . . . . . . 0.01%
OTHER INGREDIENTS†. . . . . . . . . . . . . . . . . . . . . . 99.99%
†Contains Denatonium Benzoate

TOTAL 100.00%

*Not permitted for use against the following species in California: Cotton rat, Eastern harvest mouse, Golden mouse, Polynesian rat, Meadow vole, White-throated woodrat, Southern plains woodrat, and Mexican woodrat.

Product Code: XXXXXX
10891819-19

NET WT: 4 lbs (1.81 kg)

FIRST AID

If Swallowed:  Call a poison control center or doctor immediately. Do not induce vomiting unless told to do so by a poison control center or doctor.

If in Skin or Clothing:  Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes.

If in Eyes:  Hold eye open and rinse slowly and gently with water for 15-20 minutes.

Treatment for Overdose:  No specific treatment known. General supportive care is recommended. Do not induce vomiting and provide supportive care until effects of poison have subsided. Call a Poison Control Center or doctor immediately if symptoms occur.

SEVERE OVERDOSE RISK: Laboratory animals may die following exposure to the active ingredient in this product.

PROTECTIVE CLOTHING AND EQUIPMENT

For all uses, wear protective clothing and equipment, including:

- Full face mask
- NIOSH/NIOSH-approved respirator
- Self-contained breathing apparatus
- Goggles or face shield
- Safety gloves
- Safety shoes
- Non-skid footwear

TREATMENT FOR POISONING

If an animal eats this bait, call a veterinarian at 1-877-864-2494 at once.

NOT TO PERFORMANCE OR VETERINARY

Contains the nerve poison bromethalin. This product is not an anticoagulant type rodenticide. For humans or
animals ingesting bait and/or showing poisoning signs (such as muscle tremors, loss of limb use, or
olfactory), ablation by either reflexes or gastric lavage. Sublethal symptoms, if present, would be the result of cerebral edema and should be treated accordingly through administration of an osmotic diuretic and corticosteroid.

PRECAUTIONARY STATEMENTS

Hazard to Humans and Domestic Animals

CAUTION: Harmful if swallowed or absorbed through the skin. Causes moderate eye irritations. Avoid contact with eyes, skin or clothing. Keep away from children, domestic animals and pets. All handlers (including applicators) must wear waterproof gloves, long-sleeved shirt and pants, and shoes and socks. Do not contaminate water, food or feed by storage or disposal.

ENVIRONMENTAL HAZARDS

This product is extremely toxic to mammals and birds. Dogs and other predators and scavenging mammals and birds might be poisoned if they feed upon animals that have eaten this bait. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment wash water or rainwater.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. READ THIS LABEL: Read the entire label and follow all use directions and use precautions. Use only for the sites, pests, and application methods described on this label.

Keep out of reach of children and pets.

DANGER:

- Do not contaminate water, food or feed by storage or disposal.

Information about safety hazards:

Mammals: Due to Stop Feed Action, Rats and Mice typically Feed Less or Cease Feeding Altogether After Consuming a Lethal Dose.

NON-PET USE OF FASTRAC®-Soft Bait: This product is not intended for the relief of pest infestations on farms, ranches, gardens, lawns or on the exterior of buildings. Do not apply to areas or objects where children, pets, or nontarget wildlife or birds may have access to the bait.

Do not sell this product in individual containers holding less than 4 pounds of bait.

SeCLUSION OF TREATMENT AREAS: Determine areas where rats, mice, or meadow voles will most likely find and consume bait. Generally, these are along walls, by gravel openings, in corners and concealed places, between floors or walls, or in locations where rats, mice, or meadow voles, or their signs have been observed. Remove as much alternative food as possible.

APPLICATION DIRECTIONS: The active ingredient in this product is different from anticoagulant rodenticides. Individual rats and mice typically feed less or cease feeding altogether after consuming a toxic dose. Bait may be removed from the sachet and placed in a feeding device that secures the unwrapped bait in a bait station. Discard empty wrapper in the trash.

Rats: Place 3 to 10 sachets per placement (usually at intervals of 15- to 30-foot intervals) in infested areas. Adjust the amount of bait applied to the level of rat feeding expected at each bait placement.

Mice and Meadow Voles: Apply bait in accessible areas, especially near feeders or bait stations. In areas under 100 square feet, apply bait in areas where children, pets, or nontarget wildlife or birds may have access to the bait.

Burrow baiting with FASTRAC®-Soft Bait is prohibited.

The active ingredient in this product is different from anticoagulant rodenticides. Individual rats and mice typically feed less or cease feeding altogether after consuming a toxic dose. Bait may be removed from the sachet and placed in a feeding device that secures the unwrapped bait in a bait station. Discard empty wrapper in the trash.

Rats: Place 3 to 10 sachets per placement (usually at intervals of 15- to 30-foot intervals) in infested areas. Adjust the amount of bait applied to the level of rat feeding expected at each bait placement.

Mice and Meadow Voles: Apply 1 to 2 sachets per placement. Space placements at intervals of 6- to 12-foot intervals in infested areas. Larger placements, up to 3 sachets, may be needed at points of extremely high mouse or meadow vole activity.

Baiting Strategy: Highest bait consumption is expected to occur on the first day or two after treatment begins. After several days, inspect the placement and replenish bait at sites where there is evidence of heavy feeding or where there is continued evidence of rodent activity.

NORMAL, the volume of bait consumed will be significantly less with bromethalin baits than with anticoagulant baits. Although any one feeding will usually provide a lethal dose for mice and rats, maintain bait for at least one week to provide all individuals a chance to feed on the bait. Continue baiting until all signs of feeding have ceased.

FOLLOW-UP: Replace contaminated or spoiled bait immediately. Wear long-sleeved shirt, pants, and rubber gloves. Disposal of all dead, exposed animals and leftover bait. To discourage nestbuilding, limit sources of rodent food, water, and habitation as much as possible. If nestbuilding does occur, repeat treatment. Where a continuous source of infestation is present, establish permanent bait stations and replenish them as needed.

NOT permitted for use against the following species in California: Cotton rat, Eastern harvest mouse, Golden mouse, Polynesian rat, Meadow vole, White-throated woodrat (Mamona abigails), Southern plains woodrat (Mamona microspus), and Mexican woodrat (Mamona mexicana). This product must be used in and within 100 feet of man-made structures constructed in a manner as to be shown to be unavailable to commercial rodent invasions and/or to harboring or attracting rodent infestations. Examples of such structures include homes and other permanent or temporary residences, food processing facilities, industrial and commercial buildings, trash receptacles, agricultural and public buildings, transport vehicles (ships, trains, aircraft), docks and port or terminal buildings and related structures around and associated with these sites. Fence and perimeter baiting beyond 100 feet from a structure, as defined above, is prohibited. This product must not be applied directly to food or feed crops. Baiting with FASTRAC®-Soft Bait is prohibited.

Do not place bait near in or inside ventilation duct openings. Do not contaminate water, food, feed stuffs, food or feed handling equipment, or milk or meat handling equipment. Do not apply directly to food or feed crops. Do not broadcast bait.

WARRANTY: To the extent consistent with applicable law, seller makes no warranty, expressed or implied, concerning the use of this product other than indicated on the label. Buyer assumes all risk of use and/or handling of this material when such use and/or handling is not in accordance with the labeling of this product. In so far as achievable, seller shall not be liable for any direct, indirect, special, incidental, or consequential damage, loss or expense, including but not limited to property damage, personal injury, and pecuniary loss, caused by or relating to the use of this product.
