The performance of any marine paint or coating depends on many factors outside the control of International Paint LLC including surface preparation, proper application, and humidity. At higher humidity, the drying/immersion times will be greater at all application temperatures. Drying times are based on humidity levels of 50% RH. Drying/immersion times will vary depending on relative humidity. Micron Navigator utilizes Econea™ alongside Biolux® Technology to boost antifouling superior performance. Micron Navigator® with Econea™ delivers the proven benefits of the Micron antifouling range: long lasting, multi-season polishing protection resulting in a clean hull that resists the growth of algae, barnacles, and marine growth.

**NOTE:**
Primocon following dry times.

Prime with Gritblast or sand with medium grade (grit) emery cloth to a bright imperfections with reduced sanding; sand and wipe clean. Apply first coat of Watertite Epoxy Filler by sanding the entire surface well with 80 grit sandpaper; wipe surface clean with tap water. Apply at least 2 coats of Watertite Epoxy Filler by sanding and wiping clean. Apply at least two full coats of InterProtect 2000E by wiping well with soap and water to remove loose dirt and contamination. After the surface has been prepared as described above - apply Micron Navigator. Apply two coats of Micron Navigator following dry times below.

**PREVIOUSLY PAINTED SURFACES - GOOD CONDITION:**
Apply two coats of Micron Navigator following dry times below.

**BARE FIBERGLASS (Polyester or Vinylester):** Completely remove all old antifouling paint with Fiberglass Solvent Wash 202™. If the water beads up or separates, clean again. When the water sheets off, all contamination has been removed. Following the product label instructions. To be certain that all of the contamination has been removed, run water over the surface. If the water beads up or separates, clean again. When the water sheets off, all contamination has been removed. Following the product label instructions. To be certain that all of the contamination has been removed, run water over the surface. After the surface has been prepared as described above - apply Fiberglass Surface Prep YMA601V by scrubbing the surface thoroughly with a stiff brush using soap and water to remove loose dirt and contamination. After the surface has been prepared as described above - apply Micron Navigator. Apply two coats of Micron Navigator following dry times below.

**APPLICATION SYSTEMS**

**DIRECTIONS FOR USE**

**DANGER:**
Keep out of reach of children. Do not force feed. Do not induce vomiting. Do not give anything by mouth to an unconscious person. If swallowed: Have person sip a glass of water if able to swallow. If inhaled, move person to fresh air. If on Skin or Clothing: Take off contaminated clothing. Place under running water or wounds to rinse completely with water. If in the eyes: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Follow with a stream of clean water for at least 15 minutes. If in contact with eyes, flush immediately with water. If on the Skin: Wash thoroughly with soap and water after handling and before eating, drinking, or bathing. Avoid contact with the skin as much as possible. Avoid contact with the skin as much as possible. Avoid contact with the skin as much as possible. Avoid contact with the skin as much as possible. Avoid contact with the skin as much as possible.

**ENVIRONMENTAL HAZARDS**

• Do not allow chips and dust generated during paint removal to enter water.

**DISPOSAL**

• Contact local or regional authorities for hazardous waste disposal methods.

**STORAGE:**

• Paints should be stored in a cool, dry place away from direct sunlight. Do not store paint near heat sources or open flames.

**STORAGE AND DISPOSAL:**

• Store in the original container in a cool, dry place away from direct sunlight. Do not store paint near heat sources or open flames.
